Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,
Through Tickets from all Parts of the West,
ARE NOW SOLD IN
Cincinnati, Louisville, Madison, Indianapolis, St. Lonis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,
And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

AUCTIONEER.

HOLDS his regular auction sales of Stocks, Bonds, and other securities, every Monday and Thursday, at 12½ o'clock, at the Merchants' Exchange. First class Stocks, and Bonds, at private sale.

Office No. 4 Broad street, New York.

KENTUCKY LOCOMOTIVE WORKS.

CORNER OF KENTUCKY AND TENTH STS.

LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of St and Machinery required for railroads.

Particular attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spliting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished or short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

☞ Communications or orders must be addressed to

OLMSTED, TENNYS & PECK,
Jo.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

GUNPOWDER,

MANUFACTURED BY

The Hazard Powder Company.

HAZARDVILLE, CONN.

H. G. HAZARD, President.
A. E. DOUGLASS, Secretary.

THE undersigned are always prepared to furnish Mining and Blasting Powder to any extent, delivered at any point on the lines of railroads, or any other places of public improvements in the West or South, at the very lowest rates. Also, SAFETY FUSE of the best Eastern manufacture.

We would respectfully urge all contractors and consumers to call upon or correspond with either of us before arranging for their supplies elsewhere.

To the trade generally we would offer all the brands of Sporting and Rifle Powder manufactured by the above concern.

Myers' Patent Cylindrical Car.

NOTICE.—The Subscriber having become proprietor of MYERS' PATENT CYLINDER CAR, for a considerable portion of Western territory, including the State of Ohio, offers the same to Rail Road Companies on favorable terms. The public will be furnished within a short time with complete explanations of its operation, together with the results of actual experiments testing its applicability to all the uses for which it is recommended.

W. CLOUGH,
South-western Car Works.
Madison, Indiana. May 11.

Cincinnati Locomotive Works!

THE undersigned are prepared to furnish Locomotives equal in efficiency and durability to the best Eastern manufacture. Also, Shaping and Slotting Machines suitable for railroad shops. Also, all kinds of heavy forging and casting done at short notice. Also, bolts for bridges cut with dispatch.

ap. 20 MOORE & RICHARDSON.

ASHCROFT'S METALLIC STEAM GAUGE.

(BOURDEN'S PATENT,

THE subscribers offer for sale this valuable Gauge. It is adapted to Locomotive and other steam boilers, indicating with accuracy the continual variations of steam within the boiler, enabling the Engineer to maintain a uniform and safe pressure. Any of the Eastern Railroads may be referred to for proof of its importance and value.

BRIDGES & BROTHER,
sep.15-tf 64 Courtlandt St., New York.

WASON'S CAR MANUFACTORY,

Near the Pittsburgh R. R. Shops,

CLEVELAND, OHIO.

Passenger, Baggage, Freight, Dumpers, Hand Cars, &c.,

Of the best quality in all respects, style, workmanship, and material, made to order with promptness.

Orders respectfully solicited, with the assurance that no pains will be spared to give entire satisfaction in all cases.

CHARLES WASON,
Late of the firm of T & E. Wason, Springfield,
†oc20 Massachusetts.

Notice of Copartnership.

MR. PETER MARIE, heretofore of the firm of Decoppet & Co., has this day formed a copartnership with Mr. Rudolph Kanz, (for many years with the banking house of Messrs. L. Von Hoffmon & Co.,) under the firm of MARIE & KANZ, at 27 William street. Their attention will be devoted to the purchase and sale on commission of Stocks, Bonds and Foreign Exchanges, and to the negotiation of business paper.

THE CONTRACTORS' BOOK *of Working, Drawings of Tools and Machinery.*

The above is the title of one of the most useful and elegant volumes that we have seen. It is a compilation of the working drawings of various tools and machinery used in constructing canals, railroads, and other works; with the bills of timber and iron used in the construction of each; and also, tables and data for calculating the cost of earth and other kinds of work, by George Cole, Civil Engineer.

Experience has taught every Contractor the importance of knowing the best machinery for the purpose he may wish, and the necessity of having working drawings and proper data, for the repair and manufacture of such tools and machinery as may be necessary. This is here furnished in a simple, concise and elegant style. No Contractor or Civil Engineer will be long without such a book.

The plates are lithographed in colors, by Messrs. Compton, Gibson & Co., of Buffalo, N. Y., and as works of art reflect credit on their publishers.

The book is for sale by W. C. Little & Co., 52 State Street, Albany, N. Y., and O. G. Steele, 206 Main Street, Buffalo, N. Y.

REVIEW OF RAILWAYS—CORRECTIONS.

In making up our review of railways, it is to be expected that something may be omitted occasionally, which ought to have been said. By the kindness of distant friends, we hope to make the correction of these errors, in time for the summary, which we shall make at the end of the whole series. By the aid of Mr. J. W. Scott, and Mr. J. Smith, we make the following addition to the list for Ohio, and Indiana. We may here say, that *Hunt's Merchants Magazine*, (usually very accurate), set down a year since a list of *completed* railways in Ohio, at least 500 miles *more* than there was then made. Since then, we have finished that amount and a good deal more. This error was copied by *Mr. De Bow* into the *Compendium* of the U. S. Census, which is an injustice to Ohio, as it makes us *appear* (by comparison with the present time), to have *completed* very little in the year; whereas, in fact, we have done an immense deal. The following is the addition we should make:

	COMPLETE.	IN PROGRESS.
Erie & Kalamazoo (Ohio).....	12 miles	
Cleveland & Toledo North Branch.	110 "	
Northern Indiana, or Goshen Branch (in Ohio).....	44 ".	....24 miles.
Cleveland, Medina & Tuscarawas..		
Toledo & Illinois (in Ohio).....	..... 74 "	
" " (in Indiana).....	.....163 "	
" " (in Illinois).....	..... 8 "	
Cincinnati, Union, & Fort Wayne Railroad.....	..... 66 "	
Cleveland, Indianapolis, & Evansville (in Indiana).....	.....150 "	

In our review, we put the *Cleveland* and *Toledo* (North.) Line down, at 60 miles, terminating at Sandusky. We have authority for saying, however, that the cars are running on part, and the iron, by this time, laid on the whole.

The Toledo and Illinois Company are now running their cars to "Strycker," 44 miles from Toledo, and will be completed in a few weeks to "Bryan," Williams County. The route of this road, (which is not as generally known, as it should be), commences at Toledo, and pursues the Grand Valley of the Maumee and the Wabash, till it unites with the Illinois Central, at Danville, (Ill.) It makes points of Maumee, Napoleon, Defiance, Wayne City, Huntington, Legro, Wabash, Peru, Logansport, Delphi, La Fayette, Attica, and Danville. This will be a highly important and profitable road. It is in the hands of one of the strongest companies of the U. States, and will be completed beyond a contingency.

The *Fort Wayne* and *Union* Railroad, Mr. Smith, the President, states it is steadily progressing.

The *Cleveland, Indianapolis, & Evansville* line is well under way, from Indianapolis to Evansville.

The *Cleveland, Medina, & Tuscarawas Railroad* is under contract, and has a large amount of solid stock.

We may here say, that all those roads, we have put down, in Ohio and Indiana, as *in progress*, are really so; and that sooner or later they will certainly be completed. We had supposed that the work on the Great Tunnel at Cincinnati was suspended; but, we find, that the work has been resumed, and that it is progressing. The Short Line Company hold a large amount of valuable real estate, and although unsaleable at the present time, is a solid capital, which must soon come into play.

SALT FACTORIES IN OHIO.—POMEROY.

It is known, that in the South-eastern part of Ohio, salt water is found abundantly; but heretofore the water has been found too weak to compete successfully,—for more than local use with the salines of Kanawha, of Conemaugh, or of Syracuse. Hence the quantity manufactured in Ohio has been comparatively small. But of late, the tables are likely to be turned. The difficulty in the old wells was *in not boring deep enough.* The real saliferous rock lies, in that region, about 1,000 feet in depth. The old wells were generally dug about 400 or 500 feet in depth. They got water, but it was not the original springs, but diluted quality. Recently, however, boring has been carried to the salt-bearing rock, and salt water in great abundance is obtained, and of strength sufficient to compete with other Western salines.

The most successful experiment of this sort has been made at Pomeroy, in the vicinity of the Coal Mines. Till within the last few years, no salt wells of any consequence existed near there except one or two on Leading Creek. Some years ago, an attempt was made in boring deeper, at Pomeroy; but it was dropped before it was completed; about three years since the enterprize was resumed, and has been attended with extraordinary success. From the first well, there arose a powerful jet of water, with an abundance of carburetted hydrogen gas—which was economically used as fuel to the furnace. Since that time, other furnaces have been erected, and others are yet projected; so that this branch of manufacturing promises to be carried on there very extensively. The following is the statistical account of these salt works at the present time.

In the vicinity of Pomeroy, and on the river, there are now *four* salt companies manufacturing an average of 250 barrels, or 1,750 bushels of steam salt per day.

At West Columbia, on the opposite side of the river, and four miles below Pomeroy, there are *two* furnaces, making about 60 barrels, or 420 bushels of salt per day.

One furnace in Pomeroy, just finished, will make about 40 barrels, or 280 bushels per day.

One furnace, at the mouth of Leading, four miles below Pomeroy; and *one* at Syracuse,

four miles above, will probably be in blast by the 1st of January, 1856.

These furnaces will in all make about 3,000 bushels of salt per day, or allowing for 300 working days — 900,000 bushels of salt per annum. There is no reason to doubt, that this manufacture may be continued almost indefinitely, — and Pomeroy and its vicinity, will probably become eventually, the scene of an activity, and a business in this branch of trade equal to that at Syracuse, (N. Y.)

The depth of the Pomeroy Wells, on the river, varies from 1,020 to 1,200 feet. The water stands at from 9° to 10°. The quality of the salt is equal to that made on the Kanawha. Two of the above wells are supplied with gas, and these are the property of the Pomeroy Company.

From a well at Coal-port, there is, at times, a copious flow of Petroleum. During the first year, the Company owning this well sold about $900 worth. Most of this oil was sold at twenty-five cents per gallon to Bragg & Co., of St. Louis, and made into the celebrated *Mustang Linament.*

Excluding the two wells on the Virginia side, those on the Ohio side will make now 750,000 hushels of salt per annum,—which is worth in market about $200,000. The salt manufactured at that place, has therefore already arrived at importance.

In 1850, the total product of salt in Ohio was 550,350 bushels. As there was, then, none made at Pomeroy of any consequence, we may add the total amount to be produced in 1855, at that place, to the amount stated in the census for 1850; so that Ohio will produce in 1855, at least 1,300,000 bushels of salt, exceeding the product of any State, except those of New York and Virginia. We should not be surprized to find Ohio, in a short time, producing salt to an amount greater than that of any State.

In some places, such as Jackson and Vinton Counties, salt was made in the early settlement of the State, and abandoned on account of the weakness of the water. As the salt rock was not reached then, it is prohable, that wells bored to the same depth as at Pomeroy, will produce water equally strong. It is, at least well worth trying the experiment.

INDIANA RAILROAD.—CORRECTION.

In our statement of railroads completed, and in progress of construction in Indiana, we unintentionally omitted the Evansville, Indianapolis, and Cleveland straight line railroad, one of the most important roads in the State, now in rapid process of construction in the hands of able and energetic contractors, who have met all their estimates through the season promptly with the cash. This road is being built on the four feet ten inch Ohio guage, and will be a direct extension of the road of that guage from Cleveland, on Lake Erie, through Indianapolis to Evansville on the Ohio river, 200 miles below Louisville, there to connect with the roads to Nashville, Paducah, Memphis, and New Orleans. The line from Indianapolis to Evansville is only 150 miles in length, making the distance from Evansville to Cleveland on this line when completed only 431 miles, or about 15 hours run through the valley of White River, and the capital and heart of Indiana.

Railroads.

PITTSBURGH, MAYSVILLE, & CINCINNATI RAILROAD.

We are glad to learn from the *Morgan Herald* that this, to Cincinnati, important railroad is progressing. We have said, and still helieve, that the most important railroad enterprises will not be stopped by the finacial difficulties of the past year. They may be somewhat retarded, and their cost increased, but when the people in the sections through which they pass, are thoroughly aroused to a sense of the importance of the undertaking, and are willing to come forward and lend their best endeavors, the work must go on. This is precisely the way with the Pittsburg, Maysville and Cincinnati Railroad. The directors some time ago, wisely concluded to put under way only so much as was necessary to connect the Steubenville and Indiana railroad, and the Marietta and Cincinnati railroad, 110 miles. This would bring into direct communication with Cincinnati some of the most valuable coal and iron lands in the State, and therefore is of immense importance to manufacturing interests. The following extract, from the report of Prof. Shepherd, will convey a just conception of the value of these lands:

"Nor will the intelligent citizens of Cincinnati fail to consider, that from the line of this railway track must come the great and necessary supply of fuel, no where else so abundant or as easily mined; while other roads barely touch the coal basin, affording but a scanty supply, this road is merged in the center of the greatest line of outcrop, and capable of yielding a supply almost without limit.

"This railroad alone will render immediately available to Cincinnati the great coal beds, situated in Ward township, Hocking county, and the South-eastern part of Perry county, on Snow Fork, Sunday and Monday Creeks, together with the vast deposits of rich iron ore, surpassing the riches of Great Yellow Creek. In the section here referred to, the coal exhibits an extraordinary degree of purity, and the seams or beds above water level measure from eight to twelve, and even to fourteen and fifteen feet in thickness, overlaying one another, and forming hills and almost mountains, with intervening strata of sandstone, limestone, fireclay, iron ore, etc.

"The collected coal strata will measure from ten to fifteen yards in thickness. Each cubic yard is estimated to yield one ton of twenty-eight bushels. A mile square of this coal land, valuing the coal at one cent per bushel in the mine, is immense. Add to which the economical value of the iron ore, the productive soil, and abundant timber, more than quite equal to the coal, and we shall have an astonishing sum."

It is with pleasure that we chronicle each step in the progress of this work. A large portion of the grading is already finished between Cumberland and Washington: many of the sections could be made ready for the superstructure in a short time. On the heavier section near McConnelsville, the work is progressing as rapidly as circumstances will admit; there is a large force engaged in the tunnels and heavy cuts. There is 100 feet already excavated on the first tunnel, which has a limestone roof, and therefore will not need arching. The engineers have beeneengaged on the line west of the river, and it is hoped soon to secure local subscription sufficient to warrant putting that section also under contract.

MEETING OF STOCKHOLDERS OF THE EAST TENNESSEE & VIRGINIA R. R.

The annual meeting of the Stockholders of this Company took place according to previous notice, at Jonesborough, on Nov. 30th. Hon. Abram. McClellan, of Sullivan, was appointed President of the Convention, Hon. John Blair Vice President, and John R. Branner, of Jefferson, J.A. Gilbreath, of Greene, and Samuel D. Mitchell of Washington, Secretaries.

After the reading and acceptance of the reports of the Board of Directors, Chief Engineer, Secretary and Treasurer, the Convention proceeded to elect Directors for the ensuing year. The following gentlemen were elected: S. B. Cunningham, Sam'l. Rhea, Robt. P. Rhea, Wm. P. Reeve, A. E. Jackson, Jacob Klepper, G. W. Telford, Joseph Henderson, Daniel Kennedy, Reuben H. Davis, O. Boaz, Wm. Houston, Wm. Brazleton, Wm. H. Moffett, John McGaughey.

The following report of a Committee, appointed by the Board of Directors, to settle with the East Tennessee Stock Company, in relation to their subscription to the East Tennessee and Virginia Railroad was read and accepted.

The undersigned being a committee appointed by the Board to settle with A. E. Jackson, President of the E. T. Stock Company, and arrange and adjust such credit as they may be justly entitled to, Report that we find that the Board of Directors, on the 19th of February, 1852, passed a resolution by authority given them by resolution of the Stockholders in Convention assembled, at Greeneville, the 30th November, 1849, authorizing the East Tennessee Stock Company

to receive a credit on the subscription for whatever Bonds redeemable in stock were heretofore issued, and that may hereafter be issued for work done on our road.

We also find that Bonds redeemable in Stock, to the amount of $99,475, have been issued, and that there are now due to contractors for work actually done about $74,000, which makes in the aggregate the sum of $173,475 of Stock Bonds issued and to be issued and paid by work done.

The remaining indebtedness of the Stock Company up to this date being $157,550, there would be an excess of Bonds issued and to issue of about $15,920 after fully liquidating the balance due from said Stock Company, which amount goes to the increase of the Capital Stock. We therefore ask that the Secretary be directed to place to the credit of the East Tenn. Stock Company, the sum of $99,475 for Stock Bonds issued, and as the Bonds paid for in work are issued, they shall be placed to the credit of the East Tennessee Stock Company, until the balance of the subscription of said Company is fully paid. All which is respectfully submitted to the whole Board. Signed, A. E. JACKSON,
Pres't. E. Tenn Co.

JOHN McGAUGHEY, Chairman.

WM. HOUSTON,
} Committee.

November 29th, 1854.

The next Convention will meet at Jonesborough, on the last Thursday of Nov., 1855.

MAYSVILLE AND LEXINGTON RAILROAD.

Our readers will remember that owing to the inability of this unfortunate road to meet the payments of interest on its first mortgage bonds, sometime about the 1st of November, Mr. E. Miller was appointed by the Fayette Circuit Court as a receiver to take charge of the finished portion of the road, for the benefit of the holders of the bonds. The appeal from this decision has been recently decided in the Court of Appeals against the Company. The following is the opinion of the Court as delivered by Judge Simpson :

This Court has appellate jurisdiction over only final orders and judgments. A final order decides some matter litigated or divests some right in such manner as to put it out of the power of the Court, after the expiration of the term, to restore the parties to their original condition. This order does not have this effect. It is temporary in its nature, and entirely within the control of the Court that made it. It is, therefore, not final. It is merely provisioned under section 329 of the Code of Practice. This Court has no appellate jurisdiction over it.

Appeal dismissed.

In consequence of this decision, the road between Lexington and Paris passed into the hands of the Receiver, and was subsequently leased to the Covington and Lexington Railroad Company for 18 months. By the conditions of the lease, the Covington and Lexington Company will pay $1250 per month for the use of the road, and themselves expend the rent of the first five months in putting the road in perfect running order. They intend to proceed at once to arrange the guage to suit their own, so that they will soon be able to run a train the whole distance without break of guage.

THE WIRE BRIDGE ON THE LINE OF THE LEXINGTON AND DANVILLE R. R.

The completion of the towers designed for the suspension of the cables of this magnificent structure, was celebrated on December 2nd. At the point at which the road crosses the Kentucky, the river is lined with perpendicular cliffs of limestone 275 feet in height, and is twelve hundred feet in width. The bridge to be thrown over this tremendous chasm, will be the most magnificent structure of its kind in the world. The bridge at Pittsburg is of about 1000 feet span, and that over the Niagara is only 800 feet. Each of these in its turn has commanded and still commands the admiration of the traveler. But the noblest of them all will be that across the deep gorge of the Kentucky river.

The towers are erected almost on the extreme edge of the cliffs, and rise in the form of graceful pyramids to the height of ninety feet above the cliffs on each side of the railroad track. They are joined together at the top, by an arch of masonry, and still further strengthened by iron bars inserted in the whole. The towers are capped by a massive bed plate of iron, on which rests the saddle plate of iron on steel rollers. The anchors are three hundred feet from the towers, and are very strongly secured by immense bodies of masonry. The cables are to consist of 4,600 strands each, of No. 9 wire, each strand capable of sustaining a weight of 1500 lbs., thus making in the aggregate a capacity to sustain a weight of 6111 tons. The greatest weight the bridge may be expected to have to bear, would not exceed 300 tons. The whole will be so stayed in every direction, as to prevent danger from the swaying of the road-way either laterally or horizontally.

Our neighbors of Kentucky have our best wishes for the early completion of this vast undertaking.

CENTRAL MILITARY TRACT RAILROAD, ILL.

OPEN TO GALESBURG.

The Central Military Tract Road is at length completed, and trains have commenced running in connection with the Aurora Road over the entire distance from Chicago to Galesburg, a distance of eighty-five miles. There now remain but eighteen miles to be laid, when the road will be completed to Burlington. This will probably be finished during February next.

In regard to this, the Chicago *Press* says : "We have repeatedly spoken of this road, and of the magnificent country which it penetrates and brings into direct business connection with our city. The region of country lying between the Illinois and Mississippi river, is not surpassed in fertility or loveliness by any other portion of the State. The Central Military Tract Road with its connection, the Northern Cross, divides this region longitudinally, from Mendota to Quincy, occupying the high table lands which form the divide of those rivers, the entire distance. Whoever has passed over it cannot but believe that it will soon attract thither a dense and active population.

"In a few weeks more the 'Peoria and Oquawka' Road will be completed from Burlington to Galesburg, and this will give us our fourth connection by rail with the Mississippi. Near the same time the Illinois Central will give us the fifth at Cairo."

Selected Railroad News.

CENTRAL OHIO RAILROAD.

Resolutions adopted by the Board of Directors of the Central Ohio Railroad Company at Zanesville, Dec. 14, 1854.

Ordered: That the Committee appointed to confer with the authorities and citizens of Wheeling, and Railroad Companies whose lines converge upon or near that city, be instructed to report at the next meeting of the Board, what proposition that city or its citizens are prepared to make in the matter of a railroad bridge at or near Wheeling; and that if no definite proposition be made, the Committee be excused from further action in the premises ;

That if the city of Wheeling or its citizens shall subscribe to the stock of this Company a sum sufficient to cover the expense of land damages, graduation, and bridging, and superstructure estimated for the road between Bellaire and Kirkwood, this Company will immediately extend its line to the said town of Kirkwood ;

And, also, that this Company is now willing, as it always has been, to unite upon equitable principles, with the other companies having roads terminating near Wheeling, in the construction of a railroad bridge at any eligible point between the lower end of Zane's Island and Bellaire, and over said bridge to extend the line of this road into the city of Wheeling—there to unite with the Baltimore and Ohio and Hempfield roads; but that no proposition for a concession of our chartered right to connect with the Baltimore and Ohio or any other railroad at such place or places as this Company may deem expedient, will or can be entertained.

DELAWARE AND SPRINGFIELD RAILROAD.—Trains are again running on this lately deserted road. A passenger train leaves Springfield for Delaware, daily, returning also daily. The Directors of the line are bound their stock and interests shall not become defunct, and whether it pays or not to run, a train will be kept "grinding." It is proposed to put on a train to run from Cincinnati through to Delaware — using the Little Miami Railroad as far as Springfield. This, however, will not be done for the present.— *Com. Reg.*

MEMPHIS AND CHARLESTON RAILROAD.

We are enabled to lay before our readers a few facts touching the present condition and prospects of this great work, in which our city is so deeply interested in every point of view. The directors of the road have had to struggle through a season of unusual difficulty and depression, and we are truly pleased that they have been able to pass through with comparative success, when almost all Southern enterprises of the kind were seriously interrupted. The stringency of the money market and the difficulty of cashing even good securities without a heavy discount, have borne peculiarly hard on roads in progress for the last six months and nearly all have been forced to suspend operations.

Of the Memphis and Charleston Road 108 miles are in operation, and 83 miles in addition completely graded, which connect Decatur with Stephenson, Alabama.

The bridge at Decatur is near completion and only awaits a favorable stage of water in the Tennessee River to procure the timber and iron needed. The track laying will then commence at each end of this section, and be carried on as speedily as possible, when there will be a continuous road of 127 miles, connecting Charleston via the Nashville and Chattanooga Road, with the rich and populous basin of the Tennessee as far westward as Tuscumbia.

The Nashville and Chattanooga Company have also twenty-five miles ready for the iron, which will soon be laid eastward from LaGrange to which point the track is completed. There will then be completed on the western division seventy-five miles, and on the eastern one hundred and twenty-seven on the main track, exclusive of a branch of thirteen miles—all of which will be in operation in time for the next season. The iron necessary for this extent has been purchased, and much of it already delivered. A small amount of first rate securities will be negotiated to meet the cost of freight and duties ; but the Company are provided with means for all other demands. After this, there will only be a gap of seventy miles in the centre which will be filled up as fast as can be done safely and certainly, under the existing state of the money market.

The bridge over the Tennessee River at Muscle Shoals will be two thousand feet long. There are thirteen piers of immense and heavy masonry, which have been completed on a solid rock foundation. The wood work is going on, and the work will be ready to receive the iron in January.

We may, therefore, reasonably expect that by the first of October, 1855, we shall have a direct Railroad connection with Tuscumbia.—*Charleston Courier.*

Opening of the Opelika Road.—We are glad to learn says the Alabama *Journal*, that the Opelika branch of the Montgomery and West Point Railroad, will start its first trains today to Wellsburg, about 14 miles. The iron for the remainder of the route, we are informed by Mr. Jones, the superintendent, is received and is being laid rapidly, and the track will be completed to the temporary depot, about a mile from Columbus, by the middle of January, at that time our neighboring city Columbus and Montgomery will be in connection, and we have no doubt that the union of the valley of the Chattahoochee, and the Alabama will be celebrated with becoming ceremonies and hospitalities. We hope to be able to take by the hand divers of our genial Columbus acquaintances on the pleasant occasion.—*Selma Reporter.*

SUPERIOR COURT OF CINCINNATI.

BEFORE JUDGE GHOLSON.

Monday, November 27th.

Cranston and Folmer, vs Cincinnati, Hamilton & Dayton Railroad Co.

This was an action to recover damages for several cows killed by a locomotive of the defendant, which was run against and on to them while they were upon the track of the road.

The plaintiffs keep a dairy several miles from the city, having a large number of cows which are pastured contigious to the road of the defendant. The accident occurred upon the passing of the passenger express train, between 10 and 11 o'clock, A. M.

The facts as found by the Court from the proofs, were these : that the train was going at the rate of about thirty-five miles an hour, which was its usual speed, and that it could not be stopped within a distance much less than a mile.

That the cows on the track could only be seen some three or four hundred yards, owing to a curve in the road; that the danger to the train from collision with cattle moving upon the track, was much greater when the train was going at a slow, than when going at a very rapid rate ; and that the only effort to avoid the destruction of the cows was the blowing of the whistle, as to which, it was not shown clearly at what time it was sounded.

It was claimed for the defendant that the cows were trespassing upon the road, and that therefore there could be no right of recovery for killing them.

Upon this much contested and very interesting question of the liability of Railroad Companies, the Court pronounced a very elaborate decision, reviewing most of the cases reported in referrence to the liability in such cases.

Judge Gholson held that the mere fact of animals being wrongfully upon the track of the Railroad, did not place them beyond the protection of the law, nor exonerate the defendant from all care in respect to their safety and protection. It was undoubtedly the duty of the defendant and its officers, to have regard, first, to the greater interests of property and life involved in the safety of the train, but, if, without jeopardizing these, the defendant could, with reasonable care, which must be determined from the circumstances of every case, secure also the preservation of the plaintiff's property, it was the duty of the defendant so to do.

In the present case, it appeared that after the cows were in sight the train could not be stopped before reaching them, and to diminish its speed would enhance the danger to the train, it was not, therefore, the duty of the engineer to attempt to stop it.

If there was any negligence in the engineer, it was in not blowing the whistle soon enough, and it was not satisfactorily shown to the Court that there was negligence in this.

The burden of proving negligence or want of care, lay with the plaintiff, and in the absence of such proof it would be presumed that the officers of the defendant did their duty.

Judgment for defendant. Van Hamm for plaintiff, Worthington & Matthews for defendant.

Sandusky L. & N. A. R. R.—The work on this Road is progressing satisfactorily on the South end of the line.

TERRE HAUTE AND ALTON RAILROAD—PROGRESS OF THE WORK.

The division of the Terre Haute and Alton Railroad from this city to Litchfield, a distance of about forty miles, is now in the hands of the Company, and is formally opened for the accommodation of the public. Regular trains for passengers and freight will commence running on the road on this day. They will, we understand, for the present leave the foot of Henry street at 10 o'clock A. M., upon the arrival of the boat from St. Louis, and reach Litchfield at noon, connecting there with hacks to Hillsborough. Returning, they will leave Litchfield, at 3 o'clock P. M., and arrive here about 5 o'clock, in time for the evening train for Chicago, or the night boat for St. Louis. Due notice of the running of the trains will, however, be officially published in a day or two.

In regard to the other portions of the road, we have received from Capt. Barnes, several items of information, which will be interesting to our readers. He states that it is the intention of the Company to push the work on to completion just as rapidly as money and labor will accomplish it. Large forces are now at work at all the principal points on the line , and these will be increased whenever additional men can be employed to advantage. The track-layers have now reached a point about four miles east of Litchfield, and the embankment in the bottom of Shoal creek is nearly ready for the superstructure. It will be but a short time before the road will be opened to Hillsboro, the gap to be filled now being only about eleven miles.

From Hillsboro to the junction of the Illinois Central Road, the distance is about twenty-eight miles, twenty of which are now ready for the rails. It is the intention of the Company to ship the iron from Chicago by the Central Road to the junction, and to lay it toward Hillsboro. That portion of the road will be laid with iron by the first of February.

Upon the eastern end of the road, the work is also progressing with commendable activity. The track from Terre Haute westward, is laid to Grandview, a distance of thirty miles, and regular trains, twice a day, are now running upon it. The distance from Grandview to the junction of the Chicago branch, of the Illinois Central, is about thirty miles ; and at the rate at which the work is now going forward, it will be reached early in March. The rails for this section will also be received from Chicago by the Central road.

The remaining part of the road embraced between the two branches of the Central road, is not in so forward a state as the other portions we have mentioned. It is intended, however, that the work shall progress toward Shelbyville from both ends simultaneously, and that the track shall be laid through by June, excepting about seven miles of heavy work in the Kaskaskia river bottom. It is expected that the entire road from Alton to Terre Haute will be complete and ready for the cars by the first of next July ; on which occasion a glorious excursion may be anticipated.

The completion of the Terre Haute and Alton road will make a new era in the history and progress of Middle Illinois. Forming as it will the shortest and most direct *route* to the cities of the Eastern seabord, it must necessarily command a very large proportion of the travel and traffic of this part of the

country. The through business of the road, however, will not compare with the local traffic, which it will create and sustain. Every mile which the road traverses is capable of a high cultivation, and will produce in the items of wheat, corn, and other products, such a business as we now little dream of. Its completion will likewise open up wide farms, bring in population to the fertile prairies, and give renewed impetus to the advancement of the country through which it runs. It will be the commencement and the herald of a new epoch; and the long trains, as they vibrate like pendulums across the State, will hasten the coming of the time when Illinois shall rank in the scale of intelligence, wealth and resources, with the first of her sister States.—*Alton Telegraph.*

BALTIMORE AND OHIO RAILROAD.

Yesterday, the day for the regular monthly meeting of the Board of Directors of the Baltimore and Ohio Railroad Company, was the time fixed for the election of President.

Previous to going into the election a question arose whether the city was entitled to an additional director, the council having elected Mr. Andreon on the ground that the city was entitled under dividend stock to another director.

A motion was made to refer the question to the counsel of the company (J. H. Latrobe, Esq.,) and that in the meantime the gentleman appointed be not authorized to take a seat. This motion was debated at length, and was lost by a tie vote—ayes 15, nays 15. Mr. Andreon then took his seat at the board.

The Board went into the election for President, when on counting the ballots, they stood:

William G. Harrison	16
Chauncey Brooks	14
Columbus O'Donnell, Esq.	1

William G. Harrison was thereupon declared to be elected.

The subject of the coal freights was not opened at the meeting, but a special committee was appointed to inquire into all practicable and proper steps for reducing the expenditures and outlays of the company, who will report probably at the meeting in January.—*Baltimore Patriot.*

COMPLETION OF THE WHEELING CREEK HEMPFIELD RAILROAD BRIDGE.—We were present yesterday at the ceremony of placing the Keystone in the last arch of the magnificent bridge of the Hempfield Railroad, across Wheeling Creek, in the boundaries of the city. This, like all other work on the Hempfield Railroad, is a specimen of the finest work. It is a bridge of five arches, of substantial, symmetrical and beautiful workmanship. Mr. WM. OTTERSON, the chief contractor, and Mr. W. C. SMITH, chief engineer of the road, have accomplished almost an unprecedented feat in the erection of this bridge, having placed over 1000 perches of stone in it, and presented it to the public in a completed condition, within two months. With such work, with such workmen, with such talent and energy, the Hempfield must succeed beyond the most sanguine hopes of its friends.—*Wheeling Intelligencer, Dec. 22.*

JAMES RIVER & KANAWHA COMPANY.—The Board of Directors on Monday last, appointed Mr. Edward Lorraine, Chief Engineer of the James River and Kanawha Company.

☞ We learn from the Columbus *Times* that a vote was had in that city on Monday week last, as to the propriety of making a further subscription of $150,000 to the Mobile and Girard Railroad, and of $50,000 to the Montgomery and West Point Railroad. Both propositions were sustained by large majorities, and the city Council, on Monday night, met and ratified the action of the citizens as expressed in this election. "We are happy, to announce, (says the *Times*,) that the city of Columbus has made a further subscription of $150,000 to the Montgomery and West Point Railroad.—*Selma Reporter.*

ALABAMA AND FLORIDA RAILROAD.—At the recent letting, on the 4th inst., says the Alabama *Journal*, of the Alabama and Florida Railroad, we learn that the first fifty miles was at once placed under contract and taken by a body of experienced and energetic contractors. The contracts stipulate for the completion of the first twenty-five miles during the year 1855.

The time for breaking of the ground at this point is not yet determined—when arranged we will give due notice of the commencement of this important enterprise.—*Selma Reporter.*

ILLINOIS CENTRAL RAILROAD.—This road, it appears, notwithstanding all that has been said at home and abroad about the improbability of its being finished to Dubuque for three or four years to come, is to be in active operation next spring, and contracts may now be made for the transportation of freight from Dunleith to Cairo, or any intermediate points on the line of the road. The Illinois Central once finished to Dubuque, we shall entertain strong hopes of the commencement of a Western Road, having for its termination, not simply the Missouri River, but, with an ambition commensurate with this age of progress, it will be rapidly extended across the prairies that divide the Missouri from the shores of the Pacific and the gold placers of California. Upon the beginning of this Western Road depends the greatness of Dubuque. Its rapid rise and future magnificence will date from the accomplishment of that event, and can only be brought about by the determination, energy, capital, and credit of Dubuque properly invested.—*Dubuque Observer.*

THE BIG TUNNEL.—The cars on the Steubenville and Indiana Railroad, will pass through Kelley's Tunnel, section 42, on and after today. The Steubenville *Herald*, says that this will very materially facilitate business and travel on the road.—*Cin. Gaz. Dec. 25.*

COVINGTON AND LEXINGTON RAILROAD.—At the annual meeting of the stockholders on the 13th inst., the following gentlemen were elected Directors for the ensuing year: M. M. Benton, J. B. Casey, J. T. Levis, C. A. Withers, John Chowning, Augustus Robbins, T. J. Garnett, Garrett Davis, and Edward Oldham. At a subsequent meeting of the Board, M. M. Benton was elected President, C. A. Withers, Vice President, S. J. Walker, Treasurer, and F. Wise, Secretary.

ALABAMA AND FLORIDA RAILROAD.—We see by the Montgomery papers, that the company at Montgomery, give notice for proposals for the Graduation, Masonry and bridging of sixty-seven miles of the Alabama and Florida Railroad, extending from Montgomery in the junction of the Sepulgah and Persimmon creeks in Conecuh county.

FRANKLIN & WARREN R. R.

A meeting of the Stockholders of this Company was held at Franklin, on Nov. 23d. The object of the meeting was stated by the Chairman to be to lay before the Stockholders of the Eastern Division, the financial condition of this section, believing that the statements which the Board would be able to present, would be an inducement for each subscriber to come forward and pay up the amount due, and thus enable the Board to complete and put in running order that part of the road from Akron to Warren within the next twelve months.

Dr. Earl and J. W. Tyler read to the meeting (accompanied with practical suggestions) a statement from the Secretary of the Company, showing the amount due and uncollected by Akron and Windham, inclusive from stock subscribers, to be $197,811, also an estimate from D. C. Shepard, engineer, showing that the above amount was more than sufficient to cover total cost of the work (less cost of iron) between Akron and Braceville Ridge.

A Committee was appointed to prepare resolutions, and reported the following which were adopted.

Whereas, The present embarassed condition of monetary matters, makes it difficult for most of the subscribers to the capital Stock of the Franklin and Warren Railroad, to meet promptly the payment of their instalments; some are withholding payment under the erroneous supposition that the pressure of the times will cause a suspension of the work, therefore,

Resolved, That we have full confidence in the ultimate completion of the Franklin and Warren Railroad, and we would urge upon each and every subscriber the importance of promptly paying up his subscription as fast as the same shall become due.

Resolved, That we have the fullest confidence in the management of our Directors—and the financial condition of this Division of the Road, as shown by statements and the books of the Company, this day exhibited, entitles them to the confidence of all the Stockholders.

Resolved, That the Directors are hereby instructed and required to push forward and complete that portion of the Road from Akron to Warren, and stock the same as soon as practicable. And we hereby protest against any suspension of the work, as detrimental to the best interests of the Road, as well as injustice to paying subscribers.

PITTSBURGH & STEUBENVILLE R. R.—The Steubenville Herald says:—This road is, we regret to learn, partially suspended, for the want of funds. The road has been almost entirely under the control of Pittsburghers, who have not exhibited much energy in constructing it. The road could have been built a month ago, when funds were more easily procured, but it was permitted to lag, and the consequence is, owing to the stringency of the money market, it is not likely to be completed before this time next year.—*Wheeling Intelligencer, Dec. 22d.*

Miscellaneous.

NEW EAST INDIA COMPANY.

It is worth while perhaps to mention the important and interesting fact that for several weeks there has been discussed in private circles in St. Louis the scheme of organizing, in this city, a company to open a direct trade between St. Louis and China, the isles of the Pacific, and the Pacific seaboard. The name at present suggested for the company is the one given above—the New East India Company—and it is not risking much to predict that the operations of the Company will, in time, make as great an impression on the commerce of the world, and the power and destiny of races, as its great prototype of England, now ruling so large a portion of Southern Asia. We are prepared to state that the names and influence of citizens are already pledged to the scheme sufficient to ensure it an imposing introduction to the list of the great schemes and gigantic enterprizes of modern times.

It is not necessary to go very fully into particulars at this time, in regard to this matter. Suffice it to say, that the first step proposed is a simple and practical one. It is the immediate establishment of *a semi-weekly overland stage and transportation line* between some point on the Missouri river—say Kansas—and the Pacific ocean. The termini, as well as the route, to be determined by the company after it is organized.

Some few calculations have been made of the cost of the preliminary operation, and it is thought that such a line of semi-weekly transit across the continent can be established and maintained a year on a capital of $500,000, with all the conveniences and personal comfort that are to be had on any great stage line in the States. It is contemplated to have permanent stations, not over thirty miles apart along the whole route, with all the conveniences of entertainment for man and beast, that will make travelling across the Rocky Mountains quite as secure and agreeable as it ever was by stage across the Alleghenies.

The sources of revenue to the company will be stage fare from persons who will like this novel mode of crossing the Rocky Mountains, mail contracts from Government, transportation of gold dust, and finally of teas, silks, and spices from China and Japan.

We will give our readers more of this in a day or two. Let them ponder this matter well. The day of the realization of the dream of enthusiasts since the voyage of Columbus, seeking a *Western* road to "the East," is now fully at hand. *We are the people to make plain that paradox of four centuries.—St. Louis Intel.*

COPPER MINES IN PAULDING COUNTY GA.

From reliable sources, we learn that some six or seven mines of undoubted richness, and apparently inexhaustible, are being opened, in the neighborhood of Dallas, Paulding County. Some of them will have ore ready for shipping in a few weeks — others not so far advanced, in a few months. We understand that the farthest one of these mines, is not more than forty five miles from Atlanta; and that the parties engaged in working them, are disposed to wagon their ore here, in preference to hauling it to any point on the State Road above. We are told, (and our own knowledge of the facts confirms the statement) that the only obstacle in the way of our neighbors in Paulding, is the crossing of the Chattahoochee. It is estimated by persons connected and intimately acquainted with mining operations in that county, that within six months from this time, it will require the services of from two to three hundred wagons and teams to haul the copper ore to the Rail Road; and it is feared that the slow process of crossing all these teams and wagons at a ferry, as well as the danger, which is always more or less, will compel those interested, to haul their ore to some point on the State Road, west of the river.—*Atlanta Republican.*

BIRKENHEAD.

We are in receipt of the 3rd number of the Birkenhead *Guardian*, the first paper established at Birkenhead, opposite Liverpool, on the Mersey. The paper is of good size and conducted with evident ability. To us, on this side the water, it seems strange that a town containing 50,000 people, should ever be without a paper. It is accounted for by the overshadowing influence of Liverpool, of which it forms a sort of suburb, as Brooklyn does to New York, and its interests are sufficiently represented by the papers of the large city.

Speaking of the progress and prospects of Birkenhead, the *Guardian* says:—

There are many reasons why the town of Birkenhead should continue to progress until it attain a degree of importance, the extent of which we will not venture to predict.—There is no advantage enjoyed by the town of Liverpool which we have not equal means to obtain on this side. Our railway communication with the rest of the kingdom is in many respects better, because more accessible, and as we endeavored to point out in our previous article with reference to the surrounding neighborhood, the balance of advantages is all on the Cheshire side. When the celebrated engineer, Mr. Telford, stood on Bidston Hill, he exclaimed that Liverpool had been built on the wrong side of the Mersey, and any one who is at all acquainted with the locality must be of the same opinion; for while millions have been expended in order to afford dock accomodation to Liverpool, a far greater amount of dock and quay room could be obtaiued on the Cheshire side at one-tenth part of the outlay. Indeed, comparison is out of the question.

Birkenhead has, moreover, the singular advantage of being altogether a new town, and has, therefore, none of the remains of old times to be cleared away before effecting any improvements. It stands an exception to every large town in the kingdom, and presents a more astonishing instance of rapid growth, than even any of the marvellous cities of the United States. Within the memory of many it had scarcely an inhabitant, and now it numbers its population by tens of thousands. This is, however, the least of its attractions. With extraordinary judgment and foresight, the land, while yet virgin soil, was laid out in broad, straight roads and streets, well paved, efficiently drained, and unrivalled for convenience of intercommunication. With very few exceptions the houses have been built according to the most approved modes for the comfort of the inhabitants, with lofty rooms for ventilation, and such effectual regard for safety that a house on fire is almost unknown. The supply of water and gas is abundant in quantity and excellent in quality, and no legitimate want for comfort and convenience is left unsatisfied.

This town is the result of the exertions of the Hon. William Jackson, M. P., one of the contractors on the Grand Trunk Railway, and where he resides. By the new reform bill, proposed at the last session of Parliament, Birkenhead was to be allowed a member. Its progress has excited the most intense jealousy of Liverpool.

TEXAS PENITENTIARY.

It seems, from the annual report of the Penitentiary Directors, submitted to the Governor on the 31st of September last, that the State Prison of Texas, unlike those of most Southern and Western States, is now more than paying expenses. This speaks well for the judicious management of the officers of that institution. We find, in the Huntsville *Item*, the following statement of the condition of the financial affairs of the institution, taken from the report above alluded to:

October 1, 1853, to September 30, 1854.

Gross expenses		$20,774 34
Contra.		
Work made and sold	$ 4,049 15	
Sundries on hand, bt. within the year	4,626 68	
Convict labor on building	13,478 95	
Balance in favor of Pen'tiary		1,980 64
	$22,754 98	$22,754 98

Gross amount received by agent from all sources on special account of the Pen'try	$23,946 04
Amount disbursed by him	20,202 40
Balance on hand	$ 3,744 64

SURPLUS MONEY—HELP FOR OUR R. R.

From a source that we deem reliable, we learn that the balance of unappropriated money in the State Treasury of Missouri, will amount to 400,000 at the close of the present year. If this is so, Gov. Price's message will show the fact, and the Legislature will have to take action in regard to it.

One of the curses of this country is the accumulation of gold in the National and State Treasuries. There is now in the National Treasury about *twenty-six million dollars* of coin that is doing no good to any human being save those who are paid to watch it. Missouri has near $400,000 hoarded up, equally useless. This is an outrage on the people—taxing them for gold for government officials to hoard. Let all taxes be reduced, or let the money that is collected be applied to some useful end.

We propose, if Missouri has so large an amount as $400,000 of surplus cash on hand, that she lend the same in sums of one hundred thousand dollars each, to the four great Railroads of the State for twenty years, instead of an equal amount of Bonds, which she is now by law pledged to advance. They *can* use the cash, and in this way the cash will return to the people, paying them for labor, provisions, ties, and all other articles required in building the roads. The Pacific, the Iron Mountain, the North Missouri, and the Hannibal and St. Joseph Roads, would feel sensibly the impulse of so much ready cash.—*St. Louis Intel.*

CANAL TOLLS.—The total amount of canal Tolls in N. Y. received up to Nov. 22, 1854, was $2,706,432. In the corresponding period of 1853, it was $3,132,914. Decrease this year as compared with last, $426,482.

TABLE OF RAILROAD BONDS, WITH MARKET VALUE.

Monetary and Commercial.

There has been a somewhat increased demand for money during the past week. The half yearly settlements drawing near, all parties have begun in earnest to make preparations before the first, benee we have renewed complaints of stringeney in the market.

The discount bouses are still unable to accommodate their customers to any extent, and outside capital can find active employment at rates ranging from 1 to 3 per cont. Hopes are entertained that after the first of January matters will be seriously cbanged for the better. Houses that can command money at all will pay up promptly and these amouuts scattered, will give some temporary ease.

The most interesting event of the week, however, is the decided prospect of a rise in the river. We bave hitberto had some appearanees of a rise, wbich subse quently proved deceptive; but the present storm has been accompanied by a soutb east wiud, and has extended over a large extent of country, and the river already gives indieations of its effects. Preparations are making for the shipments of mauufactured artieles, which are destined for the soutb and south west. If this is aceomplisbed, it will bring to Cincinnati nearly a million and a half of dollars, whicb will be tbrown at once into the active business of tbe city.

We hear of some manufacturing establisbments whieh bave been closed for the past two months, tbat are making active preparatious to reopen. There has been a decided scarcity of Eastern Excbange, which has been much sought for by eorporations and companies to pay their semi annual interest in New York. We therefore quote exchange firm at the prices notieed in our last. There has been some sold in limited quantities at 1 per cent; but the general rates are 1¼ selliug, and ¾ per eent buying. Gold is buying at ½ to ¾ and selling at 1 to 1¼. Transactions in stocks continue to be limited, and at prices somewhat lower than former quotations for cash sales. Exchanges are made on the basis of former sales or a fraction higber. Dayton and Western has improved two per cent. since former sales.

Our adviees from the East are of an encouraging nature. The bank returns for tbe weeks ending December 9th and 16tb, are as follows:

Loans Dec. 9	$80,593 637
" " 16	80,946 664
Increase	$ 353 027
Specie Dec. 9	10,483 501
" " 16	11,471 841
Increase	$ 988 340
Cirenlation Dec. 9	7,480 833
" " 16	7,261 111
Decrease	$ 219 722
Deposits Dec. 9	60,278 866
" " 16	61,367 098
Increase	$ 1,088 232
Average clearings Dec. 9	17,160 271
" " " 16	17,032 414
Decrease	$ 127 857
☞ Actual Deposits Dec. 9	43,118 595
" " " 16	44,334 684
Increase	$ 1,216 089

☞ The increase in specie will thus be seen to be $988,340, for the week ending Dec. 16; it is supposed it will be still greater for that ending Dec. 23.

There has been quite a panie among tbe depositors in Savings' Banks and in conseqnence, some of tbese institutions converted their United States Stocks into gold, wbich bas thus found its way into tbe bands of tbe depositors, and is now undoubtedly, mostly boarded up. During the past three weeks tbere has arrived in New York, according to the New York *Economist*, $2,867,000 in specie more than has been exported, and in the same time the quantity in the Sub-Treasury bas diminished $1,100,000, of tbese amounts the banks still hold $1,000,000. Hence $2,963,000 in bard gold bas fonnd its way into circulation.

There is an improved feeling as to stocks in general. It is generally believed taat onr roads are in a sound condition.

☞ The *Selma Reporter* says, that the North-eastern and South-western Alabama Railroad is bound to go ahead. Of the $200,000 to be raised by Sumter, all is subscribed, except five thousand, and the friends of the road in that county guarantee the raising of that small amount. Every prominent railroad in the State, we are proud to say, hard as the times are, is now in a fair way of being speedily completed. For the Alabama and Tennessee River Railroad it seems more difficult to raise means than for any of the others, owing to the lukewarmness and timidness of many who should have stepped forward at once in aid of the road. But the means, we have no doubt, will be speedily raised, and the iron courser will shortly slake his thirst in the waters of the Tennessee.

HOG KILLING AT LOUISVILLE.—We have arrived at such a stage in the hog killing seasonas to be enabled to form a somewhat definite estimate of the crop and its product.—There can be no doubt of a large deficit as compared with the operations of last year. The packing of the season of 1853, '54, was in round numbers 407,000 hogs, and the average weight 215 pounds, giving as the aggregate weight, say, 407,000 hogs of 215 pounds each 87,505,000, pounds. The packing for this season 1854, '55, will not exceed 270,000 hogs, and the average weight will not exceed 190 pounds, giving the aggregate, say 270,000 hogs of 190 pounds each is 51,-300,000, or equal to 183,000 hogs of 200 pounds each.

The result in *Prime Lard* may be stated thus: The season of 1853, '54, with 407,000 gave an average of 27 pounds prime lard per head, say407,000 hogs average 27 pounds is 10,889,000 pounds—the season of 1854, '55, with 270,000 hogs and 19 pounds to head is 5,130,000 pounds, leaving a deficit in pure lard of 5,759,000.

These figures may be relied on as very nearly correct. They exhibit a deficiency in *meat* of upwards of *forty* per cent, and in *prime lard* of *fifty* per cent. The deficiency in interior pointe in this State and in packing points in Tennessee will be much greater.

The packing on Green, Barren and Cumberland rivers is now closed, and the falling off, as compared with last year, is fully 65 per cent. and may prove 75 per cent. in pounds. At Bowling Green, in Waren, and at other points as compared with last year, foots up thus:

	1854, '55.	1853. '54.
Bowling Graen and county	6,000	20,000
Clarksville and Trice's Landing	7,000	15,000
Nashville	nothing	13,000
Canton	2,500	6,200
Total	15,500	54,200

There will also be a corresponding decrease in weight.—*Louisville Courier, Dec. 22d.*

STATISTICS OF THE PRODUCTION OF IRON IN THE NORTH OF ENGLAND DISTRICT.

Messrs. Baily, Toms & Co. of London, in reference to the above interesting subject, write as follows:—

It may be interesting, if not indeed necessary, in order to correct the extravagant and delusive estimates current respecting the production of iron in the counties of Northumberland and Durham, to publish the undernoted statement, furnished by reliable authorities, of the actual position of the make of iron in that district, which we believe will be found accurate.

It will thus be seen that we have a total output, from English furnaces North of the Humber of about 346,000 tons a year of pig iron, instead of the *imaginary* quantity of 500,000 tons, so easily arrived at on paper, but not so readily produced in point of fact, while colliers are being paid one shilling per hour for their labor. You will perceive that the furnaces called into existence by the Cleveland iron-stone, of which so much is now said and written, but the quality of which is understood to vary considerably, are marked C in the list; and you will find them 29 in number.

Many of the old furnaces eousume Cleveland stone, a circumstance in no way affecting the total output, because they would have produced as many tons of pig-iron from other stone, and did so, we apprehend, for many years before this discovery, while several others in the list never avail themselves of the Cleveland stone at all, their position rendering other stone more economical. It, therefore, follows that in any calculution of the actual result upon the market, from the discovery and utilisation of this mineral, we are only bound to take into account at present the output of these 29 furnaces marked C, which, taken at an average to produce each 130 tons, gives a total of 3,770 tons per week, or under 200,000 tons per annum. Before presuming even upon this supply of pig-iron coming forward, we must not forget the contingency of getting coal in anything like a sufficient quantity to keep the furnaces going, inasmuch as several now in blast have had their make curtailed considerably from the difficulty in question, one rather likely to increase than to diminish. Certainly, by the aid of magic, speculators' brains may make iron very fast, when it is though tadvisable to "bear" the market; but unfortunately the metal thus eliminated is not of a kind that will serve, either to encase with "armed mail," four inches thick, the FLOATING BATTERIES, destined to go under the walls of Cronstradt, or to constitute that better bond of railway communication, that we may hope is yet to encircle and civilize a world at peace. G. BAILEY, TOMS & Co.

BASSWOOD PAPER.—The article has come. It is before us—three qualities of it. One almost good enough for a newspaper, (quite good enough for the *Washington Union*, altogether too good for that scoundrel journal the *N. Y. Herald*,)—the other better than most of the paper *The Democracy* had to put up with—and the third a strong, smooth, even sheet, fit for promissory notes—nay, for love-notes, the least dangerous of the two. It *is* made of basswood. The genius who got up the Beardsley Planing Machine, studied out this new paper. He made the pulp in the kitchen of his house in Albany—and made the paper there too, after some primitive fashion, in which a sieve conspicuously figured. On one of these samples is an advertisement of $50 reward. Basswood has fairly entered into the service of Man in the pursuit of stolen property. This handbill indicates a horse and wagon as the object of the distress of the gentleman who invokes the linkwood to aid his search of a thief. It is of white, and quite smooth paper.

We understand that the wood is treated by revolving cutters, which reduce it to fibre in no time. Then something else is done to this fibre, which we don't understand. A caveat is on file at Washington, which will inform the curious what this something is. Two other things, we are told, of which the most important is, that Mr. Beardsley can make the pulp, and make a fortune out of it, by selling it at two cents the pound. The other is, that an edition of the *Albany Evening Journal* will soon be printed upon the paper.

Mr. Beardsley was last week engaged in building machinery for a paper mill, under his new process. The white cedar is said to yield the finest and strongest paper. There is talk of setting that apart for bank notes. The Cotton Wood of the South, and the Cypress, are said to be especially adapted to it, as also is the Tamarac. Devoutly do we invoke success upon Beardsley's efforts.—*Buffalo Democracy.*

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of CHARLES FRODSHAM'S NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler.....Massachusetts
John E. Thayer, Esq..... "
Enoch Train " ..... "
E. C. Bates, " ..... "
F. W. Thayer, " ..... "
Wm. Whiting, " ..... "
Geo. M. Thacher, " ..... "
David Dyer, " ..... "
Alvin Adams, " ..... "
Billings Briggs, " ..... "
David Weld, " ..... "
Hon. Ebenezer Lane, } ..... Sandusky.
E. F. Osborne, Esq. } ..... Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12.....
" 14.....$230
" 16.....
" 18..... 250
" 20..... 275
" 22..... 300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty secouds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven secouds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The followiug is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies now that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guaranatee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,
Christiana, Pa.
Or, to **CHRISTIAN UMBLE,**

y.10†

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY.

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¼ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils, -10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., John ockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes——1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.--4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON& CO.,
mr3 140 and 142 Main street

RAILROAD MAP.

WE have now ready A RAILROAD MAP OF THE WEST, containing ALL THE RAILROADS constructing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a competent hand.

The size of the sheet is 24 by 38 inches, and can be sent by mail.

Price—plain..... 40 cents.
Colored in outlines..... 50 cents.
Full colored ..... 75 cents.

Liberal discounts will be paid to those wishing them in quantities.

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to U. P. JAMES will secure prompt attention

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Colnmbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,
Through Tickets from all Parts of the West,
ARE NOW SOLD IN
Cincinnati, Lonisville, Madison, Indianapolis. St. Lonis, Chicago, Toledo, Detroit, Cleveland, Colnmbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION
The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further exteuded to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,
The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York.
And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

OLMSTED, TENNYS & PECK,
jo.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,

MATHEMATICAL AND PHILOSOPHICAL

INSTRUMENT MAKER!

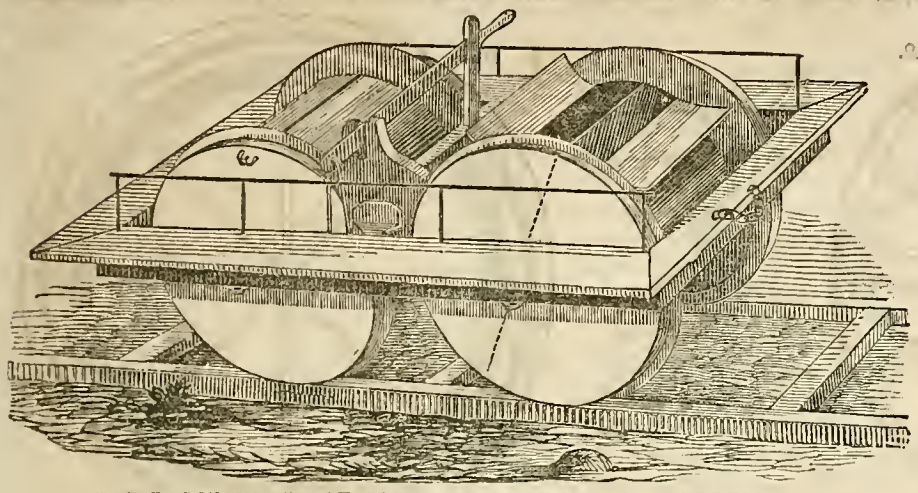
HAVING removed from his old stand to south-west corner of Fifth and Race street, and increased his facilities for making instruments, is now ready to supply Levels, Transits, Theodolites, the Dumpy or Gravatt Level, Circular Protractors of Troughton & Simms model, Surveyors Compasses, Pocket Compasses with and without sights, in great variety. All kinds of Land Chains; Ivory and Box wood Scales of all kinds and graduation; Drawing instruments of all kinds, brass and German silver. Measuring tapes of all kinds. Magnets, Magnifyers, Barometers, Spy Glasses, &c., &c. Repairing promptly attended to. ap.6-6*.

ENGINEERS' MATERIALS.

EGGERS & CO.,

WHOLESALE DEALERS IN

PAPER & STATIONERY,



Since first January,

No. 127 Walnut St., bet. Third and Fourth,

OHIO SCALE WORKS.

Rigdon, Ryland & Co.,

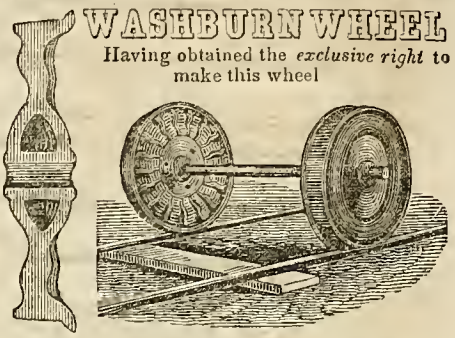
No. 39 Vine Street, between Front and Columbia streets,

CINCINNATI.

WE are now prepared to furnish **Railroad Track and Depot Scales** of all sizes, which we warrant in every respect equal to any manufactured in the United States.

Being practical workmen ourselves, we feel confident that we can furnish the West and South with as good an article and cheaper than can be bought East.

Cincinnati, June 20, 1851.



FULTON CAR WORKS,

CINCINNATI, OHIO.

THE Proprietors of this establishment would respectfully call the attention of Railroad Companies in the West and South to their establishment at Cincinnati.—Their facilities for manufacturing are extensive, and the means of transportation to the different points speedy and economical, They are prepared to execute to order on short notice, eight-wheeled Passenger Cars of the most superior description. Four or eight-wheeled Baggage, Cattle, Freight and Gravel Cars. Also, Crank and Levor Hand Cars, Trucks, Wheels, and Axles fitted.

WASHBURN WHEEL

Having obtained the *exclusive right* to make this wheel

In Cincinnati, Covington and Newport, they are now prepared to furnish Railroad Companies with that Celebrated wheel, with or without Axles. Also, Journal Oil Boxes of any pattern, and Castings for cars fitted to order at the shortest notice.

Address KECK & HUBBARD,
Fulton Car Works Cincinnati, Ohio.
ap.12 Office 62 East Second Street.

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, eastings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

J. DAVENPORT.... M. D. WELLMAN.... C. M. RUSSELL

DAVENPORT, RUSSEL & CO.,

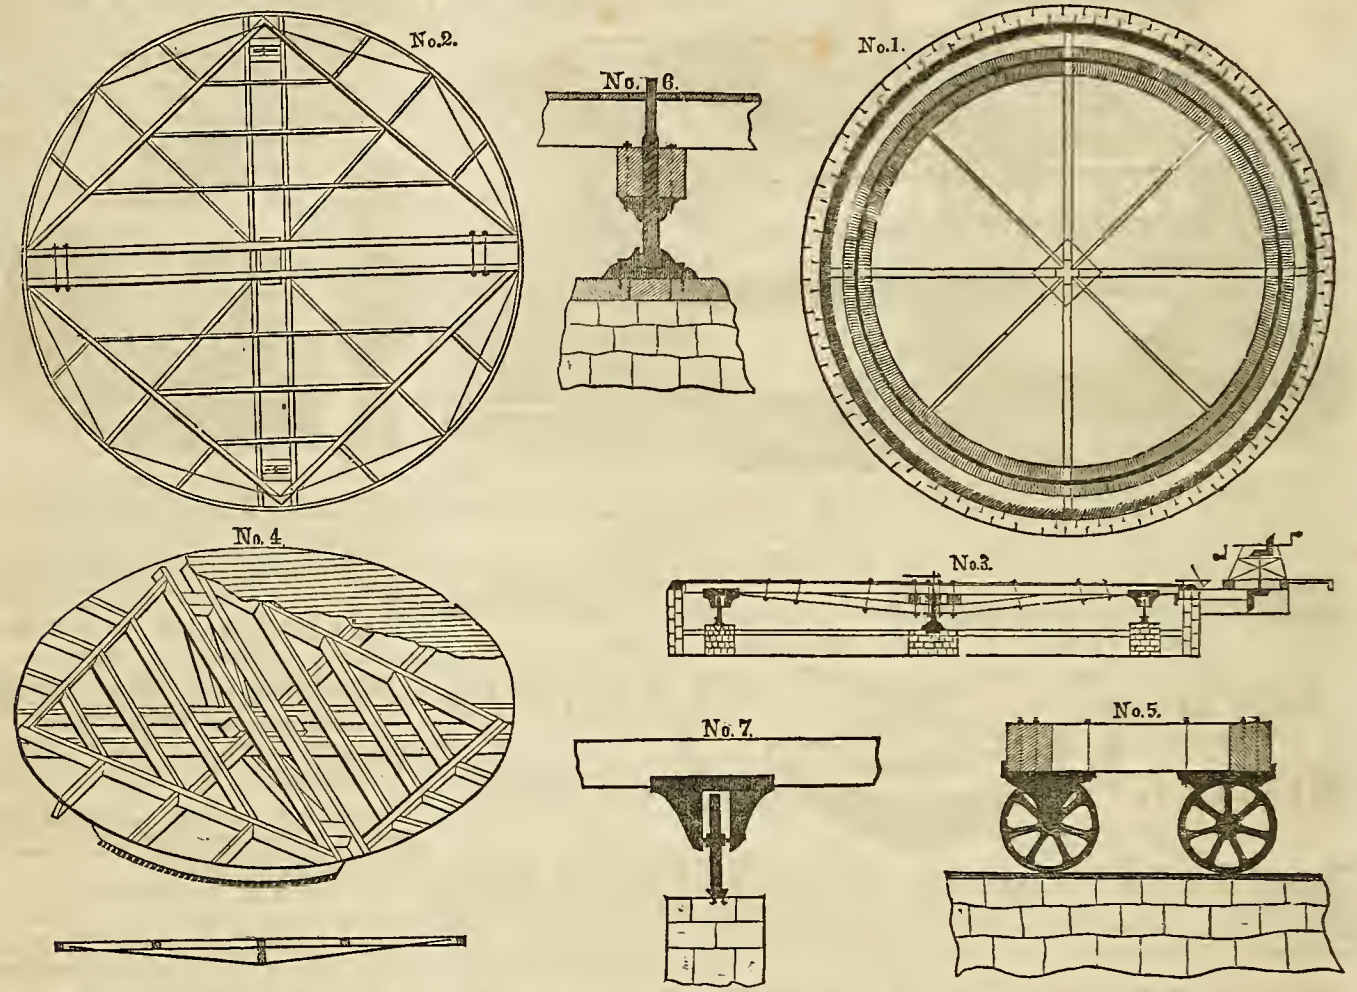
Railway Car Manufacturers,

MASSILON, OHIO.

THE subscriber, late of the firm of Davenport, Bridges & Co., Fitchburgh, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident that perfect satisfaction can be given in all work entrusted to our care.

We have now on hand the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States.



Feb. 16† JOSEPH DAVENPORT.

RAILROAD IRON, LIGHT WEIGHT.

470 TONS, 47 lbs. per yard, good quality and pattern, now lying at New Orleans. For terms apply to VOSE, PERKINS & CO.,
ap27-tf New York

CARHART'S IMPROVED TURNTABLE.

Now building for 13 of the Principal Roads in Ohio, Indiana, New York, New Jersey, and North Carolina.

This Table, together with an Engine and Tender of 30 Tons Weight, can be Turned by One Man in 25 Seconds.

RAILROAD COMPANIES in want of *Turntables* of a permanent and durable character, at a low price, are respectfully referred to the annexed references. The undersigned being confident that the manner of turning engines by his Table is the most permanent, expeditious, and cheapest in the United States, solicits the attention of Engineers, and others, to his improvement. The undersigned being a practical mechanic, and having devoted his time, for the past five years, exclusively to the construction of Turn and Transfer Tables, Draw and other Bridges, is prepared with every facility for executing orders in that line with promptness and satisfaction.

The price, which is always based upon the use of the best materials and best workmanship which can be procured in the market where used, can be determined only by the locality.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal

Railroad Printing.

WE have now attached to this office an extensive Composition and Press Room and Bindery, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish Railroad and other Reports, with or without Maps or other Illustrations, gotten up at short notice and in superior style. Also, Blanks of any description, adapted to the wants of the various departments of the Railroad service, and to the wishes and tastes of the parties.

Also, Railroad Tickets and Conductors' Checks. Our patent Card Press, enables us to supply any demand at Short Notice and in Unequalled Styls.

Also, Blank Books, ruled to any pattern, with or without Printed Headings, and bound in the most substantial manner.

With the numerous facilities for doing the Best Work, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

MISSISSIPPI AND TENNESSEE RAILROAD.—The first annual report of this Compsny has been received, and will be noticed in our next.

☞We are indebted to a friend at Little Rock, for Public Documents.

☞We have received the January number of the "American Journal of Science and Arts." In its table of contents are an account of the Volcanic Springs in the Desert of the Colorado, Southern California; Geographical Distribution of Crustacea; Genth's Contributions to Mineralogy; Dove on the Variations of Atmospherical Phenomena; Lachlan on the rise and Fall of the Lakes; Agassiz on the Ichthyological Fauna of Western America, and various other interesting scientific subjects.

☞The December number of the "Journal of the Franklin Institute," Phil., is duly received, and contains some interesting articles on the stoppage of Railway Trains, and the use of Coal in Locomotives.

DE BOW'S REVIEW for December is received, and as usual, contains a vast amount of statistical information.

RAILWAYS OF THE NORTH-WEST—SUMMARY EXHIBITING THE THROUGH LINES.

Having given a general review of the railways, in each State of the North-West, we shall now proceed to sum the whole up, and exhibit the entire lines, as made up of distinct parts. We shall first take those, which run East and West, commencing at the North, and then proceed to the North and South, and finally to the unconnected lines:—

1. The first great line through the North-West, may be called the LAKE SHORE LINE, and extends, in fact, from the New York and Erie Railroad, or the New York Central to Galena, as follows:—

Lake Shore Line, in Ohio, *via* Sandusky, and Toledo, and Michigan Central, and *Galena* Union....657 miles.

This line connect witb the Eastern lines, at the Pennsylvania line, and goes to Galena.

A second Lake Shore line is formed from Cleveland, *via* Norwalk to Toledo, thence on the Michigan Southern Railway, and Northern Indiana to Chicago, thus:—

Cleveland to Toledo, thence to Chicago....356 miles.

2. THE NORTHERN CENTRAL LINE:—This continues the Pennsylvania Central, from the Pennsylvania Line to Fort Wayne, and thence through Illinois, and Iowa to Council Bluffs. This is only complete through Ohio; but, is partially in progress West, and is composed, as follows:—

Ohio and Pennsylvania, *via* Crestline; Ohio and Indiana, to Fort Wayne; Lacon and Platte Valley Air Line.....860 miles.

Of this line only 278 miles, from the Pennsylvania to Fort Wayne, is completed. Auxiliary to this, is the Clinton and Tiffin Line, from Pennsylvania to Fort Wayne,—242 miles.

3. The OHIO CENTRAL LINE from Wheeling to St. Louis, as follows:—

Ohio Central, *via* Zanesville, Columbus, Piqua, and Indiana; *via* Union, Indianapolis and Bellefontaine; Terre Haute, and Richmond; Terre Haute and Alton to St. Louis.....581 miles.

4. SOUTHERN LINE.—This goes from Wheeling, *via* Marietta to Cincinnsti; thence on the Ohio, and on Mississippi Railroad to St. Louis, and is composed as follows:—

Cincinnati and Marietta Railroad, *via* Chillicothe and Ohio, and Mississippi, *via* Vincennes.....591 miles.

The above great East and West Lines, comprize about 3,044 miles; of which more than 2,000 miles are completed. They will make *continuous West Lines*, from the Pennsylvania Line, connecting New York, Boston, Philadelphia, and Baltimore, through Ohio, as the gateway with Chicago, Galena, Council Bluffs, St. Louis, and Kansas, in the west. There are other Lines lateral to these, such as the Wilmington and Zanesville Line, the Bellefontaine and Indianapolis, with several smaller ones, which make additional limbs, in the great East and West Chain; but do not form new through routes.

After passing on the line of emigration from the East to the West, the next great object was to connect the Basin of the Lakes on one hand, with the Ohio Valley on the other. This could be done, at various points, with great advantage, and, as a whole, these have proved the most profitable lines, in the North-West; mainly, because they terminated at the commercial cities in the West, and thus had a great local trade. The Ohio Valley is nearest the lakes, at Pittsburg, and thence emerges from them, till the line of separation is greatest on the Mississippi river; thence the North and South Lines are shortest on the Eastern side, and longest on tbe West. The regular North and South lines are as follows:—

1. The Pittsburg and Cleveland Line, from Cleveland to Wellville.....100 miles.
2. The Cleveland and Cincinnati.....254 "
3. The Sandusky, Mansfield, Newark, Jackson and Portsmouth.....212 miles.
4. The Sandusky, Dayton, and Cin'ti Line...213 "
5. The New Albany, Salem, La Fayette and Michigaa City Line.....288 miles.
6. I inois Central, from Cairo to Chicago..360 "

These North and South Lines comprize 1,427 miles and are all finished, and in operation, except that part of the Sandusky and Portsmouth Line, which lies between Newark and Jackson, and which, we presume, will be finished next year.

In addition to these North and South Lines, another will be made by the *Dayton, Troy, and Michigan* Road, when completed, to Toledo. Another, and a very important one, in some future time, by the *Cincinnati, and Mackinaw Line*, from Greenville, (connecting with the Cincinnati Roads,) to the Straits of Mackinaw. A third, by the *Madison, Indianapolis, and Peru* Line to the Lakes. A fourth, by the *Evansville, Terre Haute, and Crawfordsville* Line continued.

These roads will all, in a short time, be necessary to connect tbe system of the Lakes, with that of the Ohio.

In addition to these direct lines, proceeding either East and West, or North and South, we have several long and important lines, (most of which, however, are not yet complete,) crossing these *diagonally*, South-East, and North-East, or the reverse. Of these, the principal ones are:—

1. The Pittsburg, Steubenville, and Cincinnati Line 190 miles.
2. The Pittsburg, Maysville, and Cincinnati Line, *via* M'Connelsville.....110 miles.
3. Franklin, and Warren Line.....150 "
4. Wabash and Erie Line, between Evansville and Indianapolis.....150 miles.
5. Toledo, and Illinois Line, Toledo to Danville.....245 "
6. Cincinnati, Indianapolis, and La Fayette.152 "
7. Chicago and Rock Island.....181 "
8. Chicago and Mississippi.....285 "
9. Paducah and Vincennes.....140 "
10. Milwaukee and Mississippi.....158 "
11. Cincinnati and Chicago.....250 "

These *diagonal* lines amount to more than 2,000 miles, and some of them are of great importance.

The above are the principal railway routes

in the North-West They have (all of them) two great objects in view. *First*, to connect the cities of the Atlantic Slope, with those of the Ohio Valley; and *secondly*, to connect the cities and ports of the Lakes with those of the Ohio Valley.

We shall now give the *summary* of all the Railways complete, and in progress, in the North-West. In our last number, we gave several *additions and connections* to the State aggregate, which we shall now insert to make the whole complete.

SUMMARY OF RAILWAYS IN THE NORTH-WEST.

	Number of Roads.	Complete.	In progress.
In Ohio	41	2,344 miles	1,801 miles
In Indiana	26	1,288 "	1,443 "
In Illinois	27	1,909 "	1,556 "
In Michigan	7	434 "	200 "
In Wisconsin	8	173 "	450 "
In Iowa	5	— "	983 "
Six States	115	6,248	6,433

This is an immense aggregate for such new states; but, is not more than a *fourth* of the railways they will bear, with profit! That this is true, we need only look to the surface, and resources of the states. Thus:—

Ohio	39,964	square miles.
Indiana	33,809	" "
Illinois	55,409	" "
Michigan	61,000	" "
Wisconsin	53,924	" "
Iowa	50,914	" "
Aggregate	295,020	" "
Railways Complete	6,248	" "
Railways to surface, one mile to	48	" "

If all the above railways be completed, there will be but one mile of railway to 24 square miles. But, in a very fertile country, rapidly increasing in population, and capable of immense exports, one mile of railway to ten square miles, is none too much, and this has been proved by experience. That ratio will give thirty thousand square miles to these six states, and there is very little doubt, that in the course of ten, or fifteen years, they will have that number. As the fact becomes developed (as it will be), that most of these roads actually *make* from ten to fifteen per cent.—the Railway excitement will revive.

HAMILTON AND SAUGEEN R. R.

The Directors of the Galt and Guelph railroad, have for some time been desirous to extend their line to Saugeen, and thus form a direct communication between Lakes Huron and Ontario. An application was made at the beginning of this sesson to the Canadian Parliament, for an amendment to the charter of the Galt and Guelph railroad, to enable them to carry out this design. The bill granting the right petitioned for, has recently passed; we may, therefore, expect that soon one more line will be extended in Canada.

OHIO & MISSISSIPPI R. R.—The Ohio and Mississippi Railroad have nearly completed their temporary bridge over Mill Creek, near Cincinnati.

IMPORTANCE OF R. R. TO MINERAL LANDS.

Railroads as channels of commerce, designed to accomodate a traffic already established, and supposed to be sufficient for their maintanance, have very naturally been generally built on such routes as afforded the best prospect of abundant supplies of agricultural articles seeking an outlet for other markets.

That such a road is not, however, a *better paying* road than one built through mineral lands, and designed solely and exclusively for the transportation of heavy freight, has already been shown by a comparison of the earnings of some exclusively commercial, and exclusively mineral railroads.

But it is not in its earnings alone that a railroad running through mineral lands is as profitable, and even more profitable than one running through a rich agricultural region. There is another feature of interest in the building of a railroad, that is of more importance to the country through which it passes, than the dividends which the road will probably make. Poor, indeed, must that country be that cannot support a railroad by its travel and its traffic. The universal experience of our country shows that when a road is once built and fairly started, it is abundantly able to take care of itself.

The point to which we would direct attention, is the tremendous increase of the value of land; and here again the difference will be found to be widely in favor of mineral lands.

Lands in Illinois entirely destitute of railroad and river facilities, are worth from *one* dollar to *three* dollars per acre, or an average of *two* dollars. By referring to an extract from the Bloomington *Pantagraph*, given in No. 93 of the *Record*, it will be seen that the opening of the Illinois Railroad increased the value of these lands at once to an average of $10 per acre, for ordinary agricultural purposes, and in general it will be found that in a few years after the opening of a railroad, farms are worth from $20 to $30 per acre, say an average of $25, which is an increase of $23 per acre over the value of the same region in its unimproved and unsettled condition.

Now mineral lands under the same circumstances, that is, without advantages of transportation, are worth about the same price, $2,00 per acre; with the advantages of railroad facilities, the following extract from the Vincennes *Gazette* will show the prices actually paid:

There have been lately great speculations in coal lands in Illinois, near the line of the Central Railroad and on the Wabash. Lands recently worth from $1,25 to $3 an acre, have been selling from *twenty* to *fifty* an acre. The Central Railroad offers great facilities for the transportation of coal to the Ohio River, where it can be used for steamboats, and where for cheapness and excellence it must take the place of wood for fuel. The coal is inexhaustible on the line of the road. The Central Company has offered great advantages for those who will engage in the coal business, in fixing a moderate price for the transportation, and agreeing to deduct ten per cent. in cases where 100,000 tons are sent to Cairo within three years.

Coal lands then are actually selling at from $20 to $50 per acre, or at an average of $35, where the mines are unopened. Now the moment these mines are opened, and labor can be had to work them, they are worth and actually sell for $200 and $300 per acre, making an average of $250, and we have an increase in a few years of $248 per acre in the value of the land.

But to apply these results to the actual increase of value on the line of a railroad of one hundred miles in length. We may safely assume that the influence of a railroad extends over a belt ten miles in width on *each* side of the line, making an aggregate width of twenty miles. Now a belt of country twenty miles wide, and one hundred miles long, contains 1,280,000 acres. Now assume one-tenth of this (and the proportion will be found not any too large) 128,000 acres to be mineral land, and the immediate increase in value, consequent upon the opening of the road, would be the difference between $2 and $35 per acre, $33 for the mineral land, and the difference between $2 and $10 per acre, $8 for the balance.

128,000 acres increase of value at $33 per acre	$4,224 000
1,152,000 acres at $8 per acre	9,216 000
	$13,440 000
Add to this the value of 100 miles of railroad at $30,000 per mile	3,000 000
Total	$16,440 000

This then is the actual gain to the country immediately resulting from the opening of 100 miles of railway, through a region containing coal and iron.

Let us now see the actual increase of value on the line of such a railroad as that portion of the Pittsburgh, Maysville, and Cincinnati road, now in progress of construction, 110 miles in length. A belt, twenty miles wide and one hundred and ten miles long, contains 1,408,000 acres. Assume one-tenth of this 40,800 acres to be mineral land and the remainder 1,267,200 acres to be average agricultural land, and the immediate increase of value will be seen to be enormous.

Now assume that but one-third of the mineral lands are improved, and that the agricultural lands have only increased in value $15 per acre, and the improved mineral lands $240, and the unimproved lands $25 per acre and the result will stand as follows:

46,900 acres (mines opened), increase of value $240 per acre	$11,256 000
93,900 acres (mines not opened), increase of value $25 per acre	2,347 500
1,267,200 acres agricultural lands, increase of value $15 per acre	19,008 000
Total increase of value	$32,611 500
Value of 110 miles of railroad, at $30,000 per mile	3,300 000
Total increase of value	$35,911 500

That is to say the belt of country, 20 miles wide, lying on the route of this railroad for the 110 miles proposed to be opened, would actually sell for $35,911,500 more after the completion of this road, than it would sell for before; and the past experience of our own and neighboring states, shows this to be no exaggerated fancy, but a simple statement of what has been, and may be the case again.

SKETCHES OF CITIES IN THE WEST.

NUMBER I.

MEMPHIS ON THE MISSISSIPPI.—We begin with Memphis, because it is the most promising town in the south-west. Memphis lies on one of only three bluffs of the lower Mississippi, where it is *possible*, without unnecessary expense for artificial works, to build a great town. It is almost 280 miles from the mouth of the Ohio, and 730 miles by water from Cincinnati. It is, however, only 430 miles in an air line, and a railroad to be made to Louisville and Cincinnati, will reduce the distance run to less than 500 miles, and the time to twenty hours! From Memphis also a Railroad is partially completed, and doubtless will be finished to Charleston, S. Carolina, connecting it with the Central South. Memphis being also precisely east of Little Rock, it may be, and will be, easily connected with that by a line of railroad, which shall bring within its commercial influence the great Valley of White River, and the Arkansas. Thus, it has great commercial advantages, and its admirable situation on a beautiful and healthy bluff, secures them. We visited it in 1851, and were struck with the superiority of its position over any other place we had seen in the south-west. It is destined, in our opinion, to be the largest city in the south-west, not excepting N. Orleans. Its rapid progress in population gives, at least, some countenance to our opinion. The following are the censusses at different periods:

In 1840	3,000
In 1850	6,427
In 1854	12,687

Memphis will, probably, contain more than 25,000 at the census of 1860. Its high position has secured its health so far, that neither cholera nor yellow fever have visited it, in the several forms in which they have prevailed in almost all the southern cities. This immunity is likely to continue; for it lies in both high and dry ground, and has purer and better air, than any other place in that region. Nearly one-fourth the population of Memphis are slaves, and the country back of it is a cotton planting section. Hence, Memphis, as the port of that region, will be chiefly a commercial town; but if it would grow to be a really large place, it must seek to *manufacture*, and this it may. By railways through Tennessee and Kentucky, it may be supplied with coal and iron; and then iron factories, and steam machinery, and cotton mills, may be readily carried on. If Memphis would be great, she must make railways, and build factories.

Railroads.

BALTIMORE AND OHIO R. R.

We gather a few interesting statistics from the various reports of this road for the month of November. Since the opening of the Central Ohio railroad there has been a large increase in the receipts both for passengers and freight.

The revenue for the month of November has been as follows:

	Main Stem.	Wash. Br.	Totals.
For Passengers	$52,600.75	$23,657.82	$76,258.57
For Freight	264,170.11	7,443.59	271,613.70
	$316,770.86	$31,101.41	$347,872.27

As compared with the corresponding month of last year, we have the following result:

	Main Stem.	Wash. branch.
November, 1854	$316,770.86	$31,101.41
November, 1853,	296,273.53	27.768 25
Increase	$20,497.33	$3,233.16

In the item of passenger receipts alone, the receipts for November of the present year were $9,000 more than for the same month last year.

According to the official report of freight, the following are the principal articles transported to Baltimore during November.

Bark, tons	157	Lumber, tons	397
Coal, "	50,717	Lime, "	76
Fire Brick, "	322	Live Stock, viz:	
Firewood, "	192	Hogs, "	2,026
Flour, bbls.	58,061½	Sheep, "	107
Grain, tons	521	Horses & mules	54
Granite, "	404	Horned cattle "	539

The receipts for the six months of 1853, from April to September inclusive were

From passengers	$285,330.91
From tonnage	925,983.25
	$1,211,314.16

For the following October to March inclusive

Passengers	$274,432.13
Freight	1,470,014.76
	$1,744,446.89

From April to September 1854, inclusive.

Passengers	$294,659.38
Freight	1,606,503.16
	$1,901,162.54

The receipts for the six months from Oct. 1853 to April 1854, will thus be seen to be 44 per cent. greater than for the six months preceding. While the receipts for the six months from April to Oct. 1854, are only 10 per cent. greater than the six months immediately preceding. A portion of this diminution in *increase* of receipts is undoubtedly owing to the state of navigation on the western rivers. However, now that the Ohio Central road is in full operation we may hope for a more regular increase in business.

The coal trade of this road is large and increasing. During the year ending 30th Sept. 1854, there was carried

	TONS.
From Cumberland,	312,783.09
" Piedmont	174,224.05
" Fairmont,	37,437.11
	524,445.25
Of which there was for the use of the Company	61,022.42
Leaving a balance, which paid freight, of	463,422.83
Amount during previous year,	308,890.00
Increase,	154,532.83

The revenue from the coal trade during the year amounts to $1,134,628.46.

"The demands of the trade at the present time are very urgent; almost every operator in the coal region is pressing for larger accommodations, and new and important mines are about commencing business, with the capacity to mine and send down large quantities of coal. Full employment could be found for at least 50 per cent. more machinery in that trade than is now or can be with the present equipment of the road appropriated to it. From these facts it will be seen that the advance in freights of 50 cents per ton from Cumberland, and 56 cents from Piedmont, made on the 1st of November, 1853, has not operated to check or limit the business."

The carrying of Live Stock has been an important branch of trade during the year, and appears to be steadily on the increase, especially from Moundsville, Cameron, and other stations on the Western Division of the Road. The following statement will show the extent of this trade, giving the quantities of each description of Stock transported during the year ending the 30th September, 1854:

119,699 Hogs,	Weighing	10,201.1.3.5
31,631 Sheep,	"	1,806.10.0.0
3,522 Horses and Mules,	"	1,762.0.0, 0
10,017 Horned Cattle,	"	5,013.0.0.15
164,869	Tons...	18,776.11.3.20

The amount of Flour carried on the main stem has been 709,495 bbls., and on the Washington Branch 42,754 bbls., making a total of 752,249 bbls. carried to Baltimore. During the year there has been laid 21 miles of double track, together with additional sidings. A heavy T rail on cross ties has been substituted on 50 miles at the east end of the line for the old string timber track.

The company own 208 locomotives of all kinds, including some immense ten-wheel engines for the mountain division.

Fatal Locomotive Explosion

LEBANON, N. H., Dec. 20.—An engine boiler on the White River Junction Railroad, exploded yesterdays blowing to atoms T. G. Moore the engineer. David Warner, the fireman, was badly injured. The explosion shook the buildinga tor half a mile around.—*Dayton Gaz,*

MEMPHIS & LITTLE ROCK R. R.

By a recent vote of the Legislature of Arkansas, this road has been adopted as the "branch of the Cairo and Fulton Railroad, from Little Rock to the Mississippi," for the construction of which Congress authorized the Legislature of Arkansas to grant alternate sections of the public land. As no point on the Mississippi was designated by Congress, the Legislature were left to elect the terminus of the branch, and have decided on Memphis in preference to Napoleon and Helena, both of which towns made strenuous efforts to secure the government assistance for themselves. It will thus be seen that 500,000 acres of public land are added to the available means of this Company, and this with the municipal subscription of Memphis and private subscriptions already obtained amounting to about $800,000 will secure the early construction of this road.

There has been for two months past a large force employed on the first section of fifteen miles, and the contractors have agreed to have the grading of this portion complete by the first of January.

The road is in itself an important undertaking, not only because it will develop the resources of the region through which it passes, but because its great aim is *westward*. When the Arkansas and Texas Pacific roads are pushed forward this will become one of the tributaries of the great stem, by receiving from its northwestern connections and carrying forward the stream of emigration to line the great *through-route* with settlers.

CHICAGO, ST. CHARLES & MISSISSIPPI AIR LINE RAILROAD.

We learn from the Democratic *Press* of Chicago that this road is steadily progressing, and that its progress thus far has been mainly owing to the interest taken in the enterprise by those to be benefitted by it. No bonds have been presented for sale.

This gratifying feature is, perhaps, one of the results of the stringency in the market where such things are sold; but, whatever be its cause, its effects are certainly good. The *Press* says: "A gentleman, well posted in these matters, informs us that the farmers along the line of the road are manifesting a commendable degree of enterprise, and are determined to take stock to the extent of their ability to aid in its construction. Their zeal is stimulated by the fact that those who live near the Galena road, have been realizing from five to fifteen cents per bushel more for their grain than the farmers whose distance from the road does not enable them to take advantage of the market. They are also calculating the expense of hauling their grain to the roads north and south of them, and they find that the completion of the St. Charles Air Line will not only increase the price of their crops, but the value of their farms in the same ratio."

The grading and bridging of the forty miles from Chicago to St. Charles is completed, and ready for the superstructure and the iron is laid to Des Plaines.

Selected Railroad News.

The Four Great Railroad Lines.

The Cincinnati Price Current gives the annexed comparative statistics of four of the great Railroads.

	Length.	Cost.
New York and Erie	460 miles	$24,000,000
New York Central	510 miles	35,000,000
Pennsylvania Central	350 miles	17,000,000
Baltimore and Ohio	380 miles	22,500,000
Aggregate		$108,500,000

The cost of the roads far exceeded the original estimates, and so has the business.

The following table shows the amount of money earned in 1853:

	Passengers.	Freight.	Total
N. York and Erie	$1,372,272	$2,459,743	$3,832,015
N. York Central	2,677,316	1,838,830	4,516,146
Penna. Central	1,069,740	1,507,320	2,576,260
Baltimore and Ohio	464,214	1,477,578	1,941,822
Aggregate	$5,583,572	$7,273,871	$12,865,343

"The receipts for 1854, it is well known will go several millions beyond the above aggregates.

"No one ever imagined, before these roads were built, that the freight business would exceed the amount received for passengers. It is remarkable also, that the money for freight comes from some of the heaviest articles, as may be seen in the following aggregate upon three of these roads:

	Flour bbls.	Coal tons.	Pork & Bf bbls.	Iron tons.	Lumber tons.
Balto. & Ohio	666,160	225,574	42,000	14,000	48
Pa. Central	205,600	4,000	85,000	1,000	1,000
N. Y. & Erie	350,000	5,000	150,000	2,000	100,000
Aggregate	1,221,130	254,574	277,000	17,000	101,048

"The freight carried on the New York and Erie road amounted to 650,000 tons, an amount greater than all the aggregate of the above articles. When we look at the enormous freights, especially in coal and flour, on the Baltimore and Ohio road, and on lumber and merchandise on the New York and Erie, we perceive at once two great facts—that the modes of transportation have changed, and that the amount transported exceeds all common belief.

"But there is another effect of these great railways, which has special reference to the Central West. It is the surplus produce of the West, which chiefly makes up these enormous freights; and just in proportion as their facilities have increased, has the value of western produce increased. They have made the entire surplus of both agricultural and mineral wealth in the Valley of the Ohio saleable to market. The cost of freight on a barrel of flour, (which may be taken as a standard for other freight,) from Cincinnati to New York, is from $1 to $1 20, or, in other words, about 50 cents for 100 lbs., on western produce, at a distance of over 700 miles.

"The cost of carrying 100 lbs. of flour 100 miles on the Baltimore and Ohio Railroad is about nine cents. Hence, for any point in South eastern Ohio, Western Virginia or Maryland, this offers the cheapest line of transportation. The result we see in the fact that in 1853 that road actually transported 650,000 bbls. of flour.

The conclusion to be obtained from these facts is that notwithstanding the immense cost of these works the favorable effects on commerce have been much greater. One hundred million of dollars invested in four iron roads seems like a prodigious outlay for such a purpose; but, what resources have they developed? What wealth have they produced. Great regions of lumber, iron, and coal have been thrown open to enterprise, and the giant arms of commerce have been lengthened till they grasp the rich fields of the West, and have introduced, in turn, the merchandise and arts of other climes and other countries.

LIABILITES OF R. R. FOR STOCK KILLED.

The following is the charge of Hon. John C. Humphreys, at the last term of the Shelby Circuit Court at Raleigh, in the case of Wm. C. Harrison, against the Memphis and Charleston Railroad. It is of interest to persons living along the line of the Road, as setting forth the legal doctrines in the premises. We presume that as this charge is based upon the charter, as it originally passed, and as it was accepted by the Company, that any subsequent legislation in conflict with the principles laid down here, would be held as an invasion of the vested rights, and hence inapplicable:

CHARGE OF JOHN C. HUMPHREYS, AT THE LAST TERM OF THE SHELBY CIRCUIT COURT, AT RALEIGH.

Wm. C. Harrison *vs.* the Memphis and Charleston Railroad Company. This case is under the law as it existed, independent of any act of the legislature, and the Court charged the jury as follows:

The suit is to recover for hogs owned by the Plaintiff, and alleged to have been killed on the road of defendants by the running over them of the cars, whilst the train was passing thereon, and the liability of the defendants to pay for the hogs killed in such a case, would depend on the conduct of defendant's agents managing the trains. If the hogs were killed by design, or from negligence of such agents — that is from the absence of common care on their part to prevent it, the defendants would be liable; but if not by design, and not from such negligence, the defendants would not be liable. The defendants have the right to the exclusive possession of their road, and stock straying thereon would be trespassing; and the defendants are to be held bound for the observance on the part of their agents on the train of that degree of care to avoid injuries to or killing of such stock, that persons having ordinary skill in such employment and the prudence of ordinary men, and acting in good faith to avoid such injuries, would observe.

The absence of this degree of care would be such negligence as that if the killing of the hogs resulted therefrom, the jury should find for the Plaintiff the value of the hogs; and if there was not such negligence, the jury should find for the defendants. The law did not presume negligence, to warrant for the jury in finding for the Plaintiff, it was not alone sufficient that it appeared the hogs were killed by the cars — it must also appear that the killing was the result of negligence as before explained, which negligence was not to be inferred without proof; but was to be shown, if it existed, by evidence of the cir-

cumstances and manner of the killing in the particular case.

A case of a character similar to the above was tried during the season at our Circuit Court which has just closed. It was the case of Thos. Self *vs.* the Western and Atlantic Railroad, of the State of Georgia, for the killing of a horse, *since* the passage of the act of the last Legislature, in relation to the liability of railroad companies for killing stock.

Minnis & Ellis for Plaintiff,

J. C. Burch & Jarnagin for Defendant.

The evidence as agreed upon between the parties, was that a horse of Plaintiff's worth from eighty to eighty-five dollars, while straying upon the road of Defendant, about the 20th of February last, was killed by being run over by a train of cars belonging to Defendant, while said train was pursuing its ordinary duties. Judge Goodal charged in substance: The act of 1853, in relation to the liability of railroad companies for stock killed by them, does not materially change the law on that subject from what it was anterior to the passage of that act. If the jury are of the opinion from the testimony, that the horse of Plaintiff was killed by being run over by Defendant's cars, and that this was occasioned by the negligence or want of ordinary care on the part of Defendant, or its employees who had the management of said train, then they would return a verdict in favor of the Plaintiff for the value of the horse as proved.

If either negligence or want of ordinary care in those who had the management of the train at the time of the killing was proved, then it would be the duty of the jury to return a verdict in favor of Defendant. The jury cannot presume negligence from the mere fact of the killing of the horse, but that must be made to appear from the circumstances under which the killing took place.

The jury in the above case not agreeing, after having the matter under consideration about two days, a mis-trial was entered.—*Chattanooga Advertiser.*

HOCKING VALLEY RAILROAD.

This road, according to the report of Mr. Latrobe, will be seventy miles in length, mainly following the Hocking Valley and traversing a region offering a heavy local trade. The grades and curves are slight—no grade exceeding fifty-three feet to the mile, and no curve upon a radius of less than 1433 feet—out of the 70 miles, 41 are upon a level and 44 upon a straight line. At Logan, this route intersects that of the Scioto and Hocking Valley Railroad, and at Athens that of the Marietta and Cincinnati Railroad—two most important connections. The cost of the road is estimated at $662,312; its gross annual revenue, $307,350; total current expenses, $130,711; nett income, $176,630; interest on capital, $128,849; surplus profits, $47,790.

Mr. Latrobe recommends the undertaking and completion of this road in two separate sections, viz: from Lancaster to Athens and from Athens to the Ohio river—either of which would prove remunerative in its constructors. He urges the parties respectively interested in these sections, to push ahead and not wait for each other. Accompanying the report is a large map and profile, clearly exhibiting the courses, distance and other features of the route—upon which, by the way, there is but one single tunnel! These surveys were made under the immediate direction and superintendence of Samuel Linton, Esq., first Assistant Engineer, to whom the Chief pays a merited tribute for the skill and ability with which he has performed the duties entrusted to him. We trust that President Borland will press forward this important enterprise, not relaxing in zeal and energy until it shall be completed.—*Lancaster Gazette.*

Scioto and Hocking Valley R. R.—We learn from J. M. Webb, the Superintendent of this road, that on Monday next a delegation of gentlemen from Boston, members of a company there, of which Hon. Abbot Lawrence is President, will start west with a view to passing over and examining the coal and mineral resources along the route of the road. Some time since several tons of the ore and coal from this region were sent to Boston for examination: and the result proved so satisfactory that the company, above named, contemplate taking the stock and bonds of the road, and furnishing the iron for its completion to Newark.

Should the coal and iron resources prove as productive as they have been led to suppose is the case in the beautiful region intersected by our road, they will enter into the arrangement at once. The road is now nearly all ready for the rail from Hamden to Newark, and its completion is devoutly to be wished for.—*Portsmouth Tribune.*

These gentlemen are now in the coal region, and we trust they will not be disappointed. The resources of the Hocking Valley are almost uncounted, and with a railway into the coal and iron hills must develope a trade which will not only enrich the country, but the railway over whose line the raw material and products must pass to market. With a continuous wide guage track from Sandusky to the coal region we can conceive of no obstacle in the way of a trade which must make the coal stock and the railway stock among the most profitable and permanently valuable of any in the West.—*Sandusky Register.*

CHICAGO AND ROCK ISLAND RAILROAD.

At the annual meeting of the stockholders of the Chicago and Rock Island Railroad Company, held at their office in this city, Tuesday, the 19th inst., the following named gentlemen were chosen Directors of said Company for the ensuing year:

Henry Farnam, of Chicago, Ill.; Joseph E. Sheffield, New Haven, Conn.; Azariah C. Flagg, Thos. C. Durant, N. York city; William Wolcott, Utica, N. Y.; John Stryker, Rome, N. Y.; Clark Durant, Albany, N. Y.; N. B. Judd, Isaac Cook, Chicago, Ill.; Nelson D. Elwood, Joliet, Ill.; T. D. Brewster, Peru, Ill.; Samuel Andrews, Rock Island, Ill.; Ebenezer Cook, Davenport, Iowa.

The following officers were chosen by the Board:

Henry Farnam, President.
Azariah C. Flagg, Treasurer.
Nelson D. Elwood, Secretary.

The following named gentlemen are the officers of the *operating department* of said Railroad:

John E. Henry, Superintendent; John F. Tracy, Ass't do. East. Division; W. H. Whitman, Ass't Sup't Western Division; John P. Babcock, General Freight Agent; James S. Elwood, Cashier; E. M. Goodrich, General Ticket Agent; Jacob Barney, Master Mechanic; D. F. Wilson, Master of Car Repairs; John W. Conlogn, Road Master.—*Press, Chicago.*

Mississippi, Gainsville and Tuscaloosa Railroad Company.—We are indebted to Col. Bliss, president of the above company, for a copy of his first annual report to the stockholders. From it we are gratified to learn that the affairs of the company are in good condition and that the prospect is bright for the early construction of the road.

The original charter of the company has been amended so as to authorize the extension of the road to Northport or Tuscaloosa, with increase of capital, and the right to cross, intersect, or connect with any other railroad or internal improvement company now or hereafter to be chartered, and also changing the name of the company and authorizing it to extend to Montevallo, &c.—if desired. Both amendments have been adopted by the directors. An arrangement has been entered into with the Alabama and Noxubee Mississippi railroad company on reciprocal terms, by which the companies may use a common line for any distance below Northport and Tuscaloosa.

The President also speaks of interviews he has had with the Directors of the Mobile and Ohio Railroad Company, which, without particularizing, he says were of a very satisfactory character.

Various lines have been surveyed between the Mobile road and Gainsville, and the one passing Wm. Kerr's has been finally agreed upon. In addition to these lines the Engineer, Mr. William Chide has made a reconnoisance of the country towards Beard's Bluff.—The President, speaking of this survey, says:

His report as to the feasibility of the route above Northport and Tuscaloosa, as well as the route below, is highly satisfactory. The distance from the Mobile and Ohio road to Beard's Bluff, upon an air line, is 185 miles, and the actual route will not vary much from it at any point. The route is feasible, traversing the heart of the coal region in the State, and of the best coal districts, rich also in other minerals, and abounding in the best of water power. This line completed, will secure what has been so long a desideratum in the State—direct and easy intercommunication between North and South Alabama. At the same time it opens up a channel of intercommunication with the North and Northeast, with signal advantage over any other that can be brought in competition with it, and gives the strongest assurance for a valuable and productive stock. Time will be required; but it is sure to be completed.

The amount subscribed for local work in Sumter county is $141,000, and in Greene $70,400. No report had been received from Tuscaloosa county.

Proposals for grading &c., between the Mobile and Ohio railroad and the Bigbee river have been already invited, and that portion of the line passing through Greene county will soon be advertised.

At a meeting of the stockholders, held on the 22d ult., Jonathan Bliss, Esq., was unanimously re-elected President, Messrs, John C. Whitsitt, William M. Lewis, Greene B. Moble, Wm. L. McDow, Israel C. Brown, Simeon Maxwell, Wm. Miller and Robert Craig, were at the same time elected Directors; John A. Minniece was chosen Secretary, and Amos Travis Treasurer.

☞ The Press of Pittsburg are agitating the question of improving the navigation of the Ohio by locks and dams.

Miscellaneous.

From the Montreal Gazette, December 9th.

Lancaster Gun---How it differs from the Ordinary Cannon---its Merits and Defects.

Among our extracts from English papers in a recent issue, our readers must have observed a paragraph upon the subject of this new arm, and as a public writer has showed so much ignorance while professing to instruct others, it has occurred to us that a brief description of this powerful instrument of death and the principle of its construction would be acceptable to many.

The writer in question commences by saying, "The object of bringing the Lancaster gun into an ellipsis is to prevent the balls from taking a rotary motion," and thereupon he raises the question whether the elliptical ball, in passing through an elliptical bore, being prevented from taking a rotary motion, has not a dangerous tendency to break the gun. So far from his premises being correct the very reverse is the true state of the case. The elliptical bore is intended to give the ball a rotary motion, for in this motion of the ball upon its own axis consists the superiority of the gun over the ordinary cannon. It is a well known fact, that it is impossible to cast balls or bullets in such a way that one side will not be heavier than the other and it is also well known that the circumstance deflects the projectile from its right line.

With small arms this difficulty is overcome by the groove in the rifle barrel, which, being spiral, acts upon the soft substance of the leaden bullet, and gives it a rotary motion before leaving the muzzle of the rifle, which continues until the ball is stopped. By this means the heavy side is alternately turned in all directions, so that any tendency in one direction is immediately counterbalanced by a revolution of the bullet which changes the position of the heavy side and the result is the ball flies in a direct line. Now, however well this plan may answer for small arms and leaden balls, the groove is impracticable for cannon and cast iron balls, and it has long been a problem to discover some means of making rifle cannon.

The Lancaster gun professes to have accomplished this by means of an elliptical bore out of which is to be thrown an elliptical projectile, either shot or shell. Without plates we may not be able to make our readers understand our explanations, but we hope most of them will do so. The gun is large, because it is at a long range that its great precision of aim tells best over the common gun, and its appearance is that of an ordinary large cannon, except that the mouth instead of being circular, is elongated like an egg, having one axis longer than another. We will suppose that the mouth is the largest up and down—that is, that the longer axis is vertical, so that the flattened ball fitting it would stand on its edge; but the bore winds gradually from the mouth to the breech of the gun, so that when the ball is driven home to the proper position when the gun is loaded, it will have turned ¼ around, and will lie horizontally—that is at right angles to the longer axis of the mouth of the gun, and on its side. When the gun is fired the ball must make one revolution for every four lengths of the gun, and thereby counterbalance any imperfection in its shape which would otherwise deflect it. Several of these guns have burst. This is perhaps attributable to the fact that they are used at very long ranges, and were probably overloaded, although it is quite possible, and in fact probable, that forcing the ball to a rotary motion would increase the resistance offered so much as to increase the risk of bursting. Experience will soon test the question.

Discovery of Saline Water.—The Mt. Carmel *Register* is informed by a letter from S. R. Rowan, Esq., one of the company engaged in searching for strong salt water at the Old Saline Works in Saline county, Ills., that the operator lately struck a vein of "salt water equal to any in America—so strong that it will bear an egg—none better at Kanawha." It is the intention of the Company to have their salt works in full operation in a few weeks.

COPPER MINING IN EAST TENNESSEE.

The following extracts from a letter from Mr. Gilbert, President of the Isabella and Polk county copper mines of this State, addressed to Thomas J. Campbell, Esq., cashier of the Ocoee Bank at Cleveland, will be read with interest by the business community. No section of Tennessee—perhaps we might say, no section of the Southwest—is increasing so fast in population and wealth as the copper mining region of Tennessee.

Athens, Tenn., Dec. 6, 1854.

Thos. J. Campbell, Esq., Cash. Ocoee Bank.

Dear Sir: Related as your Bank is to the mining interests of East Tennessee, I have thought that a few statistics respecting that business in Ducktown, might not be uninteresting. During a short trip to the mines I picked up the following facts, to-wit: From the 1st to the 30th of November, the Tennessee Mine sent away about 140 tons; the Polk County Mine over 200 tons, and the Isabella Mine over 300 tons, teamster's weight, all rich ore, ranging from 22 to 30 per cent. copper. It may not be uninteresting to know that the Polk County Mine commenced work about the first of May last, and the Isabella Mine on the 23d of August a year ago. What the above mines did last month, they can continue to do. The Hiwassee and the London Mines sent away very considerable quantities of ore in November, but just how much I am unable to say. * * * * * * There was some $15,000 paid to teamsters last month for hauling away ores. There are some 500 teams employed in the service, beside many others employed at the mines in hauling logs, boards, feed, &c. It requires no small amount of feed to support 500 or 600 teams, of four to six head each, and I trust that after this season there will be no lack of feed near home, not for 600 teams only, but for 1,000 or 1,200 teams, as that number will probably be required another season.

The mines furnish a good cash market for every kind of produce from the farm, besides employment for hundreds of men, and many hundreds of teams. One farmer told me today, as I was coming from the mines, that notwithstanding he had a good crop this year, yet he could not feed all the teams now employed by the mines for a single night.

A railway from the mines to the East Tennessee and Georgia Railroad is all important, and if capitalists from abroad shall consent to aid in the construction of such a road, I trust that the citizens of Polk and Bradley counties will not be backward in coming up to their help. The benefits of a railway will not be confined to the mining interests, but will be felt by every farmer, mechanic, tradesman, and citizen within the district.

Begging your pardon for so lengthy a statement, I remain yours, most truly,

LYMAN W. GILBERT.

—*Nashville True Whig.*

The Great Salt Mines in the Mountains of Virginia.—The State of Virginia is moving in the great work of internal improvement, and is making a railroad that will reach the great salt mines of their mountains, and in a few years that salt will be distributed over the whole of the Eastern States—its superior quality will ensure for it a ready sale everywhere, for it is better worth one dollar per bushel for table use than any other salt that ever came to our market is worth twenty-five cents. It is a pure *chloride of sodium*, and will remain as dry as flour in any latitude from the equator to the pole.

This great salt is in a trough between two mountains, at an elevation of 1,882 feet above the level of the sea, and near the waters of the north fork of Holsten river, a tributary of the Tennessee river, and is near the rivers of the States of Kentucky, Tennessee and North Carolina, where these border on a southwestern point of the State of Virginia.

The fossil salt lies about 220 feet below the surface of the ground, and is encased in a vast deposit of gypsum.

About 10 years since, two boxes of geological specimens were sent to me from these mines and from the surrounding country. In repacking these into other boxes, some pieces of the fossil were put in a box with specimens of iron ore from the great iron ore beds of Northern New York, and remained in that connection until the present year. On being opened, the specimens were all in good order, the salt not having in the least corroded the iron, or produced any rust.

I have no doubt that deposit of salt resulted from volcanic action. New river the head of one of the tributaries of the Great Kanhawha river, is near this salt mine, and is undoubtedly the source of the saline supplies of the deep wells of Kanhawha, but in its course thither it undergoes a change, and when raised from the deep wells is found there to contain *bromine* in great abundance.

The Kanhawha Salines are among the wonders of the world; the salt water comes to the surface from a depth of two thousand feet, and is as cold as a northern blast in winter—thus exploding the theory that the heat increases in the earth *everywhere* as progress is made downward.

The gas which issues from these deep wells is in abundance sufficient to illuminate the entire Northern Hemisphere, and rises with a force that is sufficient to throw a cannon ball a considerable distance.

In the excavations made in the neighborhood of the salt mines of Virginia, the bones of the Behemoth are found of a size indicating an animal as large as the hull of a ship-of-the-line.

I have no doubt the table Salt of our market, will, in three years, be supplied by the Virginia Salt Mines, and even now, our grocers cannot do better than to send to the Salt Mines of Virginia for pure table salt for the supply of their customers who want a good article.

E. MERIAM.

Monetary and Commercial.

Since the dato of our last issue, the most interesting feature that has occurred, is the rise in the Ohio. We have alroady noticed the large quantity of manufactured articles that were waiting shipment and the prospect of immediate returns in the shape of remittances aud drafts. These anticipations have been realized, and a gradual improvement in the aspect of the commercial world may he looked for. The levee presents a scene of greater activity, than at any period during the last six months. It is to be hoped that our city will not be subject to these caprices for many years to come. As our railroad connections are extended to the South-West, they will gradually supersede the necessity of a high river, and tend to equalize the husiness of the year. Such, at least, has been the effects of railroads elsewhere. In the discount market, we have nothing new to add. Before the first there was noticed but little demand for loan, the holiday week being generally dull. Since the first, there has been much inquiry for money; the opening of navigation furnishing facilities for extending husiness transactions, and consequently the wants of the merchants and shippers were increased. We quote a few loans in the regular way at from 10 to 15 per cent. per annum; outside rates well maintained at 1½ to 3 per cent. per month.

Exchange is huying at ahout ½ per cent. premium, and selling at one per cent. on New York aud the East. New Orleans is selling at ½ to 1 per cent. Gold is dull at 1¼ per cent. and scarce, the excess over exchange, is prohahly due to the small supply in the market.

Uncurrent funds are improving. The action of the Convcution of specie paying banks of Indiana, having, undoubtedly, done much toward reviving confidence. Indiana notes are now divided into three classes, State Bank aud Branches bankable, Specie Paying Free Banks at from 4 to 8 per cent. discount, and Non-Specie Paying, good Free Banks at from 15 to 30 per cent. discount.

In stocks we hear of transactions at widely different prices, indicating that there are still parties whose necessities demand a sacrifice, and others who seek investment. There is no douht but that stocks must increase in value, till a price commensurate with the income which they pay is reached.

Advices from the east give some encouragement. Up to Dec. 30th, money is quoted easier, and the market hetter supplied; loans are not so difficult of negotiation, and rates of interest have declined. The larger hanks are extending facilities to customers, when ahility is undoubted.

Specio is more plentiful and shipment to Europe have entirely ceased, while the receipts from California continue to flow in.

There are to be paid in New York, immediately, subsequent to the first, $5,000,000 in the shape of dividends and interest due on railroad, city and county honds, and it is a gratifying fact that these have been provided for at an early date. The *Gazette* says: "The paymeuts to be made by Winslow, Lanier & Co., include the following:—Bonds of the State of Indiana, issued in 1854, for banking purposes; Bonds of the city of Chillicothe, issued to the Marietta Railroad Company; Bonds of the City of Wheeling, issued to the same: Bonds on the city of New Albany, Ind., issued to the New Albany and Salem R. R.; Bonds of the City of Covington, Ky., issued to the Covington and Lexington Railroad.; Bonds of Franklin Co., O., issued to the C. C. and Cincinnati R. R., and to the Xenia and Columbus R. R.; Bonds of Greene county, O., issued to the Xenia and Columbus R. R.; Bonds of Stark co., O., issued to the Pennsylvania and Ohio R. R.: Bonds of Richland county, O., issued to the same road; Ross county, O., bonds issued to the Marietta R. R.; Athens county, O., bonds to the same road; Van Wert, county O., bonds to the Ohio and Indiana R. R; Allen county, O., Alleu county, Ia., and Crawford county, O., bonds, all issued to the Ohio and Indiana R. R.; Ohio and Pennsylvania Railroad Mortgage bonds; Fort Wayne and Chicago Railroad Company; Bonds of Dayton and Michigan Railroad Company; Bonds of Bellefontaine and Indiana Railroad Company; Bonds of Bellefoutaine and Indianapolis Railroad Company.

Duncan, Sherman & Co., day the interest on first mortgage bonds of Ohio aud Miss. Railroad, and second do. do. western division; also on bonds of State of Mo. to the Pacific Railroad Company.

Atwood, Dunlevy & Co., pay the interest on the Milwaukie aud Miss. Railroad Co. honds. Milwankie city do; Columbus, Piqua and Indiana Railroad Company do; Muskingum Company honds; Central Ohio Railroad, city of Zanesville do; do, do, to Cincinnati, W. & Z. Railroad, and same for schools. Fayette Connty O., Bonds, for C. W. & Z. R. R. Company.

There is a favorable change iu the stock market, occasioned partly by the foreign advices, and partly the promptness in providing for the coupons.

Foreign Exchange continues heavy, and rates are declining. Drafts on mercantile houses are sold at 105 to 106¼ and hankers' checks at 107 to 107¾.

GEORGE DARTNELL.

CLEVELAND AND TOLEDO RAILROAD.—We have been furnished with the official statement of the earnings of the Cleveland aud Toledo Railroad.

Earnings for	October, 1853, ...		$59,608.70
Do.	Nov. "		$60,730 20
Do.	October, 1854,.....		$85,745.13
Do.	Nov. "		$77,751.40
Do.	1st week Dec. "		$16,335
Do.	2d do "		$15,142
Do.	3d do "		$18,022

A large amount of pork, beef, flour and wheat passing Eastward from the West.—*Cleveland Herald, Dec.* 27.

CHICAGO AND AURORA RAILROAD.—The earnings of the Chicago and Aurora Railruad to November were as follows:

Passengers,.....	$11,902	32
Freight,.....	25,191	05
Total, ...	$36,896	37

STEAMBOATS IN PITTSBURG.—The Pittsburg *Commercial* has a table of the steamboats registered in that city, for the year ending August, 1854. The number is 61 steamboats, 11,156.17-95 tons; 23 smuller crafts 620.31-48 tons—making a total of 11,776.48-95 tons. For the year to the 1st of December, 68 steamboats registering 13,798.29-95 tons, 23 smaller crafs 620.60-95—making a total for eleven months of 14,418.70-95 tons. The Pittsburg paper publishes this to correct a table giving the amount of steamboat building in the various cities, which entirely excludes Pittsburg.

CANNEL COAL.

Mr. G. A. Vincent has placed upon our table a good specimen of this coal, dug frum his farm in Meigsville township. He says the vein is from twelve to fifteen inches thick, at the surface in the bank of a small stream, and it rests on a small vein of bituminous coal. This coal burns with but little smoke, makes a better light, lasts longer, and leaves less ashes than the coal in ordinary use. It would be especially valuable for cuoking stoves.

Mr. Johnson informed us whilst making a survey of our county for his map, he found good specimens of this coal in Centre township. This furnishes good evidence of the natural resources of the county which it will require time to develop.—*Morgan Herald.*

This is probably a continuation of the deposit mentioned in No. 94 of the Record as having been found below Newark and tested in Boston for making carburetted hydrogen gas. It is an exceedingly valuable mineral and will undoubtedly be a source of great profit.

GALENA AND CHICAGO UNION RAILROAD.—At a meeting of the Board of Directors of the G. & C. U. R. R. on Tuesday last, Flavel Mosely, Esq., was elected a Director of the Company, to fill the place made vacant by the late Jas. H. Cullins, Esq. The appointment will give general satisfactiun, as Mr. Mosely has both the leisure and the disposition to attend to the interests of the Company. They could not have been committed to safer or better hands.—*Chicago Democratic Press.*

FREMONT AND INDIANA RAILROAD.

The Fremont and Indiana Railroad appears, from all accounts tu be progressing finely. The Fremont *Democrat* referring to the work, thinks the track will be ready for the iron, from Fremont to Findlay, by the 1st day of April next. It says very little work remains to be done between these two places, and the estimated cost of completing the ruad ready for the iron, is between $5,000 and $6,000. We quote further from the *Democrat:*

"If no unlooked for stringency in the money market should occur, the iron will be purchased in time to lay the track to Findlay by next fall. The road once open to Findlay, will, by its earnings, materially assist in constructing the balance of the line.

"It is thought, that if times are not unusually hard next summer, the track as far as St. Mary's, embracing a distance of eighty-eight miles, can be made ready for the irun by Autumn uf 1855. Messrs. Shoemaker & Co., who have the contract between Lima and St. Mary's, we learn intend commencing operations next month.

"The outlays of the company during the present year, including construction and engineering account, right of way, and incidental expenses, amount tu about $130,000. About $85,000 of this sum was expended in construction alone. These figures will show that, although there has not been much noise made about the matter, the Fremont and Indiana Railroad has been making first rate prugress during the past year.

"We record this with feelings of pleasure, and trust that the contemplated Sandusky and Fremont road will meet the Fremont and Indiana line upon its first opening."

SOUTHERN WISCONSIN R. R.—The Milwaukie *Sentinel* publishes a report of Mr. E. D. Clinton, of the result of his canvassing tour through the Southern Counties, for subscription to the stock of the Southern Wisconsin Railroad. We extract the following from Mr. Clinton's report:

"The amount of Stock Subscriptions to the M. & M. R. R., on the line between the city of Janesville and Mississippi river, at the date of my first report, was a little short of half a million of dollars. The amount now upon the books, every dollar of which is believed tu be of the most available character, is $950,300, a very large propurtion of which is "farm mortgages." To this amount may safely be added $50,000 from men who are only waiting for an opportunity to subscribe.

In addition to the above amount, the Committee appointed at a meeting uf the citizens of Dubuque held on the 19th inst., pledged to me at least $100,000 of individual cash subscriptions, and at least $300,000 of the Bonds of the city.

The amount now specially appropriated to the construction of thut line of road is as follows, viz:

By Bonds of Milwaukie City,.....	$400,000
" " Janesville City,.....	150,000
" " Dubuque, (pledged)	300,000
New Stock subscribed,.....	950,300
Pledged at Dubuque,.....	100,000
Old Stock subscribed to S. W. R. R.....	30,000
Total,.....	$1,930,300

At Shullsburg, New Diggings, Benton, Jamestown, we had the hearty co-operation of Messrs. Griffith, Townsend, Judge Knuwlton, Earnest, Murphy, and others, who took hold with a determined will. At Shullsburg, aided by such men as I have mentioned, we took in a single day a subscription of $127,000—the largest amount subscribed in any one day on the whole line."

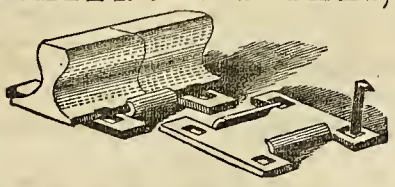
TO RAILROADS AND CONTRACTORS.

HORSE POWERS.—The undersigned being agents for the sale of R. H. Pease formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

GAS.

AUBIN'S PATENT.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

T. WRIGHTSON & CO.,
167 Walnut-st., Cin'ti.



DURYEE & FORSYTH'S
PATENT
PLATFORM SCALES.

WE ARE AGENTS FOR DURYEE & FORSYTH'S UNRIVALLED PLATFORM SCALES, FIRE PROOF SAFES, TRUCKS, LETTER PRESSES, AND SUGAR MILLS.

We deem it unnecessary for us to say a word in their commendation, as their reputation for accuracy, adaptation, and durability, is too well known to require it. HEWSON & HOLMES,
dec27 83 and 85 Walnut-Street.

RAILROAD SPIKES,

WROUGHT IRON

Chairs and Fastenings.

THE undersigned will continue to manufacture with increased facilities, HOOK & FLATHEAD R. R. SPIKES, of all Patterns, WROUGHT and CAST CHAIRS, and FASTENINGS, BOILER RIVETS, BOLTS, SHIP and BOAT SPIKES, &c., &c.

The best quality of refined iron is used, and all orders filled with despatch. J. HOPKINSON SMITH,
No. 25, South Charles st.

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler		Massachusetts
John E. Thayer, Esq.		"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,		Sandusky.
E. F. Osborne, Esq.		Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$220
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.
Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

(On Baltimore & Ohio Railroad, midway between Baltimore and the Ohio River.)

MANUFACTURERS of *Engine Lathes, Planing Machines, Drill Presses, Hand Lathes, and other Machinists Tools.* These tools are built in a superior manner, from the very best materials, and are particularly adapted for railroad shops and all others repairing first rate machinery. Our location is very advantageous for shipping work to the West or South. Orders and communications receive prompt attention. Address

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¼ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.
2d, They are a great deal cheaper.
3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoo & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Johnockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr3 140 and 142 Main street

RAILROAD MAP.

WE have now ready A RAILROAD MAP OF THE WEST, containing ALL THE RAILROADS constructing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a competent hand.

The size of the sheet is 24 by 38 inches, and can be sent by mail.

Price—plain..... 40 cents.
Colored in outlines..... 50 cents.
Full colored ..... 75 cents.

Liberal discounts will be paid to those wishing them in quantities.

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to U. P. JAMES will secure prompt attention

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,
Through Tickets from all Parts of the West,
ARE NOW SOLD IN
Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION
The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart. and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,
The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,
And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.
WM. G. HARRISON, President. *JOHN H. DONE*, Mast. of Transportation,
je. 8† Baltimore.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liablo to become loose, nor "heated" by severe service. The Resevoir is held elose to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from tho journals, while under tho car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without roplenishing the oil, and are not detained from the road for repairs ONE TENTH part of tho time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any otber kind are used.

Tho first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to uso the same, with the subscriber.

WASHBURN WHEEL

Having obtained the *exclusive right* to make this wheel

In Cincinnati, Covington and Newport, they are now prepared to furnish Railroad Companies with that Celebrated wheel, with or without Axles. Also, Journal Oil Boxes of any pattern, and Castings for cars fitted to order at the shortest notice.

Address KECK & HUBBARD,
Fulton Car Works Cincinnati, Ohio.
ap.12 Office 62 East Second Street.

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

J. DAVENPORT.... M. D. WELLMAN.... C. M. RUSSELL

DAVENPORT, RUSSEL & CO.,

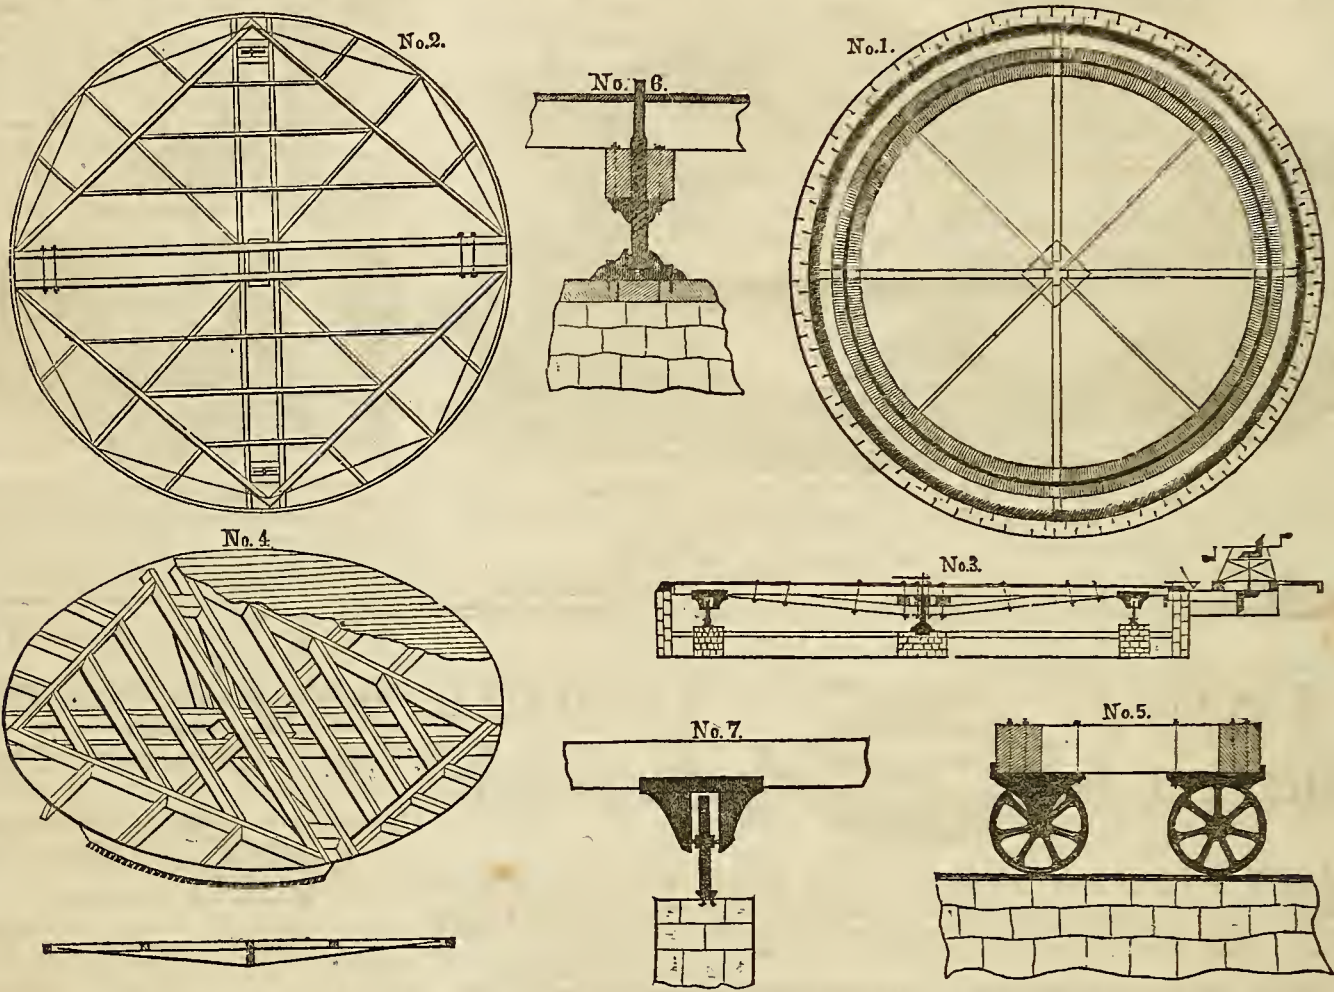
Railway Car Manufacturers,

MASSILON, OHIO.

THE subscriber, late of the firm of Davenport, Bridges & Co., Fitchburgh, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passengor, Baggage, Post Office, Freight, Coal, Gravel or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident that perfect satisfaction can be given in all work entrusted to our care.

We have now on hand the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States.



Feb. 16†* JOSEPH DAVENPORT.

RAILROAD IRON, LIGHT WEIGHT.

470 TONS, 47 lbs. per yard, good quality and pattern, now lying at New Orleans. For terms apply to VOSE, PERKINS & CO.,
ap27-tf New York

CARHART'S IMPROVED TURNTABLE.

Now building for 13 of the Principal Roads in Ohio, Indiana, New York, New Jersey, and North Carolina.

This Table, together with an Engine and Tender of 30 Tons Weight, can be Turned by One Man in 25 Seconds.

RAILROAD COMPANIES in want of *Turntables* of a permanent and durable character, at a low price, are respectfully referred to the annexed references. The undersigned being confident that the manner of turning engines by his Table is the most permanent, expeditious, and cheapest in the United States, solicits the attention of Engineers, and others, to his improvement. The undersigned being a practical mechanic, and having devoted his time, for the past five years, exclusively to the construction of Turn and Transfer Tables, Draw and other Bridges, is prepared with every facility for executing orders in that line with promptness and satisfaction.

The price, which is always based upon the use of the best materials and best workmanship which can be procured in the market where used, can be determined only by the locality.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

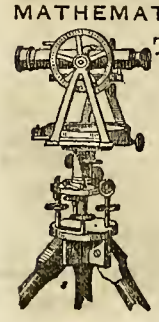

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal

For further particulars please address,

D. M. CARHART, Cleveland, Ohio.

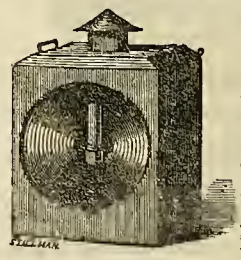
MATHEMATICAL INSTRUMENTS.

T. F. RANDOLPH & BRO.,

N. W. Corner Fifth and Walnut sts.

No. I, 2d Story, Apollo Building,

CINCINNATI, O.,



MANUFACTURERS OF

Surveyors' and Engineers' Instruments, Theodolites, Transits, Levels, &c., &c.,

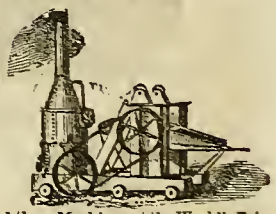
REPAIRING AND ADJUSTING INSTRUMENTS DONE TO ORDER.

Orders promptly attended to.

LOCOMOTIVE LANTERNS.

I AM now manufacturing

LOCOMOTIVE LANTERNS



of the most approved form, with true Parabolic Silver-plated Reflectors, Copper Cases, and in every way equal to the best manufactured in the country.

Orders from Railroad Companies in the West are solicited.

A. S. WINSLOW,

†mr24† 9 and 11 West Second St. Cincinnati.

"GARDNER'S ROCK DRILL."

DESIGNED for Mining, Tunneling, Quarrying Use, and Rock Excavations of all descriptions, by the use of which a saving of 50 to 75 per cent. is made. This drill can be operated by hand, horse, or steam power, and works equally as well horizontally or at any angle, as perpendicularly.

A silver medal, the highest prize, was awarded these Machines at the World's Fair

Applications for Territorial Rights and Machines must be made to the Patentee.

G. ARTHUR GARDNER,

nov17† Trinity Building, N. York.

Railroad Record.

E. D. MANSFIELD, - - - - - - - Editor.
J. A. JAMES, W. WRIGHTSON, - - - Associate Editors.

CINCINNATI:
THURSDAY MORNING,.....JAN. 11, 1855.

E. D. MANSFIELD,
May be found at the office of the *Railroad Record*, 167 Walnut st., between the hours of 11 A. M. and 1 P. M.

Railroad Printing.

WE have now attached to this office an extensive Composition and Press Room and Bindery, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish Railroad and other Reports, with or without Maps or other Illustrations, gotten up at short notice and in superior style. Also, Blanks of any description, adapted to the wants of the various departments of the Railroad service, and to the wishes and tastes of the parties.

Also, Railroad Tickets and Conductors' Checks. Our patent Card Press, enables us to supply any demand at Short Notice and in Unequalled Style.

Also, Blank Books, ruled to any pattern, with or without Printed Headings, and bound in the most substantial manner.

With the numerous facilities for doing the Best Work, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,
Railroad Record Office, 167 Walnut st Cin.

RAILROAD EARNINGS.—We would call the attention of Superintendents to the importance of regular returns of earnings. The regular publication of earnings would do much to keep up the confidence of Stockholders in the soundness and security of the roads which publish them.

LITTLE MIAMI R. R.

A day or two ago a splendid new passenger locomotive, the "John Kugler," was put upon this road. The locomotive is an outside connection machine, and is similar to the favorite NAT. WRIGHT, which has done good service; it is from the manufactory of Messrs. Moore & Richardson successors to Harkness & Co.

HUNT'S MERCHANTS' MAGAZINE for January is received. Also, DE BOW'S REVIEW for same month, filled with interesting commercial and statistical information.

THE BANKER'S ALMANAC FOR 1855. The Advertisement of this important publication will be among the new advertisements of the week.

For sale by J. Smith Homans, 70 Wall st. New York.

RAILWAYS OF THE SOUTH--INCLUDING THE STATES OF VIRGINIA, MARYLAND, THE CAROLINAS, AND GEORGIA.

The first successful Railway built in the United States was that out of Baltimore. The little road at Quincy was merely used for a stone quarry. The Baltimore road was commenced with the avowed design of crossing the mountains. It was, with great difficulty, pushed forward to Frederick; then after a long time got to Cumberland, and there stopped for several years. At last, it has reached the Ohio river, and there connecting with the Ohio Central Railroad,—Baltimore itself has now a Railway to the Mississippi.

In Virginia and North Carolina a Railway has long been in operation, from Fredericksburg, through Richmond and Petersburg, to Wilmington. In Georgia, the Empire State of the South, there is an extensive and ramified system of Railways. So also in South Carolina. Thus, the old Southern States have made good progress in Railways; and although it has been customary to speak of the South as backward in public improvements, yet, it will be seen by the following review, that they have performed nearly or quite as much railway work, in proportion to population, as others.

In this list, as in all the States, we put down to each State only the part of any line which lies in *that* State:

RAILWAYS OF VIRGINIA.

	Complete.	In Progress.
Baltimore and Ohio	290 miles	—
Richmond & Frederick	75 "	—
Richmond & Petersburg	22 "	—
Petersburg & Weldon	64 "	—
Winchester & Potomac	32 "	—
Appomattox	10 "	—
Virginia Central	138 "	60
Petersburg & Lynchburg	123 "	—
Richmond & Danville	95 "	40
Virginia & Tennessee	106 "	85
Seaboard & Roanoke	70 "	—
Manassa Gap	88 "	60
Orange & Alexandria	88 "	—
Covington & Ohio	— "	200
North Western	— "	120
Independence	— "	36
Aggregate	1,201	601

Of these, continuous lines are formed as follows:

1. *Frederick & Weldon*.....160 miles.
2. *Petersburg & Newbern* Tennessee Line. .....229 miles.
3. Richmond to the Ohio.....398 miles.

Of the last line, 240 miles, from Staunton to the Ohio, remains to be completed, and there is no public work in Virginia which demands more regard from her people. It should have been the first thing done in that State.

RAILWAYS IN NORTH CAROLINA.

	Complete.	In Progress.
Wilmington & Weldon	162 miles	—
Raleigh & Gaston	97 "	—
Seaboard & Roanoke	10 "	—
Wilm'ton & Manchester	60 "	—
Charlotte & S. Carolina	15 "	120
Salisb'y & French Broad	— "	130
Blue Ridge	-- "	35
N. Carolina & Tenn.	— "	75
Aggregate	344	360

The *Wilmington and Manchester* Railway, in connection with the Wilmington and Weldon, and the Virginia and South Carolina Railways, make a complete *interior line of Railway* from the Potomac to Richmond, Wilmington, Charleston, Augusta, and Savannah.

RAILWAYS OF SOUTH CAROLINA.

South Carolina was early and efficiently in the field in the construction of Railways. The South Carolina Railroad was one of the earliest, and has been one of the most profitable Railways. In the last twenty years, Charleston and South Carolina have been most earnest and zealous in a desire to connect Charleston and the Valley of the Ohio with Railways; and it is now hoped this grand plan will be successful, by means of the Blue Ridge Railroad, to which the South Carolina Legislature has just granted an aid of two millions of dollars. As South Carolina credit stands high, this will undoubtedly be sufficient to enable the company to carry on the work of construction. The following is a list of the Railroads of South Carolina, viz:

	Complete.	In Progress.
South Carolina R. R.	137 miles	—
Columbia Branch	66 "	—
Camden Branch	62 "	—
Wilmington & Manchester	111 "	—
Charlotte & S. Carolina	94 "	—
Greenville & Columbia	143 "	—
King's Mountain	22 "	—
Laurens	32 "	—
Abbeville Branch	12 "	—
Anderson Branch	10 "	—
Spartanburg & Union	— "	60
Charleston & Cheraw	— "	130
Blue Ridge (in Carolina)	— "	50
Aggregate	689	240

The *South Carolina* Railway to Augusta makes a connection with all the Georgia R. Roads, and with Tennessee at Chattanooga. It will be seen from the above that South Carolina has been a zealous promoter of Railways.

GEORGIA RAILWAYS.

The State of Georgia has been called the Empire State of the South, on account of its great enterprise and rapid growth, and in no small degree deserves the appellation. Since 1836, it has been most energetic and successful in the construction of Railways. The following is the list of her works:

	Complete.	In Progress.
Central Georgia	191 miles	—
Macon & Western	101 "	—
Western & Atlantic	138 "	—
Georgia	171 "	—
South Western	49 "	—
Atlanta & Lagrange	87 "	—
Milledgeville & Eatonton	38 "	—
Augusta & Waynesboro'.	51 "	—
Rome & Kingston	19 "	—
East Tenn. & Georgia	15 "	—
Muscogee	100 "	—
Ogletborpe Branch	22 "	—
Brunswick & Pensacola	— "	180
Savannah & Florida	— "	160
Macon & Fort Gaines	— "	120
Aggregate	982	460

Of the above roads, the following continuous lines are formed:

1. Savannah to Chattanooga. (Tenn.) via the first three,	430 miles.
2. Augusta to Chattanooga. via the Georgia & 2d & 3d lines	410 miles.
3. Savannah to Columbus, via Macon,	291 miles.

It will be seen that Georgia is the *first* Southern State which has touched the *Valley* of the Ohio, at Nashville, on the Cumberland, a branch of the Ohio. This is done *via* Chattanooga, which makes 581 miles of Railway from Savannah, and 561 miles from Augusta to Nashville. From Charleston (S. C.) there is a continuous line of Railway to Nashville, making 698 miles. The connection between Nashville and Cincinnati, on the one hand, and Cairo and Evansville on the other, should be urged forward in the South, when the whole southern border will be at once united with the north-west.

RAILWAYS OF FLORIDA.

Florida being a small State in population and resources has not yet accomplished much.

	Complete.	In Progress.
Florida & Alabama R. R.	—	40 miles.
Pensacola & Fort Gaines	—	80 "
Pensacola & Savannah	—	120 "
Pensacola & Jacksonville	—	320 "
Aggregate	—	560

These roads are not strictly *in progress*, except the first; but they are those which are necessary to Florida, and must sooner or later be accomplished. The Alabama and Florida Railroad is the one which, connecting with other roads in Alabama and Tennessee, will connect Pensacola with all the States north to Cincinnati, and even the Straits of Mackinaw, making one of the great *arial lines* of the United States.

RAILWAYS OF MARYLAND.

The only considerable Railway in Maryland is the Baltimore & Ohio R. R., which is the creation of the city of Baltimore; but that work is for the most part in Virginia, and has its termination at Wheeling. The following are the Maryland roads:

	Complete.	In Progress.
Philadelphia & Wilmington	55 miles	—
Baltimore & Susquehanna	35 "	—
Baltimore & Ohio	90 "	—
Washington Branch	36 "	—
Frederick Branch	3 "	—
Annapolis	21 "	—
Aggregate	240	—

The *Baltimore & Ohio* Railroad is a noble monument to Maryland enterprize, and except the Pennsylvania Central is the only Railroad which is *directly* between the Atlantic and the Ohio Valley. Baltimore and Maryland will reap a harvest of wealth and commerce from this great work.

We now give a Summary of Railways in the South proper, viz:

	Complete.	In Progress.
Maryland	240 miles	—
Virginia	1,201 "	581
North Carolina	344 "	360
South Carolina	689 "	240
Georgia	932 "	460
Florida	— "	560
Aggregate	3,456	2,201

There are in the Railways of the South *three* very important lines—viz: that of Baltimore with the Ohio Valley; that of Virginia and Tennessee—through the valley of the Mountains—and that of S. Carolina through the Blue Ridge Railroad (which is not completed), with the Valley of the Ohio. There is no reason why Virginia should not complete her Central Road to the Ohio. But she seems strangely oblivious to her greatest railway interest.

SKETCHES OF CITIES IN THE WEST, NO. 2. TOLEDO, ON THE MAUMEE.

The Lake cities are now becoming among the most interesting towns in the country. Of these, there will probably be in all about twenty. There will obviously be some half dozen cities whose existence has scarcely yet begun. Of these, one will probably be at the Straits of Mackinaw, and one at the head of Lake Superior. The principal ones now growing up are, Oswego, Buffalo, Cleveland, Sandusky, Toledo, Detroit, Chicago, and Milwaukee. At present, we will briefly sketch Toledo. This town was laid out sometime after the last war with Great Britain, by a company, of which Major Oliver, Martin Baum, and William Worthington were among the principal proprietors. It lies near the mouth of the Maumee river, and being at the connecting point of the Maumee and Wabash Vallies with Lake Erie, has most decided advantages as a commercial point. Its topographical situation has made it the outlet of the Miami Canal to Cincinnati, and of the Wabash Canal to Evansville. The former is 315 miles in length, including Branches, and the latter 470; so that Toledo has near 800 miles of Canal navigation. In addition, it is connected with Chicago, and through that with Galena and St. Louis, on the Mississippi river, by Railroad; and on the other hand, with Cleveland and Buffalo by the Lake Shore road. In commerce, therefore, it has great advantages, and is a great outlet for Western produce. The following are some of the Exports of Toledo for 1852, since which we have not the returns in full:

Flour	415,817 bbls.
Wheat	2,812,216 bush.
Corn	4,107,839 "
Pork	51,177 bbls.
Lard	134,155 kegs.
Beef	28,198 bbls.
Whisky	53,704 bbls.
Wool	748,600 lbs.

This is an immense amount of produce to be shipped from one Lake port. The crops of grain in the two last years have been so deficient, that it is probable there has been no increase of exports. It is evident, however, that Toledo is a very important commercial point.

Its growth, till within the last four or five years, has been much less than some other Lake towns, and much less than it seemed probable it would be with such advantages. Within a few years, however, it has sprung up, and has taken rank among those places on the Lakes, which must eventually be large cities. The following is the population at different periods:

In 1830	500
In 1840	1,222
In 1850	3,829
In 1854	8,700

In 1860, its population will probably reach 20,000. The time will come when it will equal probably any town on the Lakes, unless it be one yet to be founded on the head of Lake Superior.

REVELATIONS OF THE BAROMETER.

The following interesting communication was recently addressed to the French Minister of War, by M. Le Maout, a Chemist of St. Brienne:

St. Brienne, Oct. 27.

Monsieur Le Ministre.—I have occupied myself since the commencement of the Eastern War, with a series of observations on the modifications which the atmosphere experiences from the cannonades that take place. Those observations are made every three hours.

I have collected, on the effects of cannon, facts of the highest interest, which I render intelligible upon paper by the aid of figures, a specimen of which I send you, extracted hastily from the results of my observations, and which represent the comparative effects of the cannonades of Odessa, of the battle of Alma, of the day of the 6th of October, (cannon fired at the Invalids', of the opening of the bombardment of Sebastopol, and of the day of the 25th of October.

I hope to be able to establish that the barometer is not, as is commonly thought, an instrument merely intended to indicate rain and fine weather, but a mobile apparatus, excessively sensitive, which places us in communication with all great atmospherical phenomena.

What is remarkable in this instrument is, that at from 600 to 800 leagues of distance an impression is produced on it in a few hours by the discharge of cannon. Observed with care and intelligence it cannot fail, in certain circumstances, to become of the highest utility in the time of war.

The object to which I venture to direct your attention is this:

I have no occasion to apprize you of the commencement of the bombardment of Sebastopol, as you have already received the news of it officially, but I can announce to you with a certainty which will not be belied by the facts, that the day before yesterday a cannonade such as has not taken place during the year which is about to elapse, even comprising those of the siege of Silistria and of the bombardment of Odessa, commenced in the morning before Sebastopol.

Be good enough to cast your eye over the table that I send you. You will see there that in 48 hours the barometer rose 30 millimetres, and that the figure which represents this rise, comparatively to those produced by the other bombardments, is almost vertical, an index, with the other signs by which it is accompanied, of the intensity of the action of the cannonade.

In a few days you will receive from Sebas-

topol news of the 25th, which will give you full information of what occurred on that day, which has proved, I have no doubt, one of the most memorable of the whole campaign.

In the meanwhile I remain, etc, etc.,

CH. LE MAOUT.

It is scarcely necessary for us to add that the information contained in this letter was subsequently confirmed by the facts.

The above is an interesting fact, and one of the general class which was developed by Espy, and other experimenters on the theory of storms. Gunpowder in its solid state, is a mere mechanical mixture of nitre, charcoal, and sulphur. Now, the moment a spark reaches it, it is converted at once by chemical action, principally into three gases, carbonic oxyde, sulphurous acid and nitrogen, accompanied with a small amount of the vapor of water. These gases, at the temperature at which they are evolved, occupy more than 2000 times the volume of the gunpowder—that is, one cubic inch of gunpowder when exploded, forms more than 2000 cubic inches of these gases, at the temperature of chemical action, and hence the tremendous force of the explosion. Now, it is easy to perceive that the explosion of such a vast amount of gunpowder as is necessarily expended in a battle in which from 80,000 to 100,000 men are engaged, must evolve a vast amount of gaseous matter; and this forcing itself into the surrounding atmosphere, must give rise to greater density in the neighborhood of the fight. The atmosphere then being an elastic fluid, communicates pressure in every direction in its effort to restore an equilibrium of density; and hence this compresssed air and gas spreads in every direction, very much after the manner of the wave which succeeds the dropping of a pebble into calm water, and not, as erroneously supposed, by increasing the height of the atmosphere. Now, the barometer is an instrument which accurately determines the weight of the column of air above it; and this is, in general, affected chiefly as in the instance under consideration, by change of density, not height. It is true, we may safely suppose that the upper surface of the atmosphere is disturbed by waves and undulations like the surface of the ocean, but the increase of weight arising from the height of these waves would be seen to be very inconsiderable when we consider the extreme rarefaction of the air in its upper stratum; whereas the increase of density due to pressure can be shown by experiment to be considerable.

The barometer then tells the amount of this pressure, just in the same manner as it tells of the rarefaction of air preceding a storm.

There is another curious fact in connection with the atmospheric phenomena of cannonading. The sudden increase of density resulting from the explosion of the gunpowder, has a tendency to produce, for the moment, fair weather, clouds seeking the least dense portions of the atmosphere; and hence, such expressions as the "sun of Austerlitz," are but the common place acknowledgment of a great scientific truth, observed but not understood. But further, the gases, when exploded, are of a temperature of nearly 600 degrees Fahrenheit; whereas the atmosphere usually averages not more than 60 degrees; now, here again there is another principle involved: the gases gradually assume the temperature of the atmosphere, and when cool occupy only about one-third the space they filled when first evolved, and hence directly succeeding the cannonade, there is a great diminution in the volume occupied by the mixed air and gas; and in consequence a rush of air and clouds from the surrounding higher regions of the atmosphere and usually a storm.

These are curious facts attested by experience as well as theory, and owe their variations to fortuitous circumstances, such as the rapidity of the discharges, duration of the fight, etc., which produces various interesting modifications in the phenomena.

Now, it may be asked, of what use is this curious application of science? The prophecy of the observer at St. Brienne, shows, without further proof, that a careful observation of barometric phenomena will mark the time of such tremendous events as have lately happened in the Crimea, and affords another instance of the application of science to the practical business of life.

Communications.

INDIANA AND ILLINOIS CENTRAL RAILWAY COMPANY.

INDIANAPOLIS, Dec. 20th, 1854.

EDITORS RAILROAD RECORD:—The constant inquiries of persons feeling an interest in the construction of our road, has induced me to prepare a brief circular, embodying such information in regard to the progress of the work, since the annual meeting in May, and the prospects for the future, as the press of other engagements and the data within my reach, will permit.

The panic which has prevailed during the past season, and which has proved so disastrous to many of the infant enterprises of the country, has given rise to much apprehension and anxiety. Of course all would feel solicitous to know whether our position is such as to justify the apprehension that we must succumb for the present to the pressure, and await more prosperous times for the building of our great road. Being fully confident of our ability to progress with the work without any suspension, and being sustained by a unanimous concurrence of the Board of Directors, I lay before the stockholders the views entertained by them on that subject.

All will remember that when the project for building a railroad to connect the capitals of Indiana and Illinois, and thus fill up the last link wanting to connect the vast regions west of us with the Atlantic, by the most direct routes, the country was in a flood-tide of prosperity. Money was abundant, and was obtained with the utmost facility. Any railroad presenting fair prospects of remunerating its builders, was sure of raising the money for its construction by the sale of its bonds at reasonable rates. But by the time we had placed ourselves in a condition to commence active operations, and put our securities in the market, a reverse had taken place. Money became apparently scarce; the price of bonds and shares rapidly depreciated, and it became impossible to negotiate the bonds of new roads on a scale of sufficient magnitude for extensive operations, except at the most ruinous sacrifices. In this condition of things it became a question, what should we do? We had finished the location of our line; we had succeeded in closing a most favorable contract for the construction and equipment of the road; had secured the right of way, with trifling exceptions, on very favorable terms; and had laid a very substantial basis for our enterprise by a local subscription of near two millions of stock; and the work of construction was commenced under favorable conditions. It was manifestly our interest to avoid a suspension of the work, with all its accompanying disasters, if we were able. We must adapt our course to the altered state of things. If we could not prosecute the whole work at once, with rapidity, it was in our power to operate on a smaller and slower scale. We could move along cautiously, using our own means as far as they could be made available, avoiding the creation of embarrassing debts, and thus keep alive our existence and our credit, till the storm should blow over. This has been the policy in the prosecution of the work.

The force upon the road has been kept up uniformly, at such a point as it was supposed the current means of the Company would justify, and so far successfully. The principal reliance has been, of course, upon the cash subscription, and I am gratified in being able to state that the collections, considering the financial distress of the season, and the failure of the crops, have exceeded the most sanguine expectations.

The amount of construction also has exceeded what was anticipated. Since my annual report to the Board in May last, our able and efficient contractors, Messrs. M. C. Story and Co., have been steadily engaged in the prosecution of the work; and the amount actually done, though small for more prosperous times, is large when we consider that it has been accomplished in spite of a panic which has put a total stop to most of the new railroad enterprises of the country.

The total amount of construction (grading and bridging) done up to Dec. 1st, 1854	$239,800
Under the contract, this is accounted for and paid thus; 10 per cent reserved, (to be paid in bonds)	$ 23,980
Cash	129,492
Stock	86,328
	$239,800

The first division let, extending from the Wabash river at Montezuma, to the Chicago branch of the Illinois Central, 51 miles, is already in such a state of forwardness that it can, with a moderate increase of force, be made ready for the iron early in the ensuing season.

On the second division let, from Indianapolis to Bainbridge, at the intersection with the New Albany and Michigan City railroad, considerable progress has been made in all the heavy sections, as also on heavy work at the crossing of the Sangamon, near our western terminus.

Such is the present condition of the work. The question to be determined is, whether, having expended so much, we shall steadily pursue the policy hitherto acted on, and continue the prosecution of the work as speedily as in the severe financial depression our own means will enable us to do? I am confident every man along the line of the road, every man in any way interested in the enterprise, will at once answer, we must build the road; we *can* do it. Not so fast as would be desirable, not so fast as we would have done in other times, but yet with absolute certainty. We have the means, if we have the nerve to use them. We have still remaining uncollected about two hundred thousand dollars of sound, solvent, cash subscription. We have over one million and a half of dollars' worth of real estate, from which, with care and prudence, we shall with absolute certainty, realize that sum. It cannot be used as rapidly as a cash subscription, but can still, within some reasonable time, be made available in the construction of the road. By a steady pursuance of the same policy of working on our own means, as fast as they can be made available, increasing our subscriptions according to our ability, and the exigencies of the work, and expending our money at such points as can be made most immediately available, we make the ultimate completion of the work a certainty.

In order to do this advantageously, it will be indispensably necessary to increase our stock subscriptions. In the years of prosperity lately passed, the two millions of stock subscription would have constituted an ample basis for the construction of an ordinary road. A road possessing the indisputable merit of ours, could have been built with the utmost ease and facility on such a basis. The financial pressure will make it necessary to rely more than heretofore upon our local resources.

We have every inducement to strain every nerve to accomplish success. When built, no one can doubt the value of the investment. It is shown by the census, that no line possesses more of the elements of local business. The vast deposits of superior coal and iron; the abundant lumber on the eastern half of the line; the immense agricultural production, and the return of goods in exchange, will furnish all that could be asked in the way of local business.

Looking beyond the immediate local resources of the line, the prospect is equally flattering. Ours is only a link connecting the great system of roads centering at Indianapolis, with that having its focus in central Illinois. To all the vast regions westwardly, it furnishes the shortest outlet to the Atlantic seaboard, by all the direct routes radiating from our eastern terminus. A knowledge of the character of the country it traverses, and an inspection of the map, is sufficient to show that when in operation it will yield a handsome per cent. on its cost.

Success in such an enterprise is worth all the struggle to gain it. There is means enough along the line to steadily press the work forward to completion, nothwithstanding the troubles in Wall street. It only requires the will to do, and the energy to persevere. The Board of Directors at its last session, convinced, on the fullest examination of our resources and prospects, of the soundness of these views, determined to make another effort to increase our stock subs'n.

We must use our cash subscriptions and other means, in the grading and bridging, as rapidly as possible, and in the meantime by additional subscriptions of land, be able, when we shall be ready to purchase iron, to present securities which, considering the eminent merits of the road, and the sound basis of real estate, will command money on favorable terms. A moderate increase of cash subscriptions will enable us to place the work of construction during the ensuing summer in such a state of forwardness as will enable us to open negotiations for iron advantageously. We cannot in the present state of the times expect aid from strangers. We must rely on ourselves. We appeal to those who live along the line of the road, and have a local interest in its construction. Those who have not taken stock, are earnestly requested to consider, whether it is not their interest to aid us now, when it is demonstrated that their aid will insure the success of the enterprise in which they have so direct and vital an interest. Those who have already subscribed cash stock, will see the indispensable necessity of a prompt payment of the assessments: and as an inducement to a further subscription, have the additional motive of insuring the speedier completion of the road, and thus making productive at an earlier day, what has already been expended.

Very truly yours, A. L. ROACHE, Pres.

Railroads.

CINCINNATI AND CHICAGO R. R.

The annual meeting of this company was held at Newcastle, Ind., on Jan. 1st, and the following gentlemen elected directors for the ensuing year:

Hon. C. B. Smith, R. M. Corwine, R. M. Moore, J. S. Wayne, John Swasey, and S. J. Walker, Cincinnati; George P. Duell, Lawrenceburg; Sol. Meredith, Cambridge; M. L. Bundy, Newcastle; J.W. Ridgeway, Madison county, Ind.; Wm'son Wright and G.W. Blakemore, Logansport; T. J. Sample, Muncie.

The Board on the same evening organized by electing Hon. C. B. SMITH President, John W. Grubbs Secretary for the office at Newcastle.

On the evening of the same day, there was a large and enthusiastic meeting held to consider means of affording prompt assistance to the company in its present embarrassments. The Courier says "the room was densely crowded at an early hour. Dr. Joel Reed was appointed President and John W. Grubbs and Thomas Newby, Secretaries. Mr. Smith, President of the Cincinnati and Chicago R. R. Co., took the stand, and at once entered into a clear, free, honest, and faithful exposition of the affairs of the company, showing its means, liabilities, its dangers, its hopes and fears. His speech of two hours, which we shall not do him the injustice of attempting even a synopsis, was a most eloquent and masterly triumph, and at the close those present manifested their appreciation of the importance of the work and their faith in its management, by subscribing promptly, on the spot, over $15,000 to the proposed loan for extricating the Company from its embarrassment and pushing the work to Logansport. We learn that considerable amounts have since been added to the loan, and if other places equally interested will emulate the example of Newcastle, the loan can be fully made up, and the speedy completion of the work rendered certain."

The plan of this loan is the same as mentioned in the Record No. 95, and it is to be sincerely hoped that the whole loan will be taken up. As an enterprise of vital importance, it is to be much regretted that it has been allowed by the people residing along its line and at its termini to suffer for want of the small amount of means deemed necessary at the present moment. Passing, as it does, through a perfect garden along its whole line, and uniting Cincinnati with the most thriving city in the West, or even in the country, the Cincinnati and Chicago R. R. cannot fail to be a paying road; and the fact that the owners of its stock have been willing to sacrifice it to a groundless panic, is only another feature among the many strange extravagances of the past year.

N. E. AND S. W. ALABAMA R. R.

Our readers will remember that in our last notice of this road we announced that nearly a sufficient amount of stock had been taken to complete the entire grading from Chattanooga, in Tennessee, to the point where it intersects the Brandon and Mobile roads, and leave an independent balance of $600,000. The balance has been subscribed, and a formal commencement of the work been made at several points. The ceremony of breaking ground took place at Tuscaloosa on Dec. 7, at Eutaw on the 9th, and at Livingston on the 11th. The event was hailed as a jubilee by the people, and celebrated in a becoming manner.

This road, leaving the Brandon road at Livingston, crosses the Tombigbee and striking the Black Warrior at Eutaw, follows the valley of this river through Tuscaloosa; thence crossing diagonally the water shed between the Black Warrior and the Coosa, passes the coal fields of Alabama, and strikes the Coosa at Gadsden; thence follows the divide between the head waters of the Coosa and the Tennessee to Chattanooga, on the Tennessee. Here it forms an important connection on the east, by means of the Western and Atlantic R. R., with roads striking the seaboard at Charleston and Savannah; and by means of the East Tennessee and Georgia railroad with roads to Norfolk, Richmond, and Baltimore. On the west, it forms a direct connection with Memphis, by the Memphis and Charleston railroad, and with Nashville by the Nashville and Chattanooga railroad. Its southern connections extend to Vicksburg, New Orleans, and Mobile. Hence it will be seen that this road will open at once the region through which it passes, to the commercial intercourse of the whole country.

MISSISSIPPI AND TENNESSEE RAILROAD.

This road is one of the chain of railruads designed to connect Memphis and Mobile, and as such, is an interesting one, in a commercial point of view. Commencing at Memphis it runs nearly south to Hernando, and thence south by east to Grenada. At Grenada it connects with the line of the Grenada and Enterprise Railroad, through Greensboro' and Philadelphia to Enterprise, on the Line of the Mobile and Ohio Railroad, and thence by the last road to Mobile. On the north, crossing the Mississippi, it connects with the line of the Memphis and St. Louis and Iron Mountain railroads to St. Louis, thus forming a connecting link in the chain from St. Louis to Mobile.

The first 60 miles of the road from Memphis have been located, and the engineer reports favorably concerning the alignments and gradients; the maximum grade is 47½ feet per mile, and the minimum radius of curvature 1,910 feet.

There are now under contract 37 miles of grading, from Memphis out, to be finished by July 1st, 1855, and 12 miles more to be finished by Jan. 1st, 1856, making a total of 49 consecutive miles. Contracts have also been made for the bridging, trestle work, bridge timber, bridge masonry, cross ties and tracklaying from Memphis to the south bank of Tallahatchie river, a distance of 55 miles, to be finished by Jan. 1st, 1856; one-fourth of all the work, with the exception of part of the trestleing, to be paid for in stock.

The present means of the Company are as follows:

Individual cash subscription	$534 725
Memphis City bonds	250 000
Tennessee State bonds	97 500
Total	$882 225

In additiun to this, the stockholders have resolved to issue bonds to the amount specified in the charter ($100 000), and as soon as 60 miles are graded and 40 ironed and equipped, to increase the amount of bonds to $700,000. The estimated cost of the road is $2,000,000.

The directors for the ensuing year, are Henry C. Walker, J. M. Patrick of Memphis, Tenn.; Henry Dockery, J. C. N. Robertson of Desoto County, Miss.; F. M. White, David S. White, Thomas Bradford of Panola County, Miss.; Nathaniel Howard, and Sam. Garner of Yallabusha County, Miss.

The next annual meeting of the stockholders will be held in the town of Panola, on Oct. 12th, 1855.

Selected Railroad News.

RAILROAD GRANTS OF LAND — THE CAIRO AND FULTON RAILROAD AND OTHERS.

As this subject is now becoming painfully interesting, we shall endeavor to throw some light upon it, by referring to the action in similar cases in other states, where grants were obtained under provisions identically the same as those contained in the Cairo and Fulton grant.

Sept. 20th, 1850, Congress granted alternate sections of the public lands to the states of Illinois, Mississippi, and Alabama, in aid of the cunstruction of a road from Chicago to Mobile.

Illinois having about the year 1836 or '37 entered upon a system of internal improvement and created a large debt, became insolvent, and subsequently amended her constitution so as to prohibit the state authorities from pledging the faith of the State in such works. She had spent upon the Illinois Central Railroad, in right of way, deposits, grading, etc., upward of 2,000,000 of dollars. After obtaining the grant of land, above noticed, she abandoned the project as a state work, granted a charter to a new company and transferred to it, all the work she had done, the right of way she had purchased, and the grant of lands, only requiring the company to deposit in her Treasury, as a security that fifty miles of the road be completed, the sum of 2 or 300,000 dollars, which was to be returned when completed. Thus it will be seen that the grant of lands and two millions of dollars worth of actual property besides, were acquired at no other expense to the company than the loss of the interest on the deposit for a few years.

Alabama granted her lands to build the portion of the road through her limits with no other conditions than those contained in the act of Congress. Here is the law:

AN ACT accepting the donation of land, made by the Congress of the United States, to aid in the construction of a Railroad from the city of Mobile to the mouth of the Ohio river.

SECTION 1. *Be it enacted by the Senate and House of Representatives of the State of Alabama, in General Assembly convened*, That the lands within this State, which, under the said act of Congress, have been, or may be hereafter, entered in conformity with its provisions, shall vest in full and complete title in the "Mobile and Ohio Railroad Company," for the purposes set forth in said act of Congress, as soon as the said company shall execute and deliver to the Governor of the State, a sufficient bond faithfully to use the said lands for the purposes of its donation, and abide by and perform the provisions and conditions, in the said act contained.

Approved, Dec. 1st, 1851.

Under this act of the State, the road is now progressing rapidly through Alabama—under any other restrictions than those proposed in the act of Congress, the work would have been a failure — an utter failure for the want of inducements for capitalists to embark in it.

In Mississippi the grant was conferred upon the company in the same manner as in Alabama, only requiring the company to reimburse the State for the expense incurred by her in selecting the lands. Mississippi has also by law exempted all railroads from taxation.

Thus have been granted the lands given these States. The restrictions and burdens imposed by Congress have been considered sufficient to protect the interests of the general government and of the respective States. And the actions of these States have worked well — the result is, the rapid progress of the wurks in consequence of the willing aid rendered by men who possess capital and wish to invest it profitably.

Many here are anxious to tie up the Cairo and Fulton Railroad with restrictions that will render this, the most munificent grant ever made by Congress, utterly worthless, by deterring capital from seeking an investment in the roads projected by it. In the wilderness that Arkansas presents to the traveler as he passes through it, there are few inducements beside this grant of land and the natural products yet undeveloped, to invite monied men to expend their means in our midst. We must be liberal. If Mississippi, Alabama and Illinois were compelled to be liberal, how much more necessity is there for liberal action upon the part of Arkansas!

We hope no one will cherish the vain delusion that this grant of lands alone, and that, too, under the most exacting conditions, will build our roads. It will not — it is impossible.—*True Democrat, Little Rock.*

NEW ORLEANS AND GREAT WESTERN RAILROAD.—Col. Wm. S. Campbell, the President of this Company, has succeeded in selling the bonds of the Company, at good rates, to the amount of £65,000, or upwards of three hundred and fifteen thousand dollars. The sum realized will be sufficient to pay up the advances made by Messrs. Jas. Robb and Co., to the road, and also perfect the road sixty-five miles beyond the point it has now reached in the State of Mississippi. In addition to this negotiation, the President has succeeded in purchasing a large quantity of iron on very liberal terms.—*Chattanooga Adv. Dec. 23.*

CHICAGO AND MILWAUKEE RAILROAD----A CELEBRATION IN PROSPECT.

The iron on the Chicago and Milwaukee Railroad is now laid to within four miles of Waukegan, and the "last rail" between Chicago and that city will be put down on or before Monday next, when the cars will run regularly, and we shall be brought when once the road is ballasted, within an hour's ride of our beautiful sister city north of us. The road will be finished to the State line several miles north of Waukegan, in January.

We learn that arrangements are in progress to have the celebration of the opening of the road on the 8th of January, a week from next Monday. Extensive preparations are being made, and our citizens may expect a right hearty welcome from our neighbors down the lake.

The rapidity with which this road has been constructed, in spite of the financial embarrassments and the sickness of the past summer, is another striking example of what western energy can accomplish. It was commenced about the 15th of April. Within eight and a half months, forty miles will be put in operation, and what is specially worthy of remark, a man was sent to Europe in the meantime to purchase the iron, and it was imported and now forms a part of one of the most important roads in the State. The President of the road, Hon. Walter S. Gurnee, and the enterprising contractors, Messrs. Stone and Witt, deserve the thanks of the public for the energy which they have manifested in pushing forward this important work.

The prospect now is that the Wisconsin end of the line will be completed on or before the first of April. We learn that an eastern capitalist of large means has taken hold of the work with Messrs. Bishop and Co., and that ample funds have been secured to complete it as fast as possible. We hope our Milwaukee neighbors will make good their promises with all convenient dispatch.—*Chic. Press.*

NEWCASTLE AND DANVILLE RAILROAD.

We find in the Penysville (Ind.) *Register*, the following notice of a contemplated railway, which will run through the coal beds of Vermillion county, in which our friend Thos. Brown is so largely interested. The *Register* anticipates an extensive distribution of the products of the Vermillion beds, when the railway contemplaled shall have been completed. Mr. Brown has been supplying Lafayette and other towns on the Indiana Canal with large quantities of his coal, and with facilities for transportation, can greatly increase his supply for market.

We understand the Engineers engaged in running the line of this road, find the ground between the Wabash river and Coal Creek much more favorable for the construction of their road, than was anticipated. The line crosses the river at the coal depot of Thomas Brown & Co., and runs on or near their track to Coal Creek. That the road will be made, is a *fixed fact*. The Company will have a meeting so soon as the survey and estimate is made, to decide on the location and make immediate preparations to put the entire line under contract early in the spring. That portion of the road between here and Crawfordsville will be finished as speedily as possible, thereby giving us a connection with the N. A. & S. Railroad, at Crawfordsville. The superior quality of the coal beds of Coal Creek, together with the fact that the bluffs abound with beds of rich iron ore, are inducements for the Company to urge on to completion the enterprise.

Our State Geologist, Dr. Brown, visited the mines of Brown and Co., a few weeks since, and gives, as his opinion, that the coal in their mines is by far the best article he has seen in the West, and also says they have a fine quality of iron ore.

This road will pass through not only the inexhaustible beds of coal on Coal Creek, but will tap the coal field at Danville, Illinois. The Company may, therefore, safely calculate on doing a heavy freighting business, both east and west, of coal alone.

ILLINOIS CENTRAL RAILROAD.—This great work is finished, and regular daily trains commenced running between Chicago and Cairo on the 8th of January. By the 15th, the Galena Branch will be finished and opened, and a small section of the Chicago Branch is all that will then remain for completion of this gigantic undertaking.

Miscellaneous.

MANUFACTURE OF TURPENTINE.

The following report made to a convention of gentlemen interested in the manufacture and preparation of this article, assembled at Mobile on the 10th of December, may not be found uninteresting to our readers:—

The committee to whom was referred the resolutions of Col. James, upon the subject of the cultivation of Turpentime, &c., beg leave to make the following report: That the character of the soil best adapted to the production of the Turpentine Pine should be of light and porous nature, with a subsoil of clay, capable of retaining moisture. The pine should be of an extended low-growing top, with thick bark and sap-wood—the trees not to stand so thickly upon the land as to be too much shaded by the overgrowing foliage. The number of boxes to be cut in a tree should be governed by the size of the same. As a general rule for cutting boxes the committee recommend the following standard: the box to be thirteen inches in horizontal width, three and a half inches in horizontal depth, and seven inches in perpendicular depth, this will produce a box of the capacity of one and a quarter quarts, which, after a few years use, will be reduced to a box capable of containing a full quart only; which, from experience, your committee believe to be the most profitable size. Taking a tree capable of sustaining two boxes, they would recommend that the boxes be cut side by side, with a life-streak of bark of four inches, intervening between them, in preference to cutting them opposite to each other, and that one third or more of the bark should be left for the support of the tree, the boxes to be cut just at the bulge of the tree near the root of the same. The corners of the boxes should be cut out with the inclination of the face of the box, and to extend in a line perpendicular to the outer corners of the same, so as to show a line horizontal and the top of the box—the object of *chipping* being to expose a new surface of the pores for the exudation of the turpentine. The cut of the hacker should extend a half inch in depth into the tree, and one-fourth in altitude, and the chipping should be renewed once a week. The best instrument for the purpose is the hacker with a small bowl, to be kept exceedingly sharp, and the best instrument for sharpening the same is the stone known as the Siam hone or slip. Your committee have nothing new to suggest or recommend as to the best mode of dipping, or the best instrument for that purpose—but in reference to the scrape or hard turpentine, they would advise the use of cloths instead of the old fashioned box for receiving the same. The committee would recommend the light iron axle two horse wagon, as the most expeditious and economical for hauling turpentine. The frame for the barrels should be made of 4 X 6 inch. scantling, with segments of circles cut therein, one-half across the upper face of the same to receive the ends of the barrels, with two interior parallel rails, so that when either end of a barrel is removed from the concave which it occupies, it can be rolled from the wagon on a smooth surface. The committee would recommend that when the distiller can avail himself of a hill side, the simplest plan to elevate turpentine to the still, is to extend a railway from the top of the hill to the platform. If upon a level plain, the use of the machine employed by flour mills to elevate their sacks and barrels to the upper stories of the mill, the said machine being a platform, with four upright posts, with a roller in the head of each, two ropes from the roof of the still-house, passing beneath said rollers, (one on each side,) thence through sheave blocks and around a cylinder, turned by a crank from below. In regard to preparing the turpentine for distillation, we refer you to the explanation made by a member of this committee, as to the style best adapted to making the best article of rosin. The experience of your committee would lead them to decide in favor of a small size still, or with a flat and greatly extended surface. The committee would recommend that in distilling, the still should be charged to only two-thirds its capacity, to allow for the expansion of the material during ebullition. The amount of water to be supplied should be equivalent to the amount condensed in the still-worm, and kept in the same ratio so long as the spirit comes over, and should the still have a tendency to boil over, an increased amount of fuel is to be supplied until the excessive ebullition ceases; the heat is then to be diminished, and the still run regularly as before. Your committee deem it unnecessary to enlarge on this point, as they presume that in all cases of new beginners, a practical distiller will be employed. Your committee recommend that in addition to the usual mode of glueing the spirit casks, that the casks being partially drained after each glueing, be placed upon a horizontal plane, each head alternately placed upon said plane, and would further recommend the use of the Scotch glue, in all cases in which the distiller is unable to manufacture his own glue from good sound hides. The committee would recommend that in making barrels and casks, the staves and heading should be fully dressed, ready for the truss-hoop, and be permitted to remain sometime, previous to being made into barrels, for the purpose of allowing the staves, etc., to shrink. By adopting this course, the barrels are less liable to leakage. The staves for turpentine barrels should be thirty-two inches in length, the head to be worked in a twenty inch truss hoop. The spirit cask should contain forty-five gallons, and in case oak heading cannot be obtained, would recommend the substitution of poplar instead.

Monetary and Commercial.

During the past week, there has been a slight improvement in the general features of the commercial world. The opening of navigation is beginning to exert a favorable influence; but the work of building up must be gradual—it requires but a short time to destroy confidence, but years of patient toil to build it up again.

In the money market there is beginning to be felt a change for the better. The banks are cautiously extending their line of accommodations, and although there are large offerings of well secured papea at high rates, many houses are discounting for their customers at their former regular prices. We quote an increased regular business at 10 to 14 per cent.; outside rates from 1 to 2½ per cent. per month.

Exchange on New York is buying ½ per cent. and selling at 1 per cent. New Orleans exchange is ranging from ¾ to ¾ per cent. premium. Gold is selling at 1 per cent. Uncurrent funds continue as at former quotations, from 4 to 25 per cent. discount.

The stock market begins to exhibit signs of activity, and prices are, in general, well sustained.

The river continues in a fair condition, and when the Southern and Western branches shall have been fairly opened, a still further increase in business and receipts may be expected; we hear of one firm in town which has had, for some time, three locomotives ready for shipment to Nashville as soon as the navigation on the Cumberland shall be opened. We hear of some establishment here and in the country, resuming, or making active preparations to resume operations. On the whole we quote improvement as one of the general features of the week.

New York quotations are more encouraging; our advices notice money in greater supply than at previous dates, although rates of discount on business paper have not materially declined. Loans on stock securities, however, are negotiated with more ease and without paying extra rates.

The stock market shows signs of improvement, and sales are made at better rates. The redemption of U. S. Government stock is to be continued to the amount of $1,900,000.

Foreign exchange is heavy, and shipments of specie are discontinued. We quote bankers' checks at 107¾ for best names; transient bills with bank endorsements 107 to 107½, and produce bills 106 to 106½.

JAMES HARDMAN, *Auditor.*

ALABAMA AND FLORIDA RAILROAD.—We learn from the Montgomery papers that the Directors of this road have taken a step forward. They have put *fifty miles* under contract, to experienced and responsible parties. Mr. Jones, the worthy Chief Engineer, informs us, says the *Advertiser*, that the ground will be broken this week on a part of the road, and that vigorous, continued blows will be struck until the railroad connection with Pensacola is consumated.

The portion of the above road through this State, to the Alabama line, we are informed, has been put under contract, and the energetic Engineers are now on the road running the line, and surveying the most feasible route, in as direct an air line as is possible to put through.

Very fortunately there will not be any great amount of grading, of either excavating or filling in, piling or bridging anywhere along the route which we have to construct; and we have been credibly informed that the present engineering corps are decidedly of the opinion that former estimates for this road have been ranged at a much higher figure than will be called for, as the supposed cost has been over estimated very considerably, as far as they have proceeded; and they are now over the most difficult part of the road.—*Pensacola Dem., Fla.*

MAYSVILLE AND LEXINGTON R. R.

RAILROAD MATTERS.—The work of relaying the track of the Maysville and Lexington Railroad between Paris and Lexington, so as to make it correspond with the guage of the Covington road, is progressing satisfactorily, and the trains of the latter road are already running five or six miles beyond Paris. It is expected the work will be completed within two weeks.

We understand that Charles A. Withers, Esq., has been appointed superintendent of the Covington and Lexington Railroad. Mr. W. has been a zealous and efficient friend of the road from its inception to the present time, is thoroughly acquainted with its details, and is in all respects admirably adapted to the position. We agree with the Maysville *Eagle* in saying that his marked devotion to the interests of the road deserves, if possible, a greater compliment.—*Cov. Jour.*

MESSAGE OF GOV. WRIGHT, OF INDIANA.

The Message of Gov. Wright to the Legislature of Indiana was sent in on Jan. 5th, and is an able and interesting document. The Governor begins by reviewing the financial condition of the State, in which he says:

It affords me pleasure to be able to say that the fiscal affairs of the State are still improving. Economy has been observed in the public expenditures; and while the interest on the public debt has been promptly paid, the reduction of the principal has not been neglected.

The amount of the ordinary expenses of the state government, as audited and paid by the Treasurer, for the year ending October 31, 1854, is $64,261.44—which is $49,668.44 less than the amount paid for the year ending Oct. 31, 1853. This sum, as the ordinary expenses of a government composed of a million and a quarter of inhabitants, will compare very favorably with the ordinary annual expenditures of any State in the Union—it being, *per capita*, four and one-third cents for each individual.

The sum total of the ordinary expenses of the State during the past ten years, is $945,198.68, while the expenses of the past year, ending Oct. 31. 1854, are only $54,261.44.

The amount of taxable property in 1841 was	$116,237,965
In 1850	138,262,085
In 1854	290,418,148

Showing an increase during the past four years of 110 per cent.

The amount paid during the last ten years for principal and interest of Treasury scrip is	$2,274 705 90
Interest on State Debt	1,798.412 92
	$4,053.118 82

Indiana has spent for three benevolent institutions, during ten years, $693,503.31.

On the first of November, 1851, the State debt of Indiana amounted to $7,031,003.50. Of this sum the State has liquidated the amount of $227,864.50, leaving of the public debt the sum of $6,803,139, of which sum $1,763,139 is bearing two and a half per cent. interest, and the balance, to-wit. $5,040,000 is bearing five per cent. interest. The aforesaid sum of $227,864.50 having been paid by the State, under the act of the General Assembly creating the Sinking Fund, these stocks remain on the books of the Agency, the interest credited and applied annually to the reduction of the principal of the public debt. Hence, so far as the interest is concerned, the stock belonging to the State is still considered outstanding.

Satisfactory evidences of the strength of the financial resources of the State may be seen in what we have accomplished in the last ten years. During this period, without estimating what are called the ordinary expenses of the State, there have been, by taxation, levied, collected, and applied, the following sums, namely:—

For the redemption of principal and interest of scrip	$2,274,605.90
Interest on the public debt, including the payment of the interest for Jan., 1855	1,798,412.92
Payment upon the principal of the public debt	227,864.50
Payments to the three Benevolent Institutions	693,503.31
Expenditures on the State Prison, including expenses connected with the removal of prisoners	71,412.89
Making	$5,065,899.50

If to this we add the ordinary expenses of the State government for the same period, amounting to $945,198.68, we have the sum of $6,011,098.18, equal to about eight-ninths of the present State debt, raised from our people by taxation, at a rate exceeding $600,000 annually—five-sixths of which amount has been annually applied to the payment of interest and to other objects not included among the ordinary expenses of the State.

The exhibit here made of the amount already liquidated of the public debt, fully corroborates the estimates made in my annual communication of 1850, which looked to its final discharge in 1871.

No intricate machinery has been required for this purpose, but simply an application of the surplus means in the Treasury, to the purchase of the debt. And I deem it an imperative duty, while prosperity is all around us, and our other burdens are light, to urge upon you the continuance of this policy, and to make an annual levy of not less than five cents upon the hundred dollars, to be appropriated exclusively for this purpose. With the application of these means, and such others as may be at our command, the last dollar of our public debt will be discharged in 1868.

The message next notices the expiration of the charter of the State Bank, approves of the clause in the constitution which forbids the State hereafter from being a stockholder in any bank, or lending her credit to any corporation, and recommends the appointment of a Board of Commissioners with full authority to make a settlement of the affairs of the State and the Bank, on the expiration of the charter.

The Governer then condemns the general banking law in the following terms:

The law upon the subject of general banking, has failed to accomplish the purpose for which it was enacted. It has not furnished for the use of the people, a sound circulating medium. The experience of the two past years fully establishes the correctness of my remarks addressed to the last General Assembly on the subject of banking; and I may adopt, in its fullest meaning, the sentiment then expressed, "that past events have clearly shown that the restrictions provided by the law are insufficient to prevent abuses of the privileges granted."

It is a matter of regret that this subject did not engage the attention of the General Assembly at its last session. I again urge upon your consideration, the views expressed on this question at that time.

The Governor attributes the financial difficulties to over-trading, and thinks it fortunate that the demand on the banks for coin or exchange was begun early, and that this circumstance saved the people from chances of greater loss.

The great error in the law is, that the entire responsibility of the system is placed in the hands of a single individual, and he an officer of the State already charged with duties and trusts of the most important character. This single individual determines upon the validy of the organization, the character and value of the stocks, issues the circulation, holds the securities, passes upon the correctness of the reports, delivers powers of attorney for the collection of interest, and in short settles all questions connected with the Banks, according to his own unaided judgment. With a bond of only $10,000 he is the custodian of near $10,000,000 of the public securities.

If it be the design of the Legislature to continue this system, it will, in my judgment, be necessary, in order to secure the confidence of the people, and to protect their interests, to provide for the organization of a Bank Department, with a Board of Bank Commissioners, with full powers to determine upon the locality of the Bank, the necessity of its creation, the solvency of the securities offered, and who should, also, be charged with their custody.

I also recommend, that inasmuch as the term of the present incumbent is about to close, a committee of the two Houses be appointed to investigate fully the condition of all matters connected with the office of Auditor of State. A full report will doubtless do much to allay the apprehensions of the public, and establish confidence wherever merited.

The following is the statement of the circulation of the banks on Jan. 1st, 1855:

The circulation of the State Bank in Oct., 1853 was	$3,834,765 50
Circulation in October, 1854	2,803,647 50
Decrease	$1,031,117 50
The Stock Bank circulation July 1st, 1854.	8,299,575 00
Circulation January 1st, 1855	5,565,099 00
Estimated amount in hands of Bankers not in circulation	1,000,000 00
Decrease in six months	4,734.275 00
The precise amount surrendered at the Auditor's office up to 1st Jan., 1855, is	3,734,475 00

Here we have a withdrawal from circulation in twelve months, of $5,766,123 00, or more than one-half of all the circulation called money in the State.

The message then proceeds to the consideration of several interesting subjects in connection with the School Fund, the observance of the Sabbath, the sale of intoxicating liquors, the benevolent institutions, the State Board of Agriculture, African Colonization, a Geological Survey of the State, Railroads and Railroad accidents, Attorney Generalship, Lease of the State Prison, the Military of the State, the Canals, the Improvement of Swamp Lands, the number of Senators and Representatives in the Legislature, State Bonds and some of the political aspects of the times.

THE BANKERS' ALMANAC, FOR 1855,

WILL be published in a few days, containing—

I. Calendar and Chronology of Important Financial Events.

II. List of Banks in the United States, December, 1854. Capital, Name of President and Cashier of each.

III. List of Private Bankers in the prominent Cities and Towns of the United States and Canada; also in Europe, South America, &c.

IV. Usury Laws of the States, with the Laws relating to Damages on Domestic and Foreign Bills of Exchange in each State.

V. Commercial and Financial Tables of the United States and Europe.

☞ *One Volume Octavo.* No copies will be mailed without a special order. Price ONE DOLLAR, (or postage prepaid, $1 12.)

J. SMITH HOMANS,
Publisher of the Bankers' Magazine,
No. 70 WALL-STREET, N. Y.

☞ Advertisements of Banking Firms will be inserted in the *Bankers' Almanac*, for 1855, $10 each. jan11.1t

RAILROAD IRON.

I WOULD respectfully call the attention of Railroad Companies and Contractors to my facilities for

NOTCHING RAILROAD IRON

Suitable to be spiked in the Chairs. My Patent Punching Machines, for which I received Letters Patent, enable me to make contracts for punching iron at a less price than can be done with any other Punching Machine now in use.

Orders solicited, and work executed in any part of the United States. Address,

S. M'KENNA,
jan11.-tf. Box 705, Cincinnati P. O., Ohio.

FREIGT CARS FOR SALE.

15 PLATFORM AND 15 HOUSE CARS FOR SALE. Iron Trucks adapted to guage of four feet eight and a half inches.

OLMSTED, GOODMAN & CO.
jan11-tf.

TO RAILROADS AND CONTRACTORS.

HORSE POWERS.—The undersigned being agents for the sale of R. H. Pease formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

GAS.

AUDIN'S PATENT.—We are agents for this new and improved furnace, and having had one in operation at our offiee for several months past, ean confidently recommend it as being simple in its operation, oecupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to ereet these furnaces at our own risk and warraut them to produee good gas.

T. WRIGHTSON & CO.,
167 Walnut-st., Cin'ti.

DURYEE & FORSYTH'S
PATENT
PLATFORM SCALES.

WE ARE AGENTS FOR DURYEE & FORSYTHS' UNRIVALLED PLATFORM SCALES, FIRE PROOF SAFES, TRUCKS, LETTER PRESSES, AND SUGAR MILLS.

We decm it unnecessary for us to say a word in their commendation, as their reputation for accuraey, adaptation, and durability, is too well kuowu to require it. HEWSON & HOLMES,
dec27 83 and 85 Walnut-Street.

CINCINNATI STOCK SALES.
HEWSON & HOLMES,

Have constantly on hand and for sale at the Stock Board, Merchant's Exchange, and at private sale, Railroad, Bank, aod Insurance Stock, and Railroad Bonds.

Regular sales at Stock Board on Wedoesday and Saturday of each week.

FOR SALE.

Bellefontaine and Indiana Railroad Stock.
Central Ohio Railroad Stock.
Cincinnati, Hamilton and Dayton Railroad Stock.
Cincinnati and Chicago Railroad Stock.

CHARLES FRODSHAM'S
IMPROVED WATCHES!
BEGGS & SMITH,
JEWELERS,
No. 6 West Fourth St.,
Adjoining the First Presbyterian Church,
CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wiscoosio, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful aod unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemeo, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Geo. John S. Tyler	.....	Massachusetts
John E. Thayer, Esq.	.....	"
Enoch Traio	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,	.....	Sandusky.
E. F. Osborne, Esq.	.....	Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12.....	
" 14.....	$230
" 16.....	
" 18.....	250
" 20.....	275
" 22.....	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I porchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty secouds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.
Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is hut one second, ora loss of but ooe-hundredth of a secood per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully,
E. F. OSBORNE.
To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procored from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run dowu, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,
HENRY O. AMES,
Sup,t Ciu. Ham. & Dayton Railroad.
August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimbails and used with the same care, I think their performauce would equal that of Mr. Frodsham's celebrated hox chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

(On Baltimore & Ohio Railroad, midway between Baltimore and the Ohio River.)

MANUFACTURERS of *Engine Lathes, Planing Machines, Drill Presses, Hand Lathes, and other Machinists Tools.* These tools are built in a superior manner, from the very best materials, and are particularly adapted for railroad shops and all others repairing first rate machinery. Our location is very advantageous for shipping work to the West or South. Orders and communications receive prompt attention. Address

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,
Christiana, Pa.

Or, to **CHRISTIAN UMBLE,**
Gap, Pa.

30ly

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ½ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agent of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and possessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.
2d, They are a great deal cheaper.
3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of Germau Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., John ockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr3 140 and 142 Main street

RAILROAD MAP.

WE have now ready A RAILROAD MAP OF THE WEST, containing ALL THE RAILROADS constructing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a competent hand.

The size of the sheet is 24 by 38 inches, and can be sent by mail.

Price—plain..... 40 cents.
Colored in outlines..... 50 cents.
Full colored ..... 75 cents.

Liberal discounts will be paid to those wishing them in quantities.

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to U. P. JAMES will secure prompt attention

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,
Through Tickets from all Parts of the West,
ARE NOW SOLD IN
Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED
For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION
The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,
The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York.
And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.
WM. G. HARRISON, President. *JOHN H. DONE*, Mast. of Transportation, Baltimore.

CLAYTON & GRANT.
oct. 17.

Cincinnati to Indianapolis.

TO CHICAGO IN 15 HOURS.
TO ROCK ISLAND IN 25 HOURS.
TO ST. LOUIS IN 31 HOURS.

ALL THE WAY BY RAILROAD.

FOR Terre Haute, La Fayetto, Michigan City, Chicago, Peru, Galena, Rock Island, and St. Louis.

Passengers will find this the most pleasant route of any to the West, as it passes through the richest and most thickly settled portion of the State of Indiana. In taking this route, passengers will reach Terre Haute, Lafayette, Peru, Michigan City, Chicago, Rock Island, Galena and St. Louis, as soon as by any other leaving Cincinnati, and with less fatigue, in consequence of several of the other roads not being fully ballasted.

TO TERRE HAUTE AND LAFAYETTE BY DAYLIGHT, by way of Hamilton, Eaton and Richmond.

CINCINNATI, LOGANSPORT AND CHICAGO RAILROAD.—Three daily trains, at 6.30 A. M., 8 A. M., and 4 P. M., from Cincinnati, Hamilton and Dayton Railroad Depot.

Passengers leaving Cincinnati on the 6.30 A. M. Lightning Express, reach Indianapolis at 11 A. M., resume at 1.15 P. M. for Terre Haute, and 12 M. for Lafayette, Michigan City, Chicago, Galena, Rock Island and St. Louis, reaching Chicago at 8.30 P. M., in time to connect with night trains for Galena, Rock Island and St. Louis.

Baggage checked to Indianapolis.

Passengers leaving Cincinnati at 8 A. M., Richmond Mail Passenger Train reach Richmond at 11.05 A. M., connecting with trains for Hagerstown and New Castle. Returning leave Richmond at 3.10 P. M., arriving in Cinninnati at 6 P. M. This train stops at all way and flag stations.

FARE:

Jo.8-tf. Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to.this valuable improvemcnt in

AXLE BOXES.

The first eost and "fitting up" of these hoxes is 20 to 25 per cent helow that of most hoxes in use. They will savo about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heatod" by severe service. The Resevoir is held closo to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from tho journals, while under the car, in a few minutes. Cars furnished with these boxos run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with theso boxes than if any other kind aro used.

Tho first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the samo, with the subscriher.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

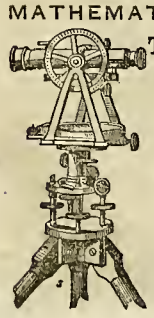

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

GUM MEZQUITE.

The discovery of Dr. Shumard, in the Gum Mezquite of New Mexico, is likely to prove valuable. This gum exudes from a tree of the Acacia family, and although not precisely the same with Gum Arabic, it will prove of equal utility and value. It is easily soluble, and in some particulars is better than the Arabic. We have seen and tried it, and know its properties. The War Department has directed Dr. Shumard to procure all he can.

The tree is found in New Mexico, about three hundred miles south-west of Fort Smith, and is found covering the country for hundreds of miles. The gum exudes in limpid sap, when the bark of the tree is injured or broken.

Dr. Shumard states that it may be found in any quantity. We have, no doubt, it will soon become an article of commerce, and will doubtless reward commercial enterprise.

BANKING — THE TEXT OF THE TIMES — ERRONEOUS POPULAR IDEAS.

When a man is in trouble, he instantly looks round to find some other mortal upon whom to lay the blame! It seldom occurs to him (or if it does, he keeps very dark on that point), that *he* is the mortal, upon whom the blame really rests. For example, when he is in debt to others, and cannot collect the debts due him, he seldom remembers the great fact, that he was, in all this, the *maker of his own condition*. It is as clear as the sun at noon, that if he had not *taken credit*, he could not owe others, and that if he had not *given credit*, they could not owe him. It is perfectly clear, that if there be any blame in the case, *he and those whom he dealt with*, are the only persons to blame, and there is no other being, whether an individual, a bank, or a government, can be justly complained of.

But, the man in trouble, acts on the human impulse of blaming somebody. Now, it is a lucky thing, when he can find this somebody, in the shape of a bank, a state, a war, or some other distant personage; for, the farther off the object of blame is, the better! The farther off it is, the less easy it will be for others to detect the fallacy of the complaint.

The illustration of this principle may be found in almost any period of American history, and, especially, in its period of commercial revulsions. For a large part of our history, we had a National Bank, and while that lasted, it was an all sufficient *butt* for the complaints, assaults, and jeers of suffering debtors. The bank expanded on purpose to entice the people, and then remorselessly contracted to destroy them! The monster! It had no heart, no feeling, and only opened its jaws to devour!

At length the great monster fell, under a thousand blows. But, trouble did not cease. There came another great revulsion; an awful tumbling down of airy castles, and cloud-built palaces. Who now is to be blamed! Why, of course, the corporate banks. Who else could do such a prodigious wrong! The great monster is dead, to be sure; but here are a thousand little monsters! Corporations have no soul! Banks are frauds, cashiers knaves, and directors no better than they should be. Down with the banks! Well, the banks suspended payments, and they were denounced as dishonest creatures, unwilling to pay their debts; although the act of suspension was a positive relief to the community. The assault upon them continued, and half the number of banks ceased to exist, either by bankruptcy or voluntary withdrawal. There was still a number in existence; but, they were utterly insufficient for commercial purposes.

Then came, in this country, a new class of men, under the name of *Private Bankers*; some of them were men of real capital, lending their own means; a larger number were mere brokers, or exchangers, dealing almost exclusively on borrowed capital. As credit extended, and the country really became richer, and money was abundant, large amounts of capital were deposited, (individually in small sums), with these bankers under the temptation of *interest paid on deposits*. The corporate banks could not do this, because they could charge only six or seven per cent. on their discounts. The paying this interest necessarily led to *Usurious Interest;* and this forced the entire community into paying a higher rate of interest, than *either business could afford*, or *morals defend*. But, even this accumulation of banks of deposits, leaning on the individual means of society, was not enough to satisfy the rapacity of speculation. A new invention was made by the new race of bankers, for the benefit of society, and to prolong, if possible, the day of inevitable reckoning. This was the invention of the Stock Banks, by which a State Bond, payable in twenty years, was to be convertible, at once, into gold! In other words, into bank notes, redeemable in gold. This experiment lasted about a year, when a large part of the Stock Banks failed, and the public lost confidence, in that mode of banking.

In the meanwhile, the mines of California have supplied the country with an enormous amount of gold, the largest part of which has been exported to pay for the home extravagance of the people. Still there remains a great quantity of gold in the country. The government is financially prosperous, beyond all example. The banks have *not* suspended. Who is there to be blamed? An attempt was made to put the blame on railroads; but even *that* has to be given up; for, it is proved, beyond cavil, that the railways *in actual operation* have paid more on their cost, than is paid on any other investment of capital. Who then, is left to complain of! Absolutely nobody, and no system. We have, at last, after half a century's experience come down to the real and ultimate truth, that it is the *general indebtedness of the people themselves*, which produces a financial revolution. It is not banks, especially, Corporate, State, or National Banks, which brings on financial troubles. They share in a general calamity, and being larger dealers, are more conspicuous.

The present crisis is not without its moral, and its value. The country has learned some great truths, and especially, in regard to the different modes of banking. For fifteen years National and Corporate Banks have been assailed, as the great sources of commercial evils, with all the malignity of personal hostility, and political malice. The people have been educated into the belief, that State and Corporate Banks were great criminals, only reprieved from public justice, by the mercy of the people. The whole of this theory is

swept away, in a day. There is not a fact left on which to base it. It is pinioned, as a libel, to the history of the times; and, appears, as a mere figment of the brain. While the real banks of the country have not suspended, and their notes are looked upon as gold, the storm has swept down the private banks in columns, and proved, what sensible men knew before, that debts for *deposits* were just as much debts, and as dangerous to the people, as debts for *circulation*. A bank note is a *debt* due the holder. A deposit, a *debt* due the holder; and if these deposits are in small sums, payable on demand, the banker is just as likely to fail for one as the other. In other words, it is the *debt*, and not the fact that that debt is made by a Corporate Bank, which is the danger or the difficulty.

BANKS and BANK NOTES are a great commercial invention; an evidence of improved civilization, and necessary to the convenience and facilities of business. That they are any more an evil than steam, or types, or cotton machinery, is an idea, generated only by stupidity or ignorance; and that the world will not do without them, is as clear, as that it will not do without railways, however assailed. What, then, is to be done? Clearly to make them as safe and convenient as possible. And how can that be done? Simply by taking counsel of experience. Thousands of banks have proved safe to the public, and profitable to their owners; but, not one ever proved safe or profitable, which was not based on two principles; *first*, that it had a real, and solid capital; and *secondly*, that its discounts were based on commercial business—actual transactions. With these principles, any bank is safe, and without them, none can be.

WHAT SHOULD THE FARMER DO WITH HIS SURPLUS FUNDS?

The idea has prevailed, to a great extent, that the farmer has but little interest in the internal improvement of the country where his land is situated. That it is enough for him to cultivate his fields, to keep in repair his fences, and to spend a day or two a year in working the country roads, without which he would be enclosed with an ocean of mud during a great portion of the year, and shut out even from the sight of his nearest neighbor; and that if he do these things well, he is absolved from every duty he owes to himself or the neighborhood in which he resides. He believes that his surplus earnings are only safe when invested in land *somewhere*, and imagines that when he has *land*, he has something which can never depreciate in value. That it is the business of wealthy capitalists to build railroads to improve his farm, and that when they locate the road, it is a good chance for him to get heavy damages from a company that will benefit his property far more than the cost of the pittance which they take. That these have been the ruling thoughts of far too many who should have known better, has been proved by the history of almost every railroad in the country.

Now we beg leave most respectfully to differ in opinion. We believe that every consideration of public spirit and enterprise, and even a due sense of the honesty of the transaction, should lead the farmer to cheerfully lend his aid and countenance to the furtherance of an undertaking which, from its very nature, must chiefly benefit him. But apart from considerations of patriotism, we imagine that it is no difficult thing to prove that the farmer who invests his money in wild lands, and allows a railroad which should pass his door to suffer for want of the aid in his power to give, is exceedingly unwise. Suppose that in the course of the year, by toil and industry, he has gathered together out of the products of a farm of 100 acres, from $200 to $300, and this he invests in wild lands at the average price of $1,25 per acre, giving him 200 acres of land located somewhere in the unsettled portion of the country. Now he cannot safely expect to realize anything from this land, unless improved by settlement and railroad enterprise in less than 10 years. Two hundred acres of land then at the expiration of ten years will have cost:—

200 acres at $1,25	$250
Interest 10 years at 6 per cent	150
Cost at the expiration of 10 years	$400
Estimated value at $10 per acre	$2,000
Increase in 10 years	$1,600

Now were this same money invested in the stock of a railroad judiciously located and managed, the following might be reasonably estimated as the result to be attained:—

$250 railroad stock	$250
Interest three years at 6 per cent	45
Total	$295
Increase of value of farm of 100 acres, $15 per acre	$1,500
Increase in saleable value in 3 years	1,205

Here, then, we have a certainty of an increase in 3 years in the value of the original farm nearly equal to the highest rate of increase that could possibly be attained under the most favorable circumstances in land speculation in ten years. And if the interest of the increase were added to itself for the remaining 7 years, there would result:—

Increase in three years	$1,205
Interest on same for 7 years at 6 per cent.	506
Total	$1,711

A sum greater than the greatest possible advantage to be gained from speculation. Now add to this the annual increase in the value of crops and market facilities, and the balance will be found greatly in favor of the home enterprise.

But the question will arise, would the aid proposed insure the building of a railroad in the time specified, we answer, most assuredly it would, and to prove our position, examine carefully the following figures. According to the "Exhibit of the Pittsburg, Maysville, and Cincinnati Railroad," the average density of population in the counties of Harrison, Guernsey, Muskingum, Noble, Morgan, Athens, Perry, Hocking and Vinton, is 46,7 per mile. Now assume that one in five is a householder, and we have an average of 9,4 householders per mile of railroad through these counties; now we have shown that the influence of a railroad extends to 10 miles on each side of the line, or a belt 20 miles wide; we have then for one mile of a railway 188 families, whose property will be materially increased by the road:

188 families each investing $250, is for one mile of road	$45,000
Cost of road per mile	30,000
Surplus	$15,000

or one-half more than is sufficient to build the road, and equip it with all its working apparatus and rolling stock, and that too out of the surplus earnings of a single year of ordinary prosperity.

Railroads.

OHIO RAILROADS—RAILWAY TIMES AND JOURNAL.

The *Railway Times*, the *Journal* and *Hunts' Merchants Magazine* have all of them made statements of the amount of Railways in the U. States, in each of which are great errors, and which ought to be corrected, that we may start fair for next year. The statements for the *Railway Times* and the *Merchants Magazine* are, we believe the same, and contain the following errors for the roads in Ohio.

The *Central Railroad* which is 141 miles complete, is first put down as 59 miles only complete, and 82 incomplete; then, as Columbus and Newark 36 miles; then as Newark and Zanesville 30. These parts are all parts of the same road, and make 141 miles complete. Then we have the "Columbus and Springfield" 65 miles, when it is but 19.

Then we have the "Dayton and Springfield" 24 miles, when it is a part of the "Mad river and Lake Erie" also given.

Then we have the "Hamilton, Eaton and Richmond" put down 115, when it is only 45 miles.

Then we have the "Dayton and Richmond" put down at 52 miles, which does not exist, and the Dayton and Western (which is meant) put down at 20 miles, and it is 34.

The "Dayton and Michigan" is put down at "5," which is 28.

The "Greenville and Miami" is put down at 37, and the "Dayton and Miami" at 46, are the same road, and 46 miles in length.

The "Ohio and Pennsylvania," is 147 miles only in Ohio, the other 40 being in Pennsylvania.

The "Scioto and Hocking Valley" is 45, instead of 20.

The "Springfield and Xenia" 20 miles, is part of the Little Miami. The Mansfield and Newark is the *same*, with the "Columbus and Lake Erie."

There are other errors, which in the aggregate, represent about 300 miles of railway in Ohio to have been completed, more than there really have been.

The errors in Indiana Railways are equally great; but, we shall not notice them here.

The *Railroad Journal* has also made some errors. It sets down the "Ohio and Pennsylvania" (in Ohio), as 187, which is but 147, the residue being in Pennsylvania.

The "Mad River and Lake Erie" is set down at 193 miles, which is but 156. The "Carrollton Branch" 20, does not exist.

The "Cincinnati and Marietta" is put down finished 94 miles, which is but 54.

We are aware that it is extremely difficult to get these distances all correct, and equally difficult not to confound names, when there are such a multiplicity of them. Still, a reference to some of the common guide books, would have corrected some of these mistakes.

We expect, in a short time, to finish our review, and make it as complete as possible.

CINCINNATI, UNION AND FORT WAYNE RAILROAD.

At the Annual Meeting of the stockholders, on the 3rd of January, 1855, George Carlisle, Jer. Smith, B. W. Hawkins, Jacob M. Haynes, Robert Huey, Theophilus Wilson, Samuel L. Rugg, Samuel S. Mickle, and John Hough, jr., were elected Directors for the ensuing year.

The old officers were re-elected as follows: Jer. Smith, President, Wm. P. Debolt, Secretary, Jonas Votaw, Treasurer, and R. M. Patterson, Engineer.

We make the following extracts from the Annual Report of the Directors to the stockholders:—

GENTLEMEN:—We have the pleasure of announcing to you that, nothwithstanding the extraordinary depression in the monetary affairs of the country generally, your work has moved forward steadily during the past year, without any cessation or retrograde movement. And though we have not got all done that we could have desired, yet, as many railroads, banks, bankers, and monied men have had to yield to the pressure of the times during the past year and suspend operations, or entirely fail, it is matter of congratulation that our Company has not been compelled to do either.

The first section of the road, from Union to Portland, nineteen miles in length, has been graded during the past year. There is some light work and trimming up yet to do, but the grade on that section is in such a forward state, that it can easily be finished in time for the tracklaying during the present year. The amount of grading done up to the time of the estimate made on the first of November last, was $24,047; and the estimates were all promptly paid as made during the year, the Company never having failed to meet their engagements. There has been about $6,000 worth of work done on the grading since the first of November, making in all about $30,000 worth of grading done during the past year.

The estimated cost of bridging the first section is $10,423, and of the ties and tracklaying is $20,870. These sums will have to be raised along the line to secure the putting down of the iron on the first section during the present season; and it is to be hoped that the friends of the enterprize will, by a united effort, secure the means and put it in the power of the Directory to lay the iron upon that section, and put it to use.

The stringency in the money market has prevented us from negotiating our real estate lands. We have, however, sold $16,000 of them in small amounts, through the country. Of those sold, $9,000 have been redeemed, or taken in payment for lands sold, leaving $7,000 outstanding.

It has been and will continue to be the policy of the Company to push the work as fast as the means of the Company will justify without involving it, and to finish and put to use the sections consecutively. This policy steadily adhered to, will eventually make the road. The times may retard or accelerate its completion, but with such a policy they cannot prevent it. Every friend of the work, however, must do his duty, or by his remissness he will so far retard it. Its ultimate completion, however, is "a fixed fact."

Respectfully submitted, by order of the Board, JER. SMITH, Pres.

January 3d, 1855.

THE OHIO AND MISSISSIPPI R. R.

We understand this Company will lose nothing by the failure of Page, Bacon & Co., of St. Louis, whose failure had caused reports unfavorable to them. On the contrary arrangements are making to carry on the work, with energy, and in expectation of a speedy completion.

It is supposed that a very small sum will finish the road between St. Louis and Vincennes. On the division between Vincennes and the Jeffersonville Road, it is said that *eighty per cent.* of the work is complete, and, therefore, but a comparatively small sum will finish the work.

It is greatly to be desired, that this great and magnificent enterprise should be completed, and thus the public and the stockholders begin to realize its beneficial effects. When completed, the work will, beyond question, do all, as to business or profits, which has ever been expected from it.

ANNUAL REPORT, AND CONDITION OF THE LITTLE MIAMI RAILROAD.

We have before us the Twelfth Annual Report of the Directors of the L. M. Railroad Company, for the year 1854. No company can better afford to make a full return of its affairs, than this; for certainly none can make a better showing. We shall extract a few facts from this Report, by way of illustrating the progress of a *good* Railway on the one hand, and on the other, some of the changes which are continually going on in commerce.

1. INCREASE OF BUSINESS.—Mr. Clement, the Superintendent, gives the following increase for the past year:—

Passengers	31,047
Freight, tons	21,115

The entire increase of passengers, is in the *local movement*, which indicates what is now pretty well understood, that the prosperity of a railway really depends on its *local traffic*. The exceptions to this rule are very few. In the whole business of this road, the increase in passengers is probably greater than that in freight. But, in the last year or two, the increase in freight is very rapid, proving the extension of Cincinnati Commerce. That we may see clearly the rapid increase of passengers on Western Railways, we give the following table of passengers carried on tho L. M. Railway, In the last ten yesrs:—

In 1845	44,760
" 1846	54,265
" 1847	78,342
" 1848	87,555
" 1849	100,970
" 1850	144,439
" 1851	174,089
" 1852	212,687
" 1853	291,375
" 1854	322,422

Leaving out fractions, the number has been *actually doubled in each three years!* And in the last three years passengers have increased as rapidly as ever. In looking into the tabular details, we find the following number to have arrived or departed at the following stations:

Xenia	23,235
Morrow	20,390
Loveland	19,251
Springfield	12,919
Milford	12,449
Yellow Springs	8,834
Deerfield (Lebanon)	9,250
Corwin (Waynesville)	5,322
Plainville	4,063

The above shows how large a number of way passengers are gathered in from the surrounding country.

2. INCREASE AND CHANGE OF COMMERCE.—The increase of certain articles carried on the Little Miami Railway, shows a great extension of Cincinnati commerce, and likewise a change in some important particulars. The following table will show this:—

	Cattle.	Merchandize.	Lumber.
In 1851	431	25,836 Tons	540.000 Feet.
In 1852	2,738	35,137 "	1,096,000 "
In 1853	4,755	51,000 "	1,600,000 "
In 1854	17,139	54,855 "	2,448,500 "

It will be seen that the cattle trade (by railway), has sprung up recently, and has become a great business. In addition to this, we may add that 127,000 live hogs were carried on the railroad. The merchandize, iron, lumber, and groceries transported, have also immensely increased. This is the extension of Cincinnati commerce.

3. Accidents.—The Report says *no accident or injury* has occurred on the road to any one, by act of the railway managers, or employees. In fact, there has scarcely been an accident (of that kind) in ten years.

4. Profits.—The Company has made in the past year, rather more than *ten per cent. nett profits*; but the last semi-annual dividend was passed, in order to pay (without borrowing), for the *second track*, which is now complete to Milford, and in a few days will be complete to Loveland.

This Company have good reason to congratulate themselves on a complete success, and ample profits, in their business.

WATAUGA RAILROAD IN TENNESSEE AND NORTH CAROLINA.

This is designed to be a short tributary to the East Tennessee and Virginia Railroad, and takes its name from the Watauga river, a small stream rising at the foot of the Blue Ridge, in the north-western part of North Carolina, and flowing in a north-west direction into the Holston river in Tennessee. This river is of importance as affording water power for iron manufacture, there being an abundance of iron ore in the range of mountains through which it flows. The soil is fertile, and the staple product is Indian corn.

We learn from the Jonesboro *Journal* that "the stockholders in this road held a meeting at that place on Monday, the 1st inst., at which they elected fifteen directors for the present year. This is their first election. Jas. W. Deaderick, Esq., of Jonesboro presided. The following is a list of the directors: S. W. Williams, Jas. T. Carter, Wm. W. Rockhold, Green P. Magee, Jacob Cameron, Jas. Carriger, and A. M. C. Taylor, of Carter County; John S. Gaines, and Jas. D. Rhea, of Sullivan County, and A. E. Jackson, Lawson Gifford, Thos. T. Young, John Lyle, Jos. S. Rhea, and Geo. W. Telford, of Washington. This, as will be seen at a glance, is a very good board of directors. At a subsequent meeting of the board, they elected A. E. Jackson President, and A. Jobe, of Elizabethton, Secretary and Treasurer. The office of the Company will, therefore, be located at Elizabethton.

"We trust that this beginning of the company will presage a happy termination. The success of the enterprize now depends on a co-operation by the State of North Carolina. Tennessee, so far, has done what she could for the enterprize. She has granted a charter; made an appropriation; surveyed a route; taken stock; formed a company, and organized with a complete board of directors, a President, and Secretary and Treasurer. We confidently look now for North Carolina to make a movement."

EAST TENNESSEE AND GEORGIA R. R.---REPORT OF THE PRESIDENT.

The annual meeting of the stockholders of this road was held at Athens, Tenn., on Monday January 1. The reports of the president Maj. Wallace, of the superintendent Maj. Jackson, and of the chief engineer Col. Prichard, were received and accepted. From the report of the president we learn that 82 miles are now in operation from Dalton in Ga., to Loudon Tenn., and the grading and masonry on the work North of the Tennessee is nearly all finished—the track laying has commenced; that the masonry of the bridge is completed, and all but one span of the wood work is up, and that will be put on in a short time; that the structure will be ready for the passage of trains by the first of February, and that in a few months—say by the first of June—the road will be finished and working to Knoxville.

The earnings of the road for the last three years have been as follows to

November 30, 1852	$22,004 72
November 30, 1853	52,613 22
November 30, 1854	79,301 74

The president strongly recommends the appropriation of a portion of the earnings to the purpose of a sinking fund for the payment of the state loan and the redemption of the company's bonds.

The whole amount of bonds sold is 294, of one thousand dollars each. Fifteen others have been hypothecated. The state loan amounts to $870,000 including $40,000 *to be* received soon on bridge account.

During the past year the treasurer has paid out in cash the sum of $601,050 67.

The sources from which this money has been obtained, are the following:

Bonds of the State,	$210.000 00
Bonds of the Company,	18,400 00
Rec'd for freight, passenger and mail pay,	125,028 37
Rec'd for freights on account other roads,	119,641 80
Rec'd from Stockholders	28,026 00
Making,	$501,095,17

The residue, say one hundred thousand dollars, and which has been expended North of the Tennessee, has been financiered for to the best advantage, and at a cost not exceeding, in the aggregate, 7 1-8 per cent. interest per annum, and it is believed that with judicious management, the officers for the coming year may, with the income of the Road—the $40,000 back money on bridge account—collections from stockholders and the sale of no very large amount of Company bonds, not only finish the Road to Knoxville, but wipe out its present floating debt.

The company have purchased during the year rolling stock to the amount of $42,000 besides tools and machinery necessary to do the work of repairs.

The company have also secured a charter for a short and important branch from Cleveland to Chattanooga and expect soon to put this part under contract.

NORTHERN PACIFIC RAILROAD.

An application has been recently made to the Parliament of Canada for a charter for a Company bearing the above title. The petition is signed by some of the most prominent and influential citizens of Canada and Maine, and goes before the Legislative Assembly, under the auspices of Hon. John Young, M. P. P. The name of Mr. Young will be remembered in connection with the Montreal and Portland Railroad. The petitioners ask for a "Charter under the name of the *Northern Pacific Railway Company*, with authority to consolidate under one charter and into a single Company, all charters previously granted over or along any portion of the route hereinafter described, with full authority to construct and maintain a continuous line of railway from the city of Montreal, by the way of Bytown and the Valley of the Ottawa, to the western boundary of Canada, with the further right to construct and maintain for the use of such railway, a bridge across the St. Mary's River at some practicable and convenient point, between the outlet of Lake Superior and Lake Huron, with the further right to enter into engagements with any other railway company or companies in Canada or the United States, for connecting their respective lines, in such manner, and on such terms, as may be found most advantageous, and best calculated to accomodate the business of such railway and the public travel."

They then proceeded to state that the subject of a communication between the Atlantic and Pacific, has already engaged the attention of the people of the United States, and that according to the report of Gov. Stevens, a route for a railway may here be obtained, extending from the waters of the Missouri to those of the Columbia river, whose gradients shall not exceed sixty feet per mile, from the head of Lake Superior to Puget's Sound. The petitioners moreover express their belief "that this is by far the best, if not the only possible route for a railway to the Pacific, north of El Paso, near the 32d parallel of north latitude. It is also believed that, after crossing the Rocky Mountain summit, a favorable and direct route may be found to San Francisco. Assuming the correctness of the foregoing propositions, it will be perceived, at a glance, that at some point or place in the valley of the Missouri River, not far from the great bend of that river, there will be

found a focal point to which all the railways of the continent, east of the Rocky Mountains, reaching westward tuward the Pacific will naturally converge, as to a common point of junction and intersection.

"Regarding this point as a leading or governing one, in all plans for a Northern Railway to the Pacific, the purpose of the undersigned will at once become obvious.

"We desire to secure a line of railway in the shortest possible distance, between the great bend of the Missouri and the Atlantic Ocean.

"From this point eastward, along the south shore of Lake Snperior, to the Sault St. Mary, crossing the river at that point, and continuing along the northern shore of Lake Huron, till the valley of the Ottawa is reached, it is believed that an uninterrupted, practicable and favorable route for a railway may be found, from the bend of the Missouri to Montreal, which is already connected by railway with the Atlantic Ocean at Portland."

From these extracts our readers will perceive the hopes and designs of the projectors of this Pacific railway scheme. We have already expressed our opinion in regard to the probable completion of the other enterprises.

Texas and Arkansas, with their munificent liberality in land, are already inviting the capital of their sister states to undertake the completion of their great schemes; and Missouri is lending her aid and credit to give vitality to her enterprise. While this Canadian project will undoubtedly recommend itself to a favorable hearing among the capitalists of Europe, who entertain, perhaps, a sympathy of feeling for our provincial neighbors, which they do not toward us.

A railroad to the Pacific then, may be regarded as a fixed fact, as one which must and will happen soon, and we imagine that it rests with the home euterprise of the people at the beginning of the various routes to say how soon.

BALTIMORE AND OHIO RAILROAD.

The regular monthly meeting of the Board of Directors of this road took place in Baltimore on the 10th. The official report of the business of the road for December, shows the following aggregate :—

	Main stem.	Wash. Br.	Totals.
For Passengers ...	$ 42,635 33	$22,124 37	$ 64,759 70
For Freight.....	221,871 14	7,792 24	229,663 38
	$264,506 47	$29,916 61	$294,423 08

As compared with the corresponding month of 1853, we have the following result:

Passengers.	Main stem.	Wash. branch.
December, 1854.....	$42,635 33	$22,124 37
December, 1853.....	38,531 31	20,140 35
Increase.....	$4,104 02	$1,984 02
Freight.		
December, 1853.....	$255,535 45	$7,957 26
December, 1854.....	221,871 14	7,792 24
Decrease.....	$33,664 31	$165 02

It will be observed by comparing this statement of the business for December, with that of the preceding month, that there has been a decrease in the receipts for freight.

	Main stem.	Wash branch.
November, 1854.....	$316,770.86	$31,101.41
December, 1854.....	264,506.47	29,916.61
Decrease.....	$52,164.39	$ 1,184.80

The principal falling off in freight was on coal, the amount transported being 22,475 tons less than in November. There was also a pretty heavy falling off in flour, the decrease being 13,838 bbls.

This is owing in a great measure to the strike among the operatives of the road on the second division, which almost stopped the freighting for two weeks. The matter has been arranged, however, and the business of the road is proceeding.

We cannot too severely condemn the practice of strikes, not only for the injury they inflict on innocent parties, but also for the loss and suffering which they cause to the families of those engaged in them. We have never known one which did not result prejudicially to the interests of the working class.

Some apprehension had been expressed that the company would not be able to meet its obligations, which matured on the 4th inst. It is stated, however, that they not only meet promptly their engagements, but had $100,000 surplus.

HAS A STATE THE RIGHT TO BUILD A BRIDGE ACROSS A NAVIGABLE STREAM?

The right to obstruct the navigation of a river by huilding a bridge over it, has been denied, and, in the Wheeling bridge case, the Supreme Court of tha United States cstablished the law on this subject. The right of navigation is decided to be the prior vested right, but as we understand that case the *right* to erect the bridge is conceded, provided it is so built as not to impede navigation.

It is not our purpose to enter into an argument in reference to the rights of bridge companies, bnt simply to draw attention to a proceeding that has recently been instituted in the Circuit Court of the United States for the Eastern District of Pennsylvania, that is of much importance, as in this case, the right of States to authorize bridges to be built across navigable rivers is directly denied. The Constitutional question involved in this case will find an application in every State in the Union and more especially in the West, where projects for building bridges over the navigable rivers are frequently started.

Through the machinery of this case, certain theories with regard to the general government, which have acquired of late years conspicuous prominence and development, are at last concentrated and brought to a focus. They are now set face to face in what is perhaps a final struggle with the sovereignty of the States in their internal affairs.

The case is this: A citizen of New Hampshire, alleging that he is engaged in a trade with the city of Philadelphia, carried on in vessels which receive their cargoes in the Schuykill river at some distance from its mouth, has brought a bill in equity against the Penrose Ferry Bridge Co., a corporation chartered hy the State of Pennsylvania for the purpose of building a bridge over that river, which bill asks for the removal of the bridge, now nearly completed, on the ground that it is an obstruction to navigation; and in the meantime prays an injunction to restrain its further progress. The Schuylkill is a stream of considerable size flowing entirely within the State of Pennsylvania. For its last ten miles it passes through the corporate limits of the city of Philadelphia, which it then leaves to empty itself into the Delaware, upon which the city is built. It separates the most important portion of the town from the western and southern parts of the State, and the internal trade from those quarters, and much from the north, passes over it; while on the other hand the main roads of Pennsylvania concentrate upon its western banks. To accommodate this traffic there are now in use five bridges, four of which are railroad bridges, and are also below the point to which the river is navigable.

Such, however, is the increase of trade and the growth of the city that this number has become quite insufficient, and to remedy the evil the Legislature has been obliged to provide for the erection of several new bridges, one of which is that now sought to be restrained.

The principle and almost the sole commerce of the river itself is in the coal trade. The coal is brought down from the interior in the barges of the Schuylkill Navigation Company, is unloaded below the permanent bridge, and then reshipped into coasting vessels. The Penrose bridge is ahout two miles below this point. It is provided with a draw, and is some eight feet above high-water mark. It would furnish no obstruction to the passage of boats or barges, but would delay or prevent the passage of coasting vessels with masts. On account of the alleged injury to him in this respect, the complainant, who is affected in the last category, has asked the interference of the court. It seems to be understood that the Schuylkill Navigation Co. is the real complainant.

The complainant applied to the court for a preliminary injunction upon affidavits, while an answer was put in denying the equities of the bill. No direct legislation on the part of Congress over the Schuylkill was shown, but it was insisted that Philadelphia, lying on the Schuylkill, had always been a port of entry, and that the revenue officers exercised their duties on that river, which, it was argued, was equivalent to a direct regulation. But the main stress of the argument turned upon a general denial of the right of the State to authorize, in any manner, the obstruction of a navigable stream. And this was the view of the circuit judge, under authority of the Wheeling Bridge case (13th Howd,) recently decided in the Supreme Court; and he accordingly expressed his opinion at once in favor of granting the injunction. The district judge, however, reserving his opinion as to the main question, dissented on the ground that the point was too important a one, and that too many valuable improvements by the State depended for their validity upon its determination to justify the court in settling the question upon preliminary injunction. The court being thus divided, the matter rests for the present an open one.

In a case decided at the November term, 1853, by the Circuit Court of the United States for the District of Indiana, *Jolly et al vs. the Terre Haute Draw-bridge Company*, it was decided that —

1. In relation to the States carved out of the N. W. Territory, the guaranty in the ordinance of '87, as to navigable streams, is still in force.

2. The Courts of the Union, having jurisdiction of the parties in a civil suit, are competent to administer the common law remedy for an injury sustained by reason of an unlawful obstruction in a navigable stream, without any express legislation by Congress, giving the remedy, and prescribing the mode of its enforcement

3. The national jurisdiction over navigable streams does not deprive the States of the exercise of such rights over them, as they may deem expedient, subordinate to the power granted by the Constitution of the United States.

4. A bridge of sufficient elevation, or with a proper draw, is not necessarily an impediment to navigation; neither is any structure or fixture such impediment, which facilitates commerce instead of being a hindrance.

5. The inquiry in this case is, whether the bridge with the draw erected by the defendant at Terre Haute is a material obstruction to the navigation of the Wabash river.

6. If it occasions merely slight stoppages and loss of time, unattended with danger of accident to life or property, it is not such obstruction.

7. The Terre Haute bridge was built under a charter from the State of Indiana, which required a "convenient draw" in the bridge. This imports a draw which can be passed without vexatious delay, or risk; and, if not such a one, the charter is violated; but if it meets the requirement of the act of incorporation, and is yet a material obstruction, it is a nullity for the want of power in the Legislature to pass such an act.

We apprehend that these points settle the law in reference to navigable streams of the West. In a more recent case of the railroad company, who are building a bridge across the Mississippi river at Rock Island, a motion to enjoin the company from proceeding with its construction was denied, as it was to be provided with a draw, which the court regarded as sufficient to rebut the allegation that it would, when built, be an obstruction to navigation.—*Louisville Journal.*

Miscellaneous.

ON SCIENCE IN THE MINES.

BY HERBERT MACKWORTH, M. INST. C. E., INSPECTOR OF COAL MINES.

Within the province of mechanics, numberless instances will occur to every experienced miner of the errors which sacrifice power, or its equivalent, money: and of the fallacy of entrusting any contrivance to an ill-informed man, who must necessarily, make a number of costly experiments, and if he should stumble in the dark over a solution to the difficulty, ends at last with a patchwork, defective alike in convenience and economy. The commonest defects are, employing manual labor instead of horses, or horses in lieu of engine-power, expending labor and work, and turning over the minerals several times during their transit, thereby injuring their value, especially in the case of coal. Although all seams of coal, up to 3 feet in thickness, are worked by longwork, in which the pressure of the roof aids in detaching the coal, and the whole of the coal is brought out of the mine, yet, singular to say, seams which exceed this in thickness are generally worked on a different system, by which these advantages are lost. The systems of working coal are numerous, and every seam differs from the rest, either in inclination, thickness, quality, fracture, or the natures of the roof and floor, requiring in each instance some modification in the working; yet the same systems of work have become established for all seams, of every kind, over certain acres of country. This shows that they are determined much more by accident, and geographical position, than by experience of the different systems in use elsewhere, and skill in selecting the most suitable. The consequences of such deficiencies are serious—not only is much more coal reduced to the state of small coal, and either left in the mine or lessened in value, but a large proportion of many of the best seams of coal is left under ground, and the resources of fuel, with which England has been so munificently blessed, are reduced by at least one-third.

Surely the question of mining education is one of national importance. Is it to be doubted that, if the captains of our metallic mines were better acquainted with mineralogy, the works would be more judiciously carried on for the discovery of ore, and that valuable ores would seldom be overlooked and irrecoverably lost, as is the case in even the best conducted mines, and to a greater extent, we may reasonably infer, than in the coal mines? Is it not a reflection on their mechanical skill that the washing and cleaning of mineral ores should be carried on by manual labor in lieu of machinery? At many mines where a single unbalanced rope is used for winding the produce, the fact is altogether overlooked, that for every ton of mineral raised since the commencement of the works an equal amount of power has been thrown away in raising a ton of rope. It is rather a nice calculation to determine all the conditions for balancing one rope or two ropes in a shaft at every point of their course, and to determine the economical value of wire ropes, which, for the same strength, are only half the weight of hempen ropes, and are now being much introduced. With the exception of the Cornish pumping engines and the first motion engines, required for fast winding, little attention is paid to the proportion and condition of their working aprts. It sufficiently shows how little care is given to the steam-passages, expansion, condenser, or pumps (by small errors in which one-half the power may be lost,) to mention that the name of Watts' indicator is almost unknown.

It can do no harm to refer to the still more opinion of one of the Juries of the Great Exhibition—which states, "In reporting on the hydraulic machines exhibited, it is impossible to refrain from adverting to the general neglect of those elementary principles of scientific knowledge, on which the perfection of such machines always depends, and in some cases their whole usefulness in an economical point of view. The exhibition affords positive evidence of the sacrifice of a large amount of capital, and of much mechanical ingenuity, due simply to the ignorance of certain acknowledged principles of hydraulic science."

That important operation, the surveying of underground works, as usually conducted, is little indebted either to trigonometry or to the modern improvements in instruments. The compass is almost exclusively used, although its want of accuracy and its daily and periodical variations, are notorious. In approaching old workings filled with water it is dangerous to trust to a plan thus made, and the more so if, as is usually the case, the variation of the compass has not been carefully registered and allowed for. A divided limb similar to that of a theodolite, added to a compass, makes it 30 times more accurate.

Out of all these illustrations which I have given of the sacrifices entailed by the want of scientific knowledge in mining, none are so striking as the lamentable sacrifice of life and health in an occupation which presents many dangers for science and care to overcome. In the coal mines of Great Britain there occur annally 1000 fatal accidents, one out of every eight colliers meets with a violent death, and the proportion of accidents, in other mines does not fall far short of this. An evil of still greater magnitude arises from the heated and noxious atmosphere in which the miners work, and which is surely due to the neglect or ignorance of the first principles of pneumatics and ventilation. As far as has been hitherto ascertained, the sacrifice thus entailed amounts to no less than cutting off the miner's life 12 years before his time; shortening his years of productive labor by one-third; keeping down the amount of this kind of labor in the same proportion, and aggravating unecessarily, the toil and suffering of those who gain their living underground. According to the experiments of Coulomb, the difference of a man's labor in a temperate and in a hot climate is nearly one-half. How much, then, must be sacrificed in mines where the temperature is commonly between 70 and 80 degrees, and has been known to exceed 105 degrees? Add to this, that in the majority of mines the abstraction of oxygen, by the breathing of men and horses, by the lights, and by the decomposition of animal, vegntable, and mineral substances, is so great that candles burn with difficulty, and it will be readily admitted, that under a good ventilatoin, the miners could do one-quarter more work—a fact, indeed, which they have frequently admitted. In Cornwall it is commonly asserted that the cost of the deep mines is so great, in consequence of the heat and the "poor air," that they cannot be carried deeper: whereas science, abundantly confirmed by practice, shows that the deeper the shaft the greater is the amount of natural ventilation produced by it.

(Concluded next week.)

WHEELING EXTENSION PITTSBURGH AND CLEVELAND RAILROAD.—We learn that an election was held at the city of Cleveland, on Wednesday, the 3d inst., for directors of the Wheeling extension of the Cleveland and Pittsburgh Railroad. It resulted in the selection of the following gentlemen: Joshua Hanna, Pittsburg; Hiram Stow, Beaver; S. Brady, Wheeling; Alex. Doyle, Steubenville; John S. McIntosh, Wellsville; Cyrus Prentiss, Ravenna; W. A. Otis, Zalmon Fitch, Moses Kelly and Jno. A. Foote, Cleveland; and H. C. Kingsley, Connecticut. Mr. Rockwell was elected President, and Mr. Prentiss, Vice President.—*Wheeling Intelligencer.*

☞ The bridge over the Cahaba river is so far completed, that the cars on the Alabama and Mississippi Rivers Railroad can now cross it.

Monetary and Commercial.

The past week has been without any material change in the commercial aspect of our city. Circumstances at home have somewhat favored a re-action for the better, but the news of disasters west and south of us have checked, to a great extent, operations in those directions. There is a fair amount of produce waiting shipment, but merchants do not know to whom it would be safe to consign, and hence prefer to wait. It is hoped however that a few weeks will clear up the wreck and give confidence in those who have weathered the storm. Fears have been expressed about the effect on the Ohio and Mississippi Railroad of the failure of Messrs. Page & Bacon, of St. Louis, but it is confidently believed by those interested that it will not seriously impede the progress of the road. Such is the confidence in Messrs. Page & Bacon that it is believed that if their necessities had been known, the means would have been furnished to prevent their disaster.

We hear of a few regular transactions in the discount line at the safest banks, and may look hereafter for an extension of accomodation to depositors.

We quote first class paper at 12 to 15 per cent.. second class difficult of negotiation at any price, but when secured, from 18 to 36 per annum.

Exchange which had gone up to 1½, is now again selling by most houses at 1 per cent., on New York and Boston. New Orleans is scarce, and commands about ¾ premium. Gold is selling at 1 to 1½ premium, and buying at ¾ to 1 per cent.

The Price Current gives the following summary of the Pork business, of the present and past year up to January 16:

Receipts for week,	14 708
" previous,	311 870
	326 668
Up to date last year,	379 056
Deficit,	52 388

Advices from the East are of an encouraging nature. Money in New York is said to be much easier than for several months. The Banks are extending their discounts, and affording in the regular way, the relief which has been sought in outside borrowing at exorbitant rates.

The bank statement shows nearly $14,000 000 in gold, in the city banks of New York; while the receipts from California are on the increase, and no specie is shipping to England.

There is more doing in foreign exchange than at last advices, and rates in consequence a shade higher. Sterling ranges from 106 to 108¼.

The stock market already begins to feel the effect of returning confidence in higher rates, and there is a decided improvement. There is a demand for State Stocks and other classes which pay dividends for investment.

JAMES HARDMAN, *Auditor.*

SUGGESTION FOR REDUCING THE SHOCK IN RAILWAY COLLISIONS.

The greater part of the mischief which is done in cases of collision on railways seems to be caused by the overturning and piling up of the carriages. If the blow which stops each carriage is not delivered exactly in the centre of gravity,—and it certainly will not be—there will be a tendency to motion about that centre, either laterally or vertically, and the force being enormously great, either the carriages will turn over on their sides, or will break the coupling chains and be piled up endwise, just as would happen with the links of a chain in motion which should suddenly meet with an obstacle in front; but it will be seen that if the motion of the same chain were destroyed, by stopping the last link instead of the first, there would be no such lateral or vertical forces. So, also, if the opposing force could be made to strike the last carriage in a train instead of the first, and the coupling-chains were sufficiently strong, the passengers would be thrown forwards violently, but the carriages would remain on the rail, and no injury to the passengers more serious than a severe contusion would be possible.

This I think could be easily effected by having a bar of iron as long as the carriage hung under each of them, capable of sliding freely in the direction of motion. Have one corresponding thereto under the engine, and projecting in front of it as a common buffer, so that these rods may form a continuous shaft, and communicate the force from one end to the other without affecting the carriages. When the train is made up, fix a cross-bar to the axis of the last carriage, and let the end of the proposed bar but against it. In the event of a collision the coupling chains may break, but the greatest part of the momentum would have been destroyed before the ordinary blow is given. If there is no great objection to having this bar projecting for several feet beyond the front of the engine, each of the rods in question might be furnished with a common spring-buffer end, so that the force would be received by as many springs as there are carriages in the train, instead of by the single engine buffer, as is now the case. Perhaps, Sir, some of your practical correspondents may see a means of carrying this notion into effect, or will otherwise be good enough to point out the difficulty in doing so.—*Mechanics' Magazine, London.*

SWEEPING STREETS BY MACHINERY.

New York City, enterprising though it may be in business, is "old fogy" enough in its municipal management. Thus Cincinnati has surpassed it in enterprise for Steam Fire Engines, Boston for a Fire Alarm Telegraph, and Philadelphia has left it behind in machinery for sweeping streets. Philadelphia is celebrated for cleanliness, and New York for dirt, and this may account, in a measure, for the introduction of two new machines for cleaning the streets of our Quaker sister city. These machines were first tried on the 16th inst., and are thus described by the *Ledger:*

"The apparatus consists of a series of brooms on a cylinder, about two feet six inches wide, attached to two endless chains, running over an upper and lower set of pulleys, which are suspended on a light frame of wrought iron behind a cart, the body of which is near the ground. As the cart wheels revolve, a rotary motion is given to the pulleys conveying the endless chains, and series of brooms attached to them, which being made to bear on the ground successively, sweep the surface and carry the soil up an incline or carrier plate, over the top of which it is dropped into the cart."

One of the machines was made in Philadelphia, and the other imported from England. The latter appears to have done its work well; the other, from some small defect in the construction, which can be easily repaired, gave out. Our Philadelphia cotemporaries do not speak in a very decided tone respecting these machines, but we hope they will prove eminently successful for the purpose intended.—*Scientific American.*

BRANCH ROAD FROM CLINTON TO AMITE STATION.

The Feliciana Whig has a glowing article in favor of a branch railroad from Clinton, East Feliciana, to Amite station on the Great Northern Road, a distance of thirty-two miles, making a round hundred miles from the city, which is about forty miles less than the distance from New Orleans to Clinton by the Mississippi river. The Whig argues that if the poor lands of the Piney Woods have been so enhanced in value by the Great Northern Road, how much greater would be the advance in the beautiful Magnolia lands of East Feliciana. Our friend's argument ought to carry conviction to the mind of every landholder in that section of country. It has been clearly demonstrated that the advance in the prices of the lands along the route of the Great Northern Road have far exceeded in amount the cost of the road. We should think that the rich parish of East Feliciana ought to be able to make thirty-two miles of railroad. One thing it is well for them to calculate on, and that is, that they will have to depend on themselves for the means of building the road. There is no hope of the city giving another cent for railroads for the next ten years. The country must now go to work and do its duty. We can assure them that every dollar expended on this object will be returned to them tenfold in the increased value of their lands.

THE NEW ORLEANS AND JACKSON RAILROAD.—A correspondent enquires whether it be true as stated some weeks since in our columns, that Col. W. S. Campbell succeeded in selling half a million of the bonds of this road in the month of November. Such we presume, was not the statement to which our correspondent alludes. Our statement was, that Col. Campbell, much to the surprise of every body, in the then depressed state of American securities, had succeeded in negotiating a sale of Louisiana bonds for the benefit of the New Orleans and Jackson Railroad, at prices which were exceedingly favorable to the Company. It was the only sale of American securities which had been made in London for months: and the very favorable terms secured, are solely attributable to the address and judgment of Col. Campbell and his peculiar fitness for the negotiation which had been entrusted to him. It will probably be the last sale of American securities made in London at high prices, pending the existing war in Europe.

At present, there is in London a want of money, but no want of confidence in the Government,—and hence the high price of consols. Should the war be protracted beyond our present expectations, a gradual want of confidence in European securities, must ensue; and then, we shall perceive the price of consols rapidly falling, and sellers will naturally be again looking to investments in American securities. *Free Trade* is the real cause of money being scarce in the United States and England, while it is abundant on the cotinent. But for the fact that the United States and England have raised three hundred millions of gold in California and Australia since 1849, the bubble of *Free Trade* would long since have exploded; and even as it is, with this enormous amount of gold to sustain it, there can be little doubt that demise is close at hand. All sane men, feel that our existing difficulties are the legitimate fruit of the tariff of 1846; and the English people in like manner, are getting heartily sick of free trade. The continent has reaped the benefit of our folly; but we think the remedy is not far distant.—*New York Courier.*

INTERESTING DECISION.—We think we are serving the public in calling attention to the Court of Common Pleas, in Baltimore, October, 1854. The case was one of more than usual importance, especially to all who use platform scales, as the decision of the Court established the fact, that in all matters of dispute as to weight, the scales manufactured by the Messrs. Fairbanks & Co., of Vermont, are the standard.

The dispute arose from a discrepancy of weight between one of Fairbanks' Scales in use by the Baltimore and Ohio Railroad Co., and one of another manufacture.

The case occupied the Court two days Judge Marshall, in delivering his dicision. stated as the result of the evidence, that the accuracy of Fairbanks' Scales was establishe beyond all question.

ATLANTIC AND PACIFIC RAILROAD.—A few days since, it was stated that SPRIGMAN & BROWN were shipping one hundred construction cars for this road, by the way of Red River; these cars being necessary, as the first fifty miles of the road is nearly all graded at this time, and the work is progressing rapidly. Mr. Samuel A. Sargent, the Agent of the Company, is still in the city, making purchases for working material, which will be shipped during the coming week. The supposed difficulty existing between Gov. Pease and this Company, does not affect its operations, as the old charter which they are working under gives them 16 sections to the mile. The whole length of this road from Red River to El Paso, is about 800 miles.—*Cin. Com.*

THE BANKERS' ALMANAC, FOR 1855,

WILL be published in a few days, containing—

I. Calendar and Chronology of Important Financial Events.

II. List of Banks in the United States, December, 1854. Capital, Name of President and Cashier of each.

III. List of Private Bankers in the prominent Cities and Towns of the United States and Canada; also in Europe, South America, &c.

IV. Usury Laws of the States, with the Laws relating to Damages on Domestic and Foreign Bills of Exchange in each State.

V. Commercial and Financial Tables of the United States and Europe.

CHARLES FRODSHAM'S
IMPROVED WATCHES!
BEGGS & SMITH,
JEWELERS,
No. 6 West Fourth St.,
Adjoining the First Presbyterian Church,
CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isocbronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, soch as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler	.....	Massachusetts
John E. Thayer, Esq.	.....	"
Enoch Train	.....	"
E. C. Bates,	.....	"
F. W. Thayer,	.....	"
Wm. Whiting,	.....	"
Geo. M. Thacher,	.....	"
David Dyer,	.....	"
Alvin Adams,	.....	"
Billings Briggs,	.....	"
David Weld,	.....	"
Hon. Ebenezer Lane, E. F. Osborne, Esq.	.....	Sandusky. Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	.....
" 14	..... $230
" 16	.....
" 18	 250
" 20	 275
" 22	 300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.
Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.
To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,
HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.
August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

(On Baltimore & Ohio Railroad, midway between Baltimore and the Ohio River.)

MANUFACTURERS of *Engine Lathes, Planing Machines, Drill Presses, Hand Lathes, and other Machinists Tools.* These tools are built in a superior manner, from the very best materials, and are particularly adapted for railroad shops and all others repairing first rate machinery. Our location is very advantageous for shipping work to the West or South. Orders and communications receive prompt attention. Address

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;
Mixed do do 1-32 to ½ inch thick.
Plain do do 1-32 to 1 inch thick.
Pure do do
Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., John ockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoeuberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr3 140 and 142 Main street

RAILROAD MAP.

WE have now ready A RAILROAD MAP OF THE WEST, containing ALL THE RAILROADS construct ing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a competent hand.

The size of the sheet is 24 by 28 inches, and can be sent by mail.

Price—plain..... 40 cents.
Colored in outlines..... 50 cents.
Full colored..... 75 cents.

Liberal discounts will he paid to those wishing them in quantities

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to U. P. JAMES will secure prompt attention

ENGINEERING!!

The undersigned is prepared to furnish
SPECIFICATIONS, ESTIMATES, AND PLANS,
In general or detail of all kinds of
Steam Vessels, Engines, Boilers, Mill Work, &c
Particular attention given to the superintending of
LOCOMOTIVES, TENDERS, CARS,
And Railway Machinery of every Description,
While under construction.

AGENT FOR THE PURCHASE of, on commission, all articles required for Railroads, Steam Vessels, Locomotives. Engines, Boilers, Machinery, &c.
General Agent for
ASHCROFT'S STEAM GAUGE, ALLEN AND NOYES' METALIC SELF ADJUSTING CONICAL PACKING, DUDGEON'S HYDRAULIC JACK.

Also, for Water Gauges, Indicators, Steam Whistles, &c., &c.
CHAS. W. COPELAND,
Consulting Engineer,

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Groenville over a good Macadamized road.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,
Through Tickets from all Parts of the West,
ARE NOW SOLD IN
Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED
For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION
The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,
The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,
And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

J. M. DOUGHERTY,
Superintendent.

☞ The Omnibus Line will call for Passengers in any part of the city, by leaving directions at the above offices. CLAYTON & GRANT.

oct. 17.

Cincinnati to Indianapolis.

TO CHICAGO IN 15 HOURS.
TO ROCK ISLAND IN 25 HOURS.
TO ST. LOUIS IN 31 HOURS.

ALL THE WAY BY RAILROAD.

FOR Terre Haute, La Fayette, Michigan City, Chicago, Peru, Galena, Rock Island, and St. Louis.

Passengers will find this the most pleasant route of any to the West, as it passes through the richest and most thickly settled portion of the State of Indiana. In taking this route, passengers will reach Terre Haute, Lafayette, Peru, Michigan City, Chicago, Rock Island, Galena and St. Louis, as soon as by any other leaving Cincinnati, and with less fatigue, in consequence of several of the other roads not being fully ballasted.

TO TERRE HAUTE AND LAFAYETTE BY DAYLIGHT, by way of Hamilton, Eaton and Richmond.

CINCINNATI, LOGANSPORT AND CHICAGO RAILROAD.—Three daily trains, at 6.30 A. M., 8 A. M., and 4 P. M., from Cincinnati, Hamilton and Dayton Railroad Depot.

Passengers leaving Cincinnati on the 6.30 A. M. Lightning Express, reach Indianapolis at 11 A. M., resume at 1.15 P. M. for Terre Haute, and 12 M. for Lafayette, Michigan City, Chicago, Galena, Rock Island and St. Louis, reaching Chicago at 8.30 P. M., in time to connect with night trains for Galena, Rock Island and St. Louis.

Baggage checked to Indianapolis.

Passengers leaving Cincinnati at 8 A. M., Richmond Mail Passenger Train reach Richmond at 11.05 A. M., connecting with trains for Hagerstown and New Castle. Returning leave Richmond at 3.10 P. M., arriving in Cincinnati at 6 P. M. This train stops at all way and flag stations.

FARE:

From Cincinnati	to	Richmond	$1 75
"	"	New Castle	2 50
"	"	Indianapolis	3 50
"	"	Terre Haute	5 75
"	"	La Fayette	5 50
"	"	Michigan City	7 75
"	"	Chicago	9 00
"	"	Rock Island	14 00
"	"	Galena	14 25
"	"	Saint Louis	15 50

Passengers leaving Cincinnati on 4 P. M. train, sleep at Indianapolis, resume at 6 A. M. for Lafayette, Chicago and Rock Island, and 1.15 P. M. for Terre Haute.

For information and through tickets, please apply at the General Railroad Ticket Office, No. 169 Walnut st., next door below the Gibson House, or to W. A. Latham, at the Cincinnati, Hamilton and Dayton Railroad office, corner of Broadway and Front Streets, under the Spencer House, or at the Sixth street Depot.

JOHN W. SHIPLEY, Agent.

The Omnibus Line will call for passengers in any part of the city, by leaving their orders at the offices.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to. this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is beld closo to the shaft, and the oil journals, are secure from dust yet easy of access; the brassos may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and aro not detained from the road for repairs ONE TENTH part of the time which is necessary when other hoxes are used.

The business of a railroad can he done with a much less number of cars, with these hoxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may he examined, and arrangements may he made for the right to use the same, with tho subscriber.

Railroad Record.

E. D. MANSFIELD, - - - - - - Editor.
J. A. JAMES, W. WRIGHTSON, - - - Associate Editors.

CINCINNATI:

THURSDAY MORNING,.....JAN. 25, 1855.

E. D. MANSFIELD,

May be found at the office of the *Railroad Record*, 167 Walnut st., between the hours of 11 A. M. and 1 P. M.

Railroad Printing.

WE have now attached to this office an extensive Composition and Press Room and Bindery, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish Railroad and other Reports, with or without Maps or other Illustrations, gotten up at short notice and in superior style. Also, Blanks of any description, adapted to the wants of the various departments of the Railroad service, and to the wishes and tastes of the parties.

Also, Railroad Tickets and Conductors' Checks. Our patent Card Press, enables us to supply any demand at Short Notice and in Unequalled Style.

Also, Blank Books, ruled to any pattern, with or without Printed Headings, and bound in the most substantial manner.

With the numerous facilities for doing the Best Work, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,
Railroad Record Office, 167 Walnut st Cin.

Contract r's Book of Working Drawings and Machinery.

Mr. W. J. Keeler, the agent for this desirable work, is spending a few days at the Burnet House, of this city. We have before expressed an opinion of this work, and are glad to learn that every engineer and superintendent coincides with us. Letters from abroad may be addressed to Mr. Keeler, care of the Record Office.

Railroad Maps of Ohio, Indiana and Illinois.

We have received from the publishers, D. B. Cook & Co., of Chicago, three beautiful lithograph Maps of the above named States. They are got up on card board, and in excellent style. We observe that Mr. Cook has introduced the feature of putting the stations on the finished routes, which is a most useful idea. Messrs. Cook & Co. have also an edition of their maps in pocket form.

RAILWAYS OF THE NORTHERN AND MIDDLE STATES.

In continuing our review, we shall now trace the general system of Railways in the Northern and Middle States. The first state, which really progressed with activity and earnestness in railways, was Massachusetts. This state has now the largest extent of railways, in proportion to surface, in the American Union; and none is so well provided with them, in proportion to its population and business, as Boston.

In considering the railways of the Northern and Middle States, the best mode will be to state first the number and extent of these, in each state, and then the connections forming the most important lines.

1. OF MASSACHUSETTS.—

	No.	Complete.	In Progress.
Roads	42	1,135 miles	67 miles.

This excludes small portions of some of the roads which are not in Massachusetts, so that the above amount belongs exclusively to that state. Of these lines, *nine* terminate directly in Boston, and afford four great leading highways, viz.: one leading to Maine, and New Hampshire; one to Vermont, and Lake Champlain; one route to Albany, and Buffalo; and one to New York. All of these are modified by lateral roads and various routes; but these are the general directions, and objects of the Boston Lines.

2. OF MAINE.—

	No.	Complete.	In Progress.
Roads	12	435 miles	91 miles.

The most important road in Maine, is the Grand Trunk, or as the Maine Branch is called, the Portland District. This connects Portland with Montreal, and is designed to form part ultimately of a great system of Railways, leading from Portland through Canada, to the Pacific Ocean, at Puget's Sound.

3. VERMONT AND NEW HAMPSHIRE.—Neither of these states having any great city, they have no *centre* of railway. Nearly all their roads are connected with Boston and Portland. The following is the number, and extent of railways within these states:

	No.	Complete.	In Progress.
Roads	26	909 miles	83 miles.

4. CONNECTICUT ANN R. ISLAND. — The principal railway routes in these states, are those which connect New Nork and Boston, Providence and Boston, and the towns of the Connecticut Valley. They nre as follows:

	No.	Complete.	In Progress.
Roads	26	638 miles	100 miles.

Of the unfinished lines in these states, the Providence, Hartford, and Fishkill is an exceedingly important one; for when finished, it will connect the states of Rhode Island, and Connecticut, through their centre with a direct and great thoroughfare to the West, *via*, the N. York and Erie Railroad at Newburg, opposite Fishkill. It seems to us, this work is of more importance, than it has generally been reported to be. It will debouche on the Hudson, at a very excellent point (Fishkill), and in a very rich country.

5. NEW YORK RAILROADS.—The great N. York lines, are the New York and Erie; the Central and the Hudson River. The business of these roads is immense.

The following is a summary of the New York Railroads:—

	No.	Complete.	In Progress.
Roads	32	2,594 miles	575 miles.

Of these the New York and Erie comprises 464 miles; the N. York Central 533; the Hudson River 150; and the Harlem 131. The analysis of the business of these roads, as compared with that of the Canals of New York, would make an interesting subject. Enough is already known to prove, that the railways are already seriously competing with the Canals for freight; and the State officers of N. York are calling upon the State to *tax* the railways, in order to prevent competition. The tolls on the Canals are already reduced below the point which they can bear, and yet the competition is increased. When the competition of the Pennsylvania Central, and the Baltimore and Ohio Roads comes into full operation; the effects on the New York Canals will be felt, yet more seriously.

6. NEW JERSEY RAILROADS.—The principal lines of New Jersey are the Camden and Amboy, and the New Jersey Central, which are great thoroughfares between New York and Philadelphia. The following is the summary of Jersey Railroads:—

	No.	Complete.	In Progress.
Roads	10	457 miles	— miles.

7. PENNSYLVANIA RAILWAYS. — Pennsylvania is remarkable for a great system of railways, making a net work for the coal mines, and finally leading to Philadelphia, through the Reading Railway and the Schuylkill navigation.

The great railway of Pennsylvania is the Central, from Philadelphia to Pittsburgh, there connecting with the Ohio and Pennsylvania, and going on through the entire West. This road has an immense advantage, in being so central and direct, that it can secure more of the Western trade, than any other.

The summary of railways in Pennsylvania, is as follows:—

	No.	Complete.	In Progress.
Roads	62	2,218 miles	1,118 miles.

In addition to the above, there is a small portion of railway in Delaware. The summary of railways in the Northern and Middle States, presents the following aggregate:—

	No. Roads.	Complete.	In Progress.
In Massachusetts	42	1,135 miles	67 miles.
In Maine	12	435 "	91 "
In Vermont & N. H.	26	909 "	83 "
In Con'ticut & R. I.	13	638 "	101 "
In New York	32	2,594 "	575 "
In New Jersey	10	457 "	— "
In Pennsylvania	62	2,218 "	1,118 "
In Delaware	2	16 "	43 "
10 States	199 r'ds	8,112 "	2,076 "

The proportion of miles of railway to square miles of surface, is as follows:—

In Massachusetts	1	mile to	7	square	miles.
In Maine	1	" "	73	"	"
In Vermont & N. Hamp.	1	" "	22	"	"
In Connecticut & R. I.	1	" "	9	"	"
In all New England	1	" "	21	"	"
In New York	1	" "	20	"	"
In New Jersey	1	" "	20	"	"
In Pennsylvania	1	" "	22	"	"
In the above ten States	1	" "	21	"	"

The entire surface of these ten States, has about one-half the number of miles of railway which they will have; but Massachusetts and Connecticut have more than a full proportion. This is owing to their being crossed by so many lines connecting New York and Boston.

In the Northern and Middle States, are five remarkable lines of railways. These are:—

1. The Boston and Western Line.—This is composed thus:—

Western, including Worcester	200 miles.
New York Central	300 "
Boston to Buffalo	500 "

2. New York and Montreal composed of—

The Hudson River	150 miles.
Albany to Rutland	94 "
Rutland to Rouse's Point	107 "
Rouse's Point to Montreal	47 "
New York to Montreal	398 "

3. New York to Dunkirk.—

New York and Erie	460 miles.

4. Philadelphia and Ohio.—

Pennsylvania Railroad	353 miles.
Ohio and Pennsylvania	187 "
Ohio and Indiana	131 "
Philadelphia to Fort Wayne	671 "

About four hundred miles of this is in Pennsylvania.

5. The Great City Line, viz:—

Portland to Boston	105 miles.
Boston to New York	236 "
New York to Philadelphia	87 "
Philadelphia to Baltimore	93 "
Baltimore to Pittsburg	333 "
Portland, Boston, N. York, etc.	854 "

These lines all connect in Ohio with all other railways leading West, of which we shall speak hereafter. In fine, already the great cities and towns of our country are connected by railways with each other, and with the whole country; so that there are few parts, except in the extreme West, which may not be reached hy rail.

In two more numbers, we shall complete our review of all the railways in the nation, which as we have considered the subject in detail, will give a very correct picture of the whole.

Northern Canada Railway.—The Railroad from Toronto, on Lake Ontario, to Collingwood, near the head of Georgian Bay, Lake Huron, is completed. The route is almost an air line, and the distance, which formerly occupied a week to travel, is now accomplished in three or four hours.—*Com. Reg. Sondusky.*

EDITORIAL CONVENTION AT ZANESVILLE.

We had hoped to have been present at the session of the Convention on the 16th and 17th, but were prevented by engagements which we could not control.

The cordial meeting of the Press, and the free interchange of sentiment, cannot fail to be of the highest importance, and we are glad to see that on motion of Col. Schouler, of the Cincinnati *Gazette*, measures have been taken to provide for the permanent organization of the Editorial Society.

The address was delivered by S. S. Cox, Esq., of the *Statesman*, Columbus, and the poem by Anson G. Chester, of the Buffalo *Express*. Among the resolutions passed, were sentiments of the highest importance for the promotion of good feeling and kindly courtesies between those whose honest differences of opinion might otherwise lead them to dissent on the great questions of the day.

There is one resolution, however, which we would rather have seen in another shape, or rather would not have seen at all:—

Resolved, That the Press of Ohio has always labored to promote the best interests of our State; in doing which, the weight of its influence has, in an especial manner, been thrown on the side of Railroad enterprises, not so much for the personal benefit of individual companies, as for what we have believed, and now believe to be, for the general interest of the whole State.

Resolved, That the courtesies which have been extended to the Press by Railroad companies, we have never regarded as special favors to us, but as a recognition on the part of the corporations of the support which the Press has always so liberally given them.

Resolved, That the Railroad corporations, by concentrated and united action, having as a business operation resolved to withhold those courtesies from the Press in the future; Therefore be it

Resolved, That we, Editors of Ohio, from this time forth, will inmitato the example set us by the Railroad corporations, and do that which is *our* business interest to do—make with them our courtesies "*a fair business transaction*," and recommend this course for the adoption of our brethren throughout Ohio.

It is true, that the Press has been of immense importance to railroads, and that almost every road in the country is indebted, in a greater or less degree, to the courtesies of those who write for the people; and it is also true, that the railroads have recently resolved to withhold from them the courtesies of their respective lines. This comes ungratiously from corporations, which owe, in a great part, their existence to the unpaid for efforts of public spirited editors. But there are still circumstances connected with the action of the railroads, which will show at once the necessity of salutary reform. The number of railroad employees is great and increasing, and owing to the prodigality with which passes had been granted, the number had increased to an enormous extent. It was supposed to be a sufficient ground for expecting a pass, that a person or some of his friends, had at some time been a brakeman or switch-tender on that or a neighboring road. Such, indeed, was the feeling on this subject, that it began to be considered dishonorable for a conductor to expect fare from a casual acquaintance. On the part of steamboats it was expected of the railroads to pass free over their lines, from the captain down to the deck-hand; and in this manner abuses crept in, which called loudly for reform. Reform was attempted, and the whole system of indiscriminate passes given by any and every officer of a road, is wholly swept away. We do not believe that it ever was the intention of those who first moved in this matter, to array themselves in hostility to the Press of the country; and further, we do not think that a public spirited editor can unconcernedly stand and ignore the events which affect the greatest interest of the land. There must and will be, a mutual dependance between the prosperity of immense interests and the written thoughts of those who have charge of periodical publications.

SKETCHES OF CITIES IN THE WEST, NO. 3. NASHVILLE, TENN.

Nashville is the capital of the State of Tennessee, and in itself, a large and prosperous city. It will probably become one of the largest of the purely interior cities of the south-west.

Geographically, Nashville is situated on the banks of the Cumberland River, in the midst of a great field of limestone, which has given the soil great fertility, and not very distant from commercial deposits of iron and coal. It lies in Middle Tennessee, not far from the exact centre of the State, and in 1853 was the largest town in the State.

The progress of population has been as follows, viz.:

In 1830	5,566
In 1840	6,929
In 1850	10,478
In 1853	15,000

In thirteen years, Nashville has doubled, and in the last three or four has advanced 50 per cent. It will probably continue to increase rapidly until it attains some 50,000 inhabitants. The state of Tennessee has just begun to develope its immense resources, and Nashville is well situated to receive advantage from its development.

Its *water commerce* is not very great; but is enough to connect it with all the immense river coast, to which steamboats can reach. The Cumberland river is navigable for small boats nearly always, when the Ohio is; and the trade with Cincinnati, by steamboat, is large. In the port of Nashville, there are enrolled 4,082 tons, and several steamboats are built there each year.

The *adjoining country* is very fertile, and probably equal to any other district in the United States, for the culture of Indian corn. Sixteen counties immediately round Nashville, raise *twenty millions of bushels of Indian corn!*

Nashville *may* become a large manufacturing place, for the deposits of iron and coal are sufficiently near to give it all possible advantages; if the mechanical and manufacturing branches of business be properly fos-

tered. Nashvillo will, in time, also be a great railway center.

The *Nashville and Chattanooga Railway* connects it with the entire network of southern railways, leading to Savannah, Augusta, and Charleston. It is the first point nn the waters of the Ohio, touched by the railways of the South.

The *Nashville and Memphis Railroad* will connect it with Arkansas and Texas.

The *Nashville and North-Western Railroad*, passing through the iron region, will intersect the Mississippi at a very favnrable point.

The *Nashville and Henderson Railroad* will connect it with the lower Ohio.

The *Nashville, Louisville, and Cincinnati Railroad* will connect it with all the north.

And the *Nashville and Knoxville* will connect it with Virginia, through the immense mineral region of East Tennessee.

Nashville will, therefore, become a large and prosperous place, if it attends carefully enough to the development of its own advantages.

INCORPORATION OF CLEVELAND, TENN.

This town, situated in Bradley County, in the south eastern part of Tennessee, is rapidly growing in importance. It is the point of junction for the East Tennessee and Georgia, one branch of the West Tennessee and Atlantic. and the Alabama and Tennessee railroads, and communicates by the East Tennessee and Georgia railroad, with the Memphis and Charleston and the Nashville and Chattanooga railroads, thus forming as well as Chattanooga, a railroad center for southeastern Tennessee, and portions of the adjacent states.

The following abstract of the organization of the Town Council, we find in the Cleveland *Dispatch* :—

TUESDAY EVENING, Jan. 9, 1855.

In compliance with an act of the General Assembly, passed January the 7th, 1850, for the incorporation of Towns and Villages the Aldermen elect for the Town of Cleveland met and on presentation of their credentials, were legally sworn into office before J. H. Davis, acting justice of the Peace for Bradley County.

The following gentlemen constitute the Board of Aldermen for the ensuing year: Dr. John G. Brown, F. A. Carter, J. H. Davis, C. H. Mills, Paschal Carter, Jas. M. Graigmiles, Geo. W. Parks.

The Board then proceeded to elect their officers for the ensuing year, which election resulted in the choice of the following gentlemen : Dr. John G. Brown, Mayor ; C. H. Mills, Recorder and Treasurer ; Edward Burgess, Town Marshall.

On motion, that a committee be appointed to draft suitable By-Laws and Ordinances for the government of the Corporation, the following gentlemen were appointed, and instructed to report their proceedings to the Board at their next regular meeting :—

Jas. M. Craigmiles,
F. A. Carter,
Dr. John G. Brown, } *Committee.*

On motion the Board then adjourned to meet on Tuesday the 16th inst.

C. H. MILLS, *Recorder.*

Railroads.

AMERICAN RAILROAD JOURNAL—OHIO & MISSISSIPPI R. R.

It is a very common thing, when either individuals or corporations meet with misfortunes, to find many persons willing—if not to kick them down hill—to do as much toward it as they dare. This amiable propensity is much increased, if there happens to be a little personal interest behind it.

It is not, therefore, singular, that the suspension of Page & Bacon, in connection with the affairs of the *Ohio and Mississippi R. R. Co.*, should furnish an occasion for a sneer at the one, and an attack on the other. It is one of the incidents to such cases, which may always be expected. But we are a little surprized to find it so openly expressed, in the following paragraph from the *American Railroad Journal* :—

"But such subscriptions could not be secured, consequently parties had to be induced to take up under the prospects of enormous profits in construction, which fully equalled 50 per cent. of the whole cost of the road. Seduced by such prospects, Messrs. Page & Bacon became at last the contractors for the whole road. (We will not here insist upon the incongruity of Bankers becoming railroad contractors.) What they could not borrow they were compelled to supply out of their own pockets, which had they been twice as capacious as they are, would not have carried them through. As the project itself, if built with the utmost economy, can be regarded as only a passable one, it will be seen that the idea of making money out of it was a very preposterous."

The first contractors for the road were MESSRS. H. C. SEYMOUR & Co., who took it for $9,000,000, of which $5,500,000 was to be paid in Stocks and Bonds. The road was 340 miles long. Now, we fully agree with the *Railroad Journal*, that the profits under *that* contract would not be very large ; but, they might be deemed reasonable. Where then was the profit, which the *Journal* assures was "fully 50 per cent.," to come from? Mr. Bacon took the contract when the road was more than half finished, and he took it with an *addendum* that he was to have half the profits a certain length of time. *Half the profits* is a very different thing from half the "whole cost of the road," which the *Journal* undertakes to make out. This contract was a reasonable one, both for Mr. Bacon and the Company. If the road get into full operation there would be profits, according to the opinion of men best informed on the subject.

But here we come to a difference of opinion, with the wise men of Gotham. The *Journal* says that this nearly straight line road, with a six feet guage, from Cincinnati to St. Louis, is at best only "*passable one*," that is indifferent. Well, if such a road so located be only *passable*, what sort of concerns must they be, which are so much be-puffed in New York ! What must be thought of *Winslow, Lanier & Co.*, in trying to build a rival road between two others from Terre-haute to St. Louis ?

The kernel, in the *Journal's* commentary, is contained in the following paragraph :

At Vincennes, an eastern railroad connection will be found which will bring this division into immediate use. As the most difficult and expensive portion of the road remains to be built, we doubt whether its construction would add immediately to the percentage of receipts on the whole amount expended. The company luckily were never in a better position to stop, than they will be, when the Illinois Division shall have been completed.

Exactly—if the Ohio and Mississippi Railroad stops at Vincennes, it will be a capital piece of luck for the gentlemen who are interested in the Terrehaute and St. Louis straight line. It will give them a chance to speculate on their prospects—at present not very good.

But if the luck be good for Messrs.— of the *Atlantic and Mississippi Co.*, it will by no means be so good for the cities of Cincinnati and St. Louis or the intermediate country. They *need and must have a great Central thoroughfare.* When made, its profits will be greater than any single road made in America. For Mr. Bacon, there is little need of commiseration, beyond the shock of the passing hour. A man who has borne himself so nobly in public enterprise, and won so high a character, is beyond the praise of brokers, and can afford to lose the flattery of the *Journal.*

Whether the *Ohio and Mississippi Co.* will stop their road at Vincennes or not, we are not informed, but this we know, that it is not for the advantage of any party interested, to suffer such an event. Bondholders, Stockholders, and Cities should all unite, if possible, to prevent such a catastrophe.

COBOURG AND PETERBORO RAILROAD.

This little road, extending from Cobourg on the Grand Trunk railroad and the north shore of Lake Ontario to Peterboro on the Otonabec river, was recently opened with a grand celebration. The president and directors of the railroad, with the engineers, contractors, and principal citizens of Cobourg, were received in Peterboro with a speech of welcome by the Mayor, which was responded to in a happy manner by Mr. Scott, president of the road.

In a commercial point of view, this road will add greatly to the advantages of Cobourg as a lumber market. The immense forests which surround Mud Lake and its tributary and connected chains, afford abundant material for commercial enterprise. Pine lumber will be cut on the line of the road, transported to Cobourg and shipped to Rochester and Oswego; much of it will find its way through the latter port to Albany and New York.

CLEVELAND MEDINA & TUSCARAWAS R. R.

We learn from the notices of the Wheeling papers, that this road is now in a position to give reasonable hope of its completion. It commences at the mouth of Indian Wheeling Creek — Bridgeport — extends up the Creek to or near Flushing, thence to Freeport, and Urichsville, thence up the beautiful and rich valley of the Tuscarawas river, through New Philadelphia, Canal Dover, Bolivar, Navarre, Massillon, thence to Medina, and to Grafton, on the Cleveland and Columbus road, 25 miles south of Cleveland, in all about 120 miles.

This road connects at Wheeling with the Hempfield road, and thence to Philadelphia, and with the Baltimore and Ohio Railroad to Baltimore and Washington. At Grafton with the southern division of the Cleveland and and Toledo road to Toledo. These connections furnish valuable facilities for the shipment of produce and manufactured articles, or for the reception of material needed for use along its line.

The cost of the road will be comparatively light as there is little tunneling, and the bridging of an easy kind, and for the last 80 miles, the country is nearly level. In the whole distance of about 120 miles, there is nearly 100 miles of straight road, no curve of less radius than 2800 feet, and no grade over 50 feet to the mile. The last 40 miles near Wheeling pass through a section rich in coal and iron ore, there being beds of coal of six feet thickness. There is also a valuable deposit of coal on the line of this road, in Wayne County, O.; the whole line passes through a rich agricultural region. Hence it will be seen that there are ample facilities for building up an immense mining and manufacturing interest.

The Wheeling *Gazette* says "at Masillon this road crosses the P. and O. and C. A. & Z. roads, which will throw upon it the trade designed for Baltimore and the South. This point is 80 miles from Wheeling and 108 from Pittsburgh, and is growing in commercial and manufacturing importance more plainly, and healthfully than any other town in the state, while Medina, the heart of a rich county, is also improving in all her interests without any road as yet.

Forty miles of this road from Grafton to Massillon are now completed ready for the rail, the company only waiting for the fall of iron, to purchase and lay the rail. This iron, of a good quality will probably be purchased at about $40 per ton, which will make the cost but about $4,000 a mile, for the iron. When running to Massillon it will, with its connections, do a good business. A portion of the road this side of Massillon is under contract, and as the work is light to its junction with the Steubenville railroad, can be soon completed.

There are now 230,000 dollars of stock subscribed, as we learn, this side of Massillon, beside the transfer of $100,000 by the Belmont Co., and $300,000 pledged from Wheeling. We have no doubt but when the proper time arrives, the citizens of Wheeling will add largely to this stock, as it is their manifest interest to do, and that the stock along the line be nearly or quite doubled, which will enable the company to construct the road in defiance of hard times or the pressure in Wall street."

IMPROVEMENT OF THE OHIO.

This question has of late been freely discussed, and many plans proposed to improve the navigation. Each season seems to diminish the water in the channel during the dry weather, and the tyranny thus exercised over our commercial interests is growing insupportable. To remedy this, it has been proposed to dam up vast quantities of water in the Alleghanies, to be used as feed reservoirs in summer. This is a novel and gigantic plan, and at first view would seem to be one of the extravagances of a scientific mind untutored by practical life. But Mr. Ellet, who first proposed it, has proved by his tables of the observed fall of rain, and by his measurements of the rocky valleys of the head waters of the various tributaries, that it can be carried out, and given the desired relief.

Another proposal has recently been revived of supplying the necessary water by a feeder from Lake Erie. The only objection to this is that water will not run up hill, Pittsburg being 127 feet above the level of Lake Erie at Cleveland. A level plain passing through Cleveland, would strike the Ohio somewhere near Littart's Rapids, and when the descent necessary to give a current is taken into consideration, it will be seen that no advantage can be obtained by this method.

The project of locks and dams throughout the length of the stream, if properly carried out, would give the desired relief. But after all it becomes a serious question, whether the same expense devoted to other means of improvement, would not be more beneficial; and in determining this question, we may be aided somewhat by the experience of our neighbors of New York. From the proceedings of the Canal Board, which met on the 28th of October, we extract the following comparative table:

	R. R. freight receipts.	Canal Tolls.
1850	$1,122 432	$3,486 172
1851	3,102 453	3,722 163
1852	3,366 280	3 179 145
1853	4,824 519	3,168 546
1854 (est.)	6,000 000	3,000 000

From this it will be seen that in four years the receipts for freight on three lines of railway competing with the canals, has increased over five times, while the canal tolls has decreased over one-seventh, and it is further necessary to reduce the present canal tolls to prevent the gradual abandonment of canal transportation.

So decided is the increase in railroad freight, and the decrease in canal freight, that it was a serious question at the meeting of the Board, whether much more should be expended or no. The Erie Canal alone, has cost a vast sum of money and the proposed enlargement of the three canals, will require an expenditure of *twenty millions* more to make them as effieacious as they should be.

Such is the experience of New York, and her people are yet paying the fiddler to prove to the world that they will, if they chose, dance to old fashioned music.

CONTRACTOR'S MACHINES.

It frequently happens in the construction of new lines, and sometimes in the repairs of old ones, that a contractor or engineer finds himself totally at a loss for some simple piece of machinery, which he has seen and used a hundred times; but for the making of which he could not, without care and reflection, give positive directions. A switch or a turn table, or a few dump cars may all impede his operations, and require his personal attention for a larger time than he should abstract from his other duties. Now it is precisely this want that is sought to be filled up by the Contractor's Book of Working Drawings and Machinery. The working-drawing is given, and the exact sizes of every piece of iron or wood used on the construction of the machine needed. The following table will illustrate its design. We wish that we were able to give a good drawing of the turn table:—

BILL OF TIMBER.

Number.	To what purpose applied.	Kind of timber.	End Dimensions.	Length.	Feet B. M.
2.	Cross head timbers	W. Oak	4x4	14.0	37.33
4.	Rails 4x4 at one end and 4x6½ at the other	" "	...	.. 6.0	42 60
2.	Stops to unlock car or carriage	" "	...4x4..	4 6	12.00
2.	Levers for moving table forward	" "	...4x4..	8.0	21.33
1.	Balance beam on carriage 4x4 at one end, 7x11 at the other	" "	..	..11.0	39.42
1.	Block under balance beam	" "	..3½x6..	2.6	4.37
1.	Piece from carriage to Pivot	" "	...3x8..	4.0	8.00
2.	Rails for carriage	" "	...4x6..	5.9	23.00
2.	Timbers for ends of carge	" "	..3½x14.	4.3	34.71
1.	Levelling block at Pivot.	" "	...5x8..	1.0	3.33
1.	Plank through centre of table	" "	..1½x15	11.0	20.62
1.	Plank through centre table	" "	..1½x15.	13.0	24.37
2.	Plank ties (at rear)	" "	...3x12.	5.3	31.50
8.	Pieces on ties (at rear)	" "	...3x4..	1.0	8.0

The remainder of plank for table to be of such lengths and widths, as will work to the best advantage; all to be 1½ inches thick. Amount required is about 320.00 feet.

It will thus be seen that with the proper bill of iron, bolts, etc., which accompanies the above, and the shaded Lithograph, an ordinary workman who is at all used to working from written directions, cannot fail to construct a turn-table, without the tedious process of first making a drawing or sending for patterns.

Selected Railroad News.

RAILROAD CONVENTION.

The "Convention" has effected a permanent organization, and must be hereafter known as a "Society" or "Association." The meeting at the Astor House, on Tuesday, January 16th, was principally composed of the delegates to the former meetings. No business of any importance, beyond the organization, was done. We have not seen reported the *name* under which the association is to be known. The officers are, however, as follows:—

John P. Jackson, *President.* J. B. Jervis; C. F. Pond, of Hartford, N. H., and Springfield, R. R.; Thomas Hopkins, Boston and Worcester R. R.; Samuel Marsh, New York and Erie R. R.; Wm. G. Harrison, Baltimore and Ohio R. R.; S. S. L'Hommedieu, Cin., Ham. and Dayton R. R., *Vice-Presidents.*—H. S. Blatchford, N. Y. and Harlem Railroad, *Secretary.* W. D. Bishop, Nangatuck Railroad, *Assistant Secretary.*

The general objects of the Convention are, substantially the following, viz: To secure the best system of efficiency and safety; the best system of discipline, economy division of service, and constant superintendance; the just standard of passenger fares and freight charges; the abolition of Perquisities and free tickets; the introduction of coal or coke, in place of wood, upon locomotives of suitable construction, and the saving of oil; the general reform of the railroad system, looking to its permanent influence on the welfare and ultimate destiny of our race; the best possible organization of checks, and the best system of accountability, by which the interests of the public and of stockholders may be best protected from fraud, neligence, or incompetency in the administrative departments.

The next session of the "Convention" is announced for April 10th; to be held at the Astor House in this city.

The action of the "Convention" is to be, in all cases, advisory only. The prominent railroad men of the country have thus constituted themselves a body, to whom the public will naturally look hereafter, for the general improvement of railroad construction and management. They will be expected to devise and recommend measures for the promotion of public accommodation, the increase of railroad earnings, and the reduction of railroad expenses.

We do not doubt that the relations of railroads with travelers and forwarders, will be properly examined and adjusted by the "Convention."

The rights of the stockholders of railroads will also demand a great amount of attention. This portion of the public will look to the "Convention" for the solution of the following, among other problems:—

Whether American iron is not better, in the long run, than English iron for railroads. Whether continuous rails are not better than the present fractional system of rail tracks. Whether railroad tracks would not require less expenses for repairs if properly ballasted with broken stone. Whether electric signals cannot be arranged to proceed the progress of railroad trains. Whether iron bridges are not cheaper, stronger, and more durable, than wooden bridges. Whether speeds of from ten to twelve miles an hour are not more economical, for freight trains, than speeds of eighteen to thirty miles. Whether railroads should be allowed to cross each other, at grade, elsewhere than at established stations. Whether railroad cars cannot be properly ventilated. Whether self-acting brakes cannot be brought into use, and whether increased economy and safety would not be obtained in doing so. Whether railroad travelling cannot be made comfortable by night. Whether by offering suitable premiums to engine men, accidents might not be diminished, and the pay of engine men thus become adequate to the services rendered by them. Whether practical men are not more competent, than judges and lawyers, for the administration of Railroads. Whether a limitation should not he made to the number of proxies allowed to be held by one man, at Railroad Elections. Whether weekly reports of earnings and expenses are not practicable, and worthy of being carried out.

These are but a few of the matters, besides those already recognized, upon which the "Convention" will be expected to deliberate.—*R. R. Advocate.*

MICHIGAN SOUTHERN AND NORTHERN INDIANA RAILROAD.

Below we give a comparative statement of earnings of the Michigan Southern and Northern Indiana Railroads for the two years ending 31st ult.:

1853.

	Passengers and Mail.	Freight and Miscellaneous.	Total.
Jan.	$34,040 41	$16,159 92	$50,200 33
Feb.	42,752 04	16,137 39	58,890 02
March	66,975 61	20,168 67	87,144 28
April	77,815 69	34,079 21	111,894 90
May	86,547 75	61,777 35	148,325 10
June	96,560 82	52,385 37	148,946 19
July	79,730 43	35,552 43	115,282 86
August	95,173 39	60,225 09	155,396 48
Sept.	126,874 10	70,646 89	197,520 99
Oct.	144,836 72	78,739 24	223,575 96
Nov.	111,710 97	53,614 79	165,625 76
Dec.	82,048 88	28,327 45	116,376 33
Total.	$1,045,067 40	$528,113 80	$1,573,181 20

1854.

	Passengers and Mail.	Freight and Miscellaneous.	Total.
Jan.	$58,254 33	$30,070 99	$88,325 32
Feb.	65,006 38	28,790 70	93,797 08
March.	107,779 57	41,807 43	149,586 94
April.	125,347 08	44,486 57	169,833 65
May.	153,107 61	74,312 47	227,420 08
June.	150,151 74	64,096 29	214,248 03
July.	97,369 54	47,123 00	144,492 63
Aug.	104,160 07	63,701 94	167,865 01
Sept.	158,662 20	65,287 81	223,050 01
Oct.	225,124 52	65,130 48	200,255 00
Nov.	168,472 34	62,978 20	241,450 54
Dec.	(Estimated.)		150,000 00
Total.	$1,413,435 52	$587,788 07	$2,151,924 29

It will be thus perceived that the earnings are large, and the excess of earnings, this year over the last, is very great, say 35 per cent. The earnings of the last two months present an aggregate of almost $400,000. We congratulate the small creditors of the Road, who have been compelled to wait long for their dues, that out of such an immense income they must soon be paid. We have heard the most bitter complaints for the last few weeks that the creditors of the Road have had no pay since October. We trust this is somewhat of an exaggeration. It cannot be possible that a Board of honorable and enlightened gentlemen, after presenting these solid columns of figures to inflate or sustain their stock in Wall street, will longer retain those pitiful sums, which would help greatly to relieve the communities to which they are indebted.—*Toledo Blade.*

PHILADELPHIA AND COLUMBIA RAILROAD.

We have been favored with a copy of the Annual Report of the Superintendent of the Philadelphia and Columbia Railroad, embracing the fiscal year which terminated 30th of last November. The total expenses for working and maintaining the road, and for the purchase of ten new locomotives, and other machinery, are stated at $493,221. Net revenue over all expenditures, $322,974, or nearly equal to 6 5-8 on $5000,000. The running of five passenger trains, and two trains to West Chester, cost $117,920 20. They carried one hundred and sixty-seven thousand nine hundred and sixty-five passengers eighty-one miles, aad twenty-one thousand seven hundred and ninety-three emigrants, yielding a gross income for the passenger trains of $291,980 84, or over running expenses of $174,069 64. The cost per passenger was sixty-two cents, six and a half cents more than the cost in 1853. In that year a through passenger was estimated to have traveled but seventy miles; for the present year the whole distance of the road was calculated. The increase in the number of passengers is nineteen thousand one hundred and fifty-nine, and toll $21,746 10. The emigrant passengers were carried on one of the passenger trains without additional cost for power and agents.

The tolls collected at the different offices, amounted to $821,525 14, being an increase over 1853, of $11,046 26. The increase of 1853 over that of 1852, was $40,834 49. The amount collected on the canal tonnage at Philadelphia, was $56,863 36, being $4,670-65, less than is due this road for hauling the canal tonnage both ways; and the amount, therefore, to which this road is entitled is $4,670 65 more than was collected at the different offices on this line for the railroad. The amount considered as earned by this road, is then $826,195 79 against $786,-127 31 earned in 1853, an increase of $40,-058 48.

The average cost of wood per cord was $3 58—that of coal per ton, $3 92—that of coke per bushel, 13⅜ cents.

Average consumption of wood per trip, 2¼ cords	$8 05
Do. of coal per trip, 708-1000 tons,	2 77
Do. of coke,	47¾
Do. of oil and cotton waste,	84
Sawing wood, and moving wood and coal,	1 04
Cost per trip of 81 miles, for fuel, oil and waste.	$13 17¾

Nearly one dollar and twenty-eight cents more than last year, owing to the advance in the price of wood, and using engines of a larger class.

The excess in the number of cords of wood was two thousand seven hundred and thirty-four, and the advance in cost was $15,514 78.

In future, coal must be the main article for fuel. The present winter it will be used almost entirely. For the past six months coke has been used in the passenger engines to pretty good advantage.

The total expenses of the motive power of the year, are stated at $397,076. This aggregate includes engineers, firemen, horse power, engines, coal, etc.—*Phil. Enquirer.*

Miscellaneous.

ON SCIENCE IN THE MINES.

BY HERBERT MACKWORTH, M. INST. C. E., INSPECTOR OF COAL MINES.

(Concluded.)

The state of the mines of this country, which are liable to explosions of fire-damp, strongly manifests the want of scientific knowledge. When explosions occur, the investigation is almost exclusively directed to the manner in which the gas was fired, instead of enquiring how the gas accumulated. If the air-currents, passing through the mine, were all arranged so as to ascend throughout the workings, from the lowest to the highest, the gas being only half the weight of the air, would run off of itself, and could not possibly accumulate: consequently no explosion could occur. This arrangement, although required by law in the fire-damp mines of France, Belgium, and Prussia, is very rarely carried out in any English collieries, and the neglect of it is the primary cause of nearly all the explosions. Another provision of safety, which has become universal in the above countries, having been determined by the united opinion of the most eminent engineers, is the employment of locked safety lamps in all mines which may contain explosive gases. All the most destructive explosions in England, for the last seven years, are attributable to the use of unprotected flames. The cost of working with safety lamps hardly, if at all, exceeds the cost of working by the light of a candle, and yet this indispensable condition of safety—this magnificent discovery in mining science, of which England claims the glory—is repudiated, and 300 lives are annually sacrificed to the opinions of so-called "practical" men.

Before entering upon the educational branch of my subject, it may be interesting to view the gradual progress of mining science, and the extent of our national wealth and importance, which are attributed to it as well as to extraordinary mineral resources, and to Anglo-Saxon enterprise. The history of the application of science to mining is, in fact, the history of the extension of mining operations. Although there are traces and records of mining at a very early period in Britain, to obtain tin, lead, iron, gold, etc., it was not until the sixteenth century that it began to rise to its present importance. About that period coal was first employed at Newcastle for other purposes than blacksmiths' fires and burning lime, and a small quantity of copper was sent from Cornwall to South Wales to be smelted. In 1690 the mundic copper ores were first smelted, and were brought for that purpose to Bristol by Sir Gilbert Clark. In In 1726 the amount of copper ore raised in Cornwall was 5000 tons; in 1853 it amounted to 189,000 tons, yielding 11,839 tons of copper, being one-third of the whole production of Europe, and worth 1,124,561*l.* Poorer ores are now worked, so that in the same period the yield of pure copper has decreased from 11 1-2 per cent. to 7 1-8 per cent. The amount of tin ore raised in Cornwall and Devon in 1853, was 8866 tons, valued at 600,000*l.*, forming about 9-10ths of the produce of Europe. The production of lead in the United Kingdom reached 65 000 tons, and of silver 818,000 ozs. In the year 1750, before the general application of pit-coal to smelting, the quantity of iron made was 30,000 tons—now it amounts to upward of 2 1-2 million tons annually. The consumption of coal in London, in the year 1700, was 470,000 tons, it now exceeds four millions, whilst the production of this country has increased to 34 1-2 million tons.

The following table will illustrate the relative productiveness of some of the principal countries :—

	Area of coal district.	Production in 1852.
Great Britain	5,000,000 acres	50,000,000 tons.
Belgium	370,000 "	6,500,000 "
France	740,000 "	5,500,000 "
Prussia	390,000 "	6,000,000 "

The improvement in the operation of clearing the mines of water, and to which their great extension has chiefly been owing, dates from about 1700; they were drained previously by chain pumps, worked by water-wheels of small dimensions; about that time, Coster first introduced water-wheels of from fifteen to forty feet diameter, of the kind which are still occasionally used. In 1696 Savery wrote a pamphlet, entitled the *Miner's Friend*, to explain his method of "raising water by impellent the force of fire," but he failed in introducing his engine. The first steam engine applied to pumping water from mines was Newcomen's, at Griff Colliery, near Coventry; it was immediately after applied to the Huel Vor Mine in 1713, but in 1740 there was still only one steam-engine in Cornwall. The first underground engine was erected in 1776 at Whitehaven. Watt's first patent, in 1769, opened a new era in the application of power, leading, eventually, to the Cornish pumping-engine, which presents the highest economy hitherto attained by machinery. The "duty," as it is called of such engines, has occasionally exceeded 100 million pounds, raised 1 foot high, by the consumption of a bushel of coals. Probably the most remarkable instance of the application of pumping power was during the sinking of the Dawdon shafts. There were 18 lifts of pumps employed, each of 19 1-2 in. diameter, and nine lifts of 16 inches. The horse power amounted to 1310, and 10,000 gallons of water were pumped up per minute, which was afterward stopped back, and the shaft made perfectly dry by lining it with cast-iron tubbing. Minerals were originally raised to the surface by means of the common windless, and afterward by the horse-whim. The water-wheel was next applied, and on the introduction of Newcomen's engine the water expended was sometimes pumped up again by it. A water-wheel with double buckets, in order to reserve the motion, and alternately raise or lower the rope, succeeded. This was improved by Smeaton, who retained the single buckets, but made the rope roll to throw out of gear and reverse. A stride further in the march of improvement was to apply Watt's engine directly to the rope roll by means of a crank. Now we have direct action engines of 200 horse power applied to a rope roll or drum 16 feet diameter, capable of being controlled by a child, which can draw two tons at a time, from a depth of 500 or 600 yards, at a speed of 20 miles per hour, and bring to the surface 800 tons of coal per day. This high speed can only be attained by having guides fixed to the sides of the shaft, which answer the same purpose as the rails on a railway. It is calculated that wooden guides save their first-cost twice over in the first year, and yet less than half the coal mines, and very few of the metallic mines, have adopted them.

The great extent of the Newcastle mines has called for improvement in underground haulage. By means of underground engines, and endless wire-ropes, planes of 1000 to 3000 yards in length, are worked like the original system on the Blackwell Railway, at a speed of from ten to fifteen miles per hour. The result of these improvements is, that the expense of bringing the coal to the surface, in some of the largest mines, is one-third of the cost in that large number where mechanical science is unknown. To the demand for fossil fuel, consequent on the early exhaustion of our forests, we owe the first germs of the railway system For these, as well as for the application of the locomotive to the edge rails, we must look to the engineering talent of the North of England collieries. Beaumont introduced wooden rails into Durham in 1630, which were followed by the cast-iron tramways invented by Curr. Wooden sledges, trams with wooden wheels running on planks, ending with cast-iron wheels, and flanged wrought-iron wheels, were the halting places in the gradual order of development.

The scientific principles of ventilation were laid down in 1764 by the French academician, Jars. In 1760 Spedding, of Newcastle, first carried the air, in one current, into every part of the mine; but it was left for Mr. Buddle, in 1813, to introduce the greatest improvement in modern ventilation —the splitting of the air — which is simply providing several channels for the air to pass through the workings instead of one. By this means it is evident that a much larger quantity of air, and consequently in a cooler and purer state, flows through the mine.

ANTHRACITE COAL TRADE OF THE U. S.

We give below the official quantity of Anthracite coal shipped from the different regions in Pennsylvania during the year 1854, together with the quantity of Semi-bituminous coal shipped from Dauphin county, in comparison with the supply of 1853, from the same sources:

Schul. region.	1853.	1854.	*Inc.*	*Dec.*
By railroad	1,582,248	1,987,854	405,606	
By canal,	888,695	907,154	18,550	
Pinegrove,	80,660	91,472	10,802	
Schul. total,	2,551,603	2,986,490	435,067	
Lehigh region,	1,808,544	1,246,418	166,574	
Del. and Hud. Co.	491,209	440,944		53,265
Penn. Coal Co.	512,777	496 648		16,120
Wilkesbarre,	442,511	492,689	50,178	
Shamokin,	15,500	63,506	48,099	
	5,097,144	5,726.489	699,119	69,394
Wisconsin,*	69,007	51,500		11,567
Dauphin Co.*	29,000	63,000	34,000	
	5,195,151	5,847,269	733,119	80,901

Total increase in 1854 80,901

*Semi-bituminous.

Of this increase Schuylkill county furnished 435,067 tons, and other regions 217,251 tons. Of the aggregate supply furnished, there was derived

From Schuylkill county..... 2,986,670 tons.
From other regions..... 2,860,699 "

Total supply in 1854..... 5,847,369

The total supply of coal from all the different regions in Pennsylvania, since the commencement of the trade in 1820, amounts to..... 48,907,860 tons.
Of this quantity, Schuylkill county furnished ..... 25,190,604 "

Leaving supply from all others..... 23,717,256

The mining capacity of this region for producing coal is considerably ahead of the ability to transport it to market—and the increased supply that can be furnished this year will depend in a great measure, upon an early demand, and the regularity of that demand during the season.—*Pottsville (Pa.) Miners' Journal.*

Monetary and Commercial.

We have to notice during the week a gradual increase of confidence in business circles, and a nearer approach to legitimate transactions than we have had for several months past. The general impression seems to incline to the opinion, that we have experienced the worst of the crisis, and that we shall soon he moving in the old tracks, only with increased caution.

In the money market we notice an increased demand for accommodation, probably due to the near approach of the first of the month. The banks are not yet able to accommodate all their customers. In rates we have no material change to note from our last quotations.

There is a better tone of feeling in the stock market than at previous dates. Ohio & Mississippi, which had sunk to 22 in the alarm succeeding the announcement of the failure of Page & Bacon, of St. Louis, has again advanced. On Saturday, sales were made at 27, and on Tuesday at 29½. These rates show conclusively the confidence felt in the enterprise. Indeed, it can hardly be supposed that this, one of the most important roads in the Union, and one which is destined to he the greatest thoroughfare between the east and west, can fail to he a paying enterprise, and as such, command the confidence of those who have capital to use, and discernment to use it well.

Exchange on New York has declined to 1 per cent and still lower, ¼ per cent. being the ruling rate. Gold is 1 per cent. premium. From the East, we have advices of an encouraging nature. It is stated that the money market is decidedly easy to those who have good securities to offer, and that there is a surplus of capital seeking safe investment. Rates are quoted at 6 to 7 per cent. for demand loans, and 9 to 12 per cent. on first class 60 day paper. We quote the following from Thompson's Reporter:

The financial events of the past week have been the taking of $4,600,000 Erie Loan at 80, and the failure of Page & Bacon, of St. Louis. The effect upon the Stock Market was contrary, in both instances, to what would generally he expected. The day after the Erie Loan was taken the market fell off 1 per cent., while the day after the failure of Page & Bacon was announced, Stocks advanced 2@3 per cent. The Stock Market is very sensitive, and is put up and down upon any trifling causes. Some of the subscribers of the new Erie Loan are selling out, and the Bonds, although taken at 80, are freely offered at 78½@79.

A large business has been done during the week in State Stocks, and the tendency of prices has been to an improvement. The largest sales have been in Virginia's, which are firm at 93½@93¾. Georgia and North Carolina 5's are selling at 94@95. Indiana State 5's, 79@80. Missouri 6's have been forced on the market, owing to the late failures, and have sold down to 87@88. There is a decided improvement in all dividend paying Stocks, and orders for investments are coming in more freely. Illinois Central Bonds sold on Saturday as high as 72½, but the notice just issued by the Company, that another loan of $3,000,000 is wanted, has put them down again, selling yesterday at 69½@69¾, and closing to-day at 70.

Exchange on London has advanced to 108¾, and there is a better demand. No specie is leaving the country, while new supplies from California continue to arrive. There is now in the New York City Banks about $1,600,000.

Sales at the New York Stock Board, Jan. 20, 1855:

November	27,050 17	54,825 33
December	19,147 50	29,010 35
Total	$226,818 48	$564,237 73

From the *Milwaukie News*, Jan. 3d.

CLEVELAND AND TOLEDO RAILROAD.—The following will show the comparative earnings of the Cleveland and Toledo Railroad for the month of December, and the first week in January.

December, 1854	$72,971
December, 1853	54,467
Gain	$18,504
First week in January, 1855	16,436
" " " 1854	9,318
Gain	$ 7,118

VIRGINIA AND TENNESSEE RAILROAD.—Receipts for the month of December, 1854 :

From Freight	$12,372 41
From Passengers, United States Mail, and Express Freight	7,800 00
Total	$20,172 41

The total receipts from the same sources in December, 1853, amounted to $11,638 49.

INAUGURAL ADDRESS OF GOV. POLLOCK, OF PENNSYLVANIA.

We have looked with interest at the messages of the various Governors for the present year, as indicative of the proposed line of legislation on the two great questions of the day, Banking and Railroads ; and particularly on Pennsylvania, as a neighbor whose disposition to accommodate or otherwise may seriously affect our commercial interest. The message of the Governor contains some valuable suggestions as to banking, but is perfectly silent on the railroad question. Perhaps it was supposed that the authority of the judiciary was sufficient to settle the general points of controversy which have isolated, as it were, Pennsylvania from her sister States.

The message of the Governor opens with general remarks on the authority and origin of governments ; dwells on education, moral and intellectual, as the safeguard of republics and of patriotism ; recommends to the fostering care of the legislature the agricultural, mining, manufacturing, and commercial interests of the State, and particularly of the interests of Philadelphia, her commercial emporium.

The Governor then proceeds to the discussion of the system of banking, in which he says :

A sound currency is essential to the prosperity of a commercial people. All classes of society, and every branch of industry, in their varied interests and economical relations, are interested in securing and maintaining a safe circulating medium. To accomplish this result wise and prudent legislation is necessary. The creation of a well regulated and carefully guarded system of banking, is not only sound policy, but beneficial to the legitimate trade and commerce of the country, and aids in developing her great natural and industrial resources. Our present system of banking, with the limitations, restrictions and liabilities, individual and otherwise, imposed by law on these institutions, has become the settled policy of the State. The checks and guards thrown around them should not be lessened or removed. Their own safety and the security of the public require their continuance.

Notice of numerous intended applications to the Legislature for new banks, an increase of banking capital and savings institutions, has been given as required by the constitution. Without desiring to assume a hostile attitude towards all banks, the propriety of incorporating all that may be called for, under the notice given, can not be justified or defended. The extravagant, improper or unreasonable increase of banks and banking capital, is not demanded by the wants of the community, and will not and can not be sanctioned by the Executive. The present commercial and financial embarrassment of the country ; the depressed state of trade ; all past experience, and the more recent experience of some of our sister States, as seen in their ruined banks and depreciated currency, demonstrate the necessity of legislating cautiously and prudently on this subject.

The number of banks, and consequently the amount of banking capital, should be limited to, and regulated by, the proper demands of active and healthy trade, and the actual business wants and necessities of the community. This policy, honestly insisted upon and pursued, would protect the country from the disastrous consequences of improvident banking. An extraordinary and unnecessary increase of banks and banking facilities, in seasons of great general prosperity, leads to extravagant and ruinous speculation. Such increase in times of commercial distress, aggravates and prolongs the evil it was designed to remedy. Entertaining these views I will not hesitate to sanction the re-chartering of old and solvent banks, which by prudent and careful management, and an honest adherence to the legitimate purposes of their creation, have merited and received the confidence of the public. Nor will I refuse to sanction the incorporation of new banks, when indispensably neeessary and clearly demanded by the actual business wants and interests of the community in which they may be located. To no other, and under no other circumstances, can I yield the Executive consent.

The message then reviews the question of the sale of the public works and the reduction of the State debt, and severely censures the action of those who created it. Increased care in granting licenses is strongly urged, and the desecration of the Sabbath reprobated.

We next come to a point in which we are compelled to differ respectfully in opinion. The Governor says :

Experience has demonstrated the impolicy of subscriptions by municipal corporations to the stock of railroad companies. This is especially true in relation to county subscriptions. The practice should be avoided, or at least not encouraged by future legislation.

Here we think the Governor is in error. So far as we are aware, "experience has not demonstrated the impolicy of subscriptions by municipal corporations to the stock of railroad companies." The very reverse of this is true, and can be shown by numerous instances in the history of many of our most important and flourishing railroads ; and particularly is it true that country subscriptions, when they really insure the *completion* of a rail road through their limits, are safe and profitable investments. The increase in the prosperity and value of the county would amply repay any subscription that is likely to be made, even if the road were never to redeem its bonds.

The Governor notices, in the closing paragraphs of his message, the vexing questions of the Compromise, and closes by acknowledging his obligation for his office and promising to discharge his duties to the best of his ability.

☞ At a meeting of the Stockholders of the Sandusky, Mansfield and Newark Railroad Company, held in Sandusky Jan. 18th, the following gentlemen were chosen Directors for the ensuing year, viz :

G. B. Wright, Wells Robbins, Newark ; E. G. Woodward, Mt. Vernon ; James Purdy, Robert McComb, Edward Sturgis, sen., Mansfield ; John W. Sprague, Huron ; Freeland T. Barney, Sandusky; W. H. Stockwell, Cincinnati.

The meeting was quite fully attended, a large amount of stock being represented, and the Board of Directors was chosen by nearly an unanimous vote. It is composed of gentlemen of integrity who are thorough and practical business men.—*Com. Reg. Sandusky.*

ATLANTIC, TENNESSEE AND OHIO R. R.—The stockholders of this road held a meeting in Jonesborough on the 1st instant and elected the following gentlemen Directors for the present year :

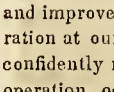
Carter County.—Jacob Cameron, Jas. Carriger, S. W. Williams, Jas. T. Carter, W. W. Rockhold, G. T. Magee, and A. M. C. Taylor.

Sullivan County.—John S. Gaines and Jas. D. Rhea.

Washington County.—A. E. Jackson, L. Gifford, Tho. T. Young, John Lyle, Jos. S. Rhea, and G. W. Telford.

Gen. A. E. Jackson of Jonesborough, was elected President, and Dr. A. Jobe of Elizabethton, Secretary and Treasurer. The office of the company is located at Elizabethton.—*Clev. Tenn., Dispatch.*

TO RAILROADS AND CONTRACTORS.



HORSE POWERS.—The undersigned being agents for the sale of R. H. Pease formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

GAS.

AUBIN'S PATENT.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

T. WRIGHTSON & CO.,
167 Walnut-st., Cin'ti.

DURYEE & FORSYTH'S
PATENT
PLATFORM SCALES.

WE ARE AGENTS FOR DURYEE & FORSYTHS' UNRIVALLED PLATFORM SCALES, FIRE PROOF SAFES, TRUCKS, LETTER PRESSES, AND SUGAR MILLS.

We deem it unnecessary for us to say a word in their commendation, as their reputation for accuracy, adaptation, and durability, is too well known to require it. HEWSON & HOLMES,
dec27 83 and 85 Walnut-Street.

CINCINNATI STOCK SALES.
HEWSON & HOLMES,

Have constantly on hand and for sale at the Stock Board, Merchant's Exchange, and at private sale, Railroad, Bank, and Insurance Stock, and Railroad Bonds.

Regular sales at Stock Board on Wednesday and Saturday of each week.

CHARLES FRODSHAM'S
IMPROVED WATCHES!
BEGGS & SMITH,
JEWELERS,
No. 6 West Fourth St.,
Adjoining the First Presbyterian Church,
CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of CHARLES FRODSHAM'S NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler	.....	Massachusetts
John E. Thayer, Esq	.....	"
Enoch Train	.....	"
E. C. Bates,	.....	"
F. W. Thayer,	.....	"
Wm. Whiting,	.....	"
Geo. M. Thacher,	.....	"
David Dyer,	.....	"
Alvin Adams,	.....	"
Billings Briggs,	.....	"
David Weld,	.....	"
Hon. Ebenezer Lane, E. F. Osborne, Esq.	.....	Sandusky. Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	.....
" 14	..... $230
" 16	.....
" 18	 250
" 20	 275
" 22	 300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.
Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.
To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the bands been moved, and to day it is 20 secouds only slow. Respectfully yours,
HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.
August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

(On Baltimore & Ohio Railroad, midway between Baltimore and the Ohio River.)

MANUFACTURERS' of *Engine Lathes, Planing Machines, Drill Presses, Hand Lathes, and other Machinists Tools.* These tools are built in a superior manner, from the very best materials, and are particularly adapted for railroad shops and all others repairing first rate machinery. Our location is very advantageous for shipping work to the West or South. Orders and communications receive prompt attention. Address

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the rounning of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thurough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

RAILROAD HOTEL.

CINCINNATI, O.

THE GIBSON HOUSE, Cincinnati, is situated on Walnut-street, between Fourth and Fifth, in the immediate neighborhood of all the Railroad Offices. For comfort and convenience it is believed that this hotel is unsurpassed. It is heated with steam from the first floor to the fifth, thus making it the most desirable winter house in the West. The proprietor hopes to enjoy a share of the patronage of Railroad men.
A. WETHERBEE, Proprietor.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passongor road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive powor and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

(BOURDEN'S PATENT,

THE subscribers offer for sale this valuable Gauge. It is adapted to Locomotive and other steam boilers, indicating with accuracy the continual variations of steam within the boiler, enabling the Engineer to maintain a uniform and safe pressure. Any of the Eastern Railroads may be referred to for proof of its importance and value.

BRIDGES & BROTHER,

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,

May 18.6. Office, No. 64 Courtland st., New York.

GUNPOWDER,

MANUFACTURED BY

The Hazard Powder Company,

HAZARDVILLE, CONN.

H. G. HAZARD, President.

A. E. DOUGLASS, Secretary.

THE undersigned are always prepared to furnish Mining and Blasting Powder to any extent, delivered at any point on the lines of railroads, or any other places of public improvements in the West or South, at the very lowest rates. Also, SAFETY FUSE of the best Eastern manufacture.

We would respectfully urge all contractors and consumers to call upon or correspond with either of us before arranging for their supplies elsewhere.

To the trade generally we would offer all the brands of Sporting and Rifle Powder manufactured by the above concern.

FULTON CAR WORKS,

CINCINNATI, OHIO.

THE Proprietors of this establishment would respectfully call the attention of Railroad Companies in the West and South to their establishment at Cincinnati.—Their facilities for manufacturing are extensive, and the means of transportation to the different points speedy and economical, They are prepared to execute to order on short notice, eight-wheeled Passenger Cars of the most superior description. Four or eight-wheeled Baggage, Cattle, Freight and Gravel Cars. Also, Crank and Lever Hand Cars, Trucks, Wheels, and Axles fitted.

WASHBURN WHEEL

Having obtained the *exclusive right* to make this wheel

In Cincinnati, Covington and Newport, they are now prepared to furnish Railroad Companies with that Celebrated wheel, with or without Axles. Also, Journal Oil Boxes of any pattern, and Castings for cars fitted to order at the shortest notice.

Address KECK & HUBBARD,
Fulton Car Works Cincinnati, Ohio.
ap.12 Office 62 East Second Street.

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars. We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,

GREATNESS IN LITTLE THINGS, OR WAYSIDE VIOLETS.—By Ruth Vernon.

This is the title of an attractive volume of 320 pages, just issued from the press. The writer, in her short and pretty preface, says: "It has been the aim, in the following simple tale, to show that true greatness does not consist only in shining deeds of prowess, or in carrying out the schemes of a lofty ambition; but that it may be exhibited just as truly when performing, with humility, firmness and self-denial, that round of daily duties, those 'little things' which may alike be found in the path of all."

Published and for sale by H. M. Rulison, 115½ Main street, Cincinnati.

RUNNING ARRANGEMENTS—LITTLE MIAMI RAILROAD.—The winter arrangements of this road, which took effect January 29th, will be found in their appropriate place in our advertising columns.

FROG POINTS.—Our readers will find an advertisement of a superior cast steel Frog Point, among the new advertisements. It is of Cincinnati manufacture, and is decidedly of superior quality.

NORTH-WESTERN RAILWAY CONTARCTORS.—Contractors will please notice the advertisement of Mr. McNeale, Engineer of the North-Western Railroad, (Tenn.) This road is 160 miles in length, and has already secured to it about $2,300,000 capital; which, it is presumed, will be sufficient to ensure its construction.

RAILWAY REVIEW—THE SOUTH-WEST.

The South-West comprehends Kentucky, Tennessee, Alabama, Mississippi, Missouri, Arkansas, Louisiana, and Texas, one of the largest portions of the Union, and rapidly increasing. Its demands for railways are very great; yet, there has been less railway progress in these states, than in any other. The reasons are obvious. The immense territory occupied by these states is thinly inhabited, and except in small sections, has little surplus wealth. A great number of railways however, have been *begun*, especially in Tennessee, and Missouri, where the respective states have granted aid. Some of these roads are actively progressing; but if the commercial depression continues, it will take some years to finish them. The following is the present condition of railways in these states, viz:

1. OF KENTUCKY.—In Kentucky, there has been much more talk than work, in the way of railroads. This is principally owing to the fact, that this state, unlike Virginia, Missouri, Tennessee, S. Carolina, or Georgia, has granted no state aid to railways. And unlike the Northern States, has no such density of population, and manufacturing establishments, as will create capital and business for railways, without state aid. The state has been governed, in relation to its public improvements, by the "penny wise and pound foolish policy." The consequence is, Kentucky is the least progressive of all the western states. With a mineral wealth, which can scarcely be estimated; with a large body of fertile lands, and with a water navigation, and water power, beyond almost any state, it suffers these resources to waste for want of commercial enterprise, and is content to see other states surpass it on every side. Its railways are:—

	Complete.	In Progress.
Louisville and Lexington	97 miles	— miles.
Covington and Lexington	93 "	— "
Maysville and Lexington	—	47 "
Lexington and Big Sandy	—	120 "
Lexington and Danville	—	36 "
Louisville and Nashville	—	130 "
Maysville and Big Sandy	—	45 "
Nashville and Henderson	—	110 "
Louisville and Cincinnati	—	100 "
Danville Extension	—	79 "
Mobile and Ohio	—	104 "
Roads.....11	190 miles	641 miles.

There are many other roads in Kentucky *contemplated*; but we have put down only those, which seem to be undertaken with some probability of success.

The road from Paris to Lexington is included in the Covington and Lexington.

The *Lexington and Big Sandy* road is progressing.

On the *Lexington and Danville* road, the largest portion of the work is done.

The *Henderson* road is progressing very well.

The *Louisville and Nashville* line is reported to be in progress.

The *Mobile and Ohio* in Kentucky, has a very large portion of its work already done.

Kentucky needs and must have, four great lines, viz:

First, a line from Paris or Lexington to Knoxville, Tenn., so as to complete the *Great Central line*, connecting Covington at the Ohio river, with all the south, *via* Knoxville.

Secondly, the continuation of the line from Danville to McMinnville, Tenn., and thence through Alabama to Florida, and the Gulf of Mexico.

Thirdly, a city line from Covington to Louisville, Nashville, and Memphis.

Fourthly, a great East and West Line, from the Mississippi river through Lexington to the Big Sandy.

Parts of all these lines are made; but Kentucky is slow to move, and takes a generation to *complete* anything. She should *wake up*, and coin her iron, coal, salt, and soil into gold.

2. OF TENNESSEE.—Tennessee is the most various, and in some respects, the best state in the Union. She unites the north, the west, and the south all in herself, and has a climate which passes from Alpine snows to tropical heats; from oats and beans, to cotton and tobacco; from mountains of iron to alluvials of corn. This state, so great by nature, has begun to take a lively interest in her own welfare, and is moving ahead very rapidly. The copper mines rival those of Lake Superior; her corn competes with that of Ohio; and Memphis, with her cotton bales, begins to think herself the Metropolis of the Lower Mississippi.

Tennessee has recently granted state aid to the amount of $10,000 per mile for iron; and from $100,000 to $300,000 each per bridge over the rivers. Her credit is good, and this aid will probably enable her to complete all the railways which *ought* to be completed, in a reasonable time. Some twenty or more charters for railways have been granted, under which, the companies formed may claim the state aid. Some of these, we believe, are not yet undertaken. All, of which we have any knowledge, are comprehended in the following list:

	Complete.	In Progress.
Nashville and Chattanooga	151 miles	— miles.
Western and Atlantic	10 "	— "
East Tennessee and Georgia	67 "	29 "
Memphis and Charleston	63 "	43½ "
Shelbyville Branch	8 "	— "
Mobile and Ohio	— "	118½ "
Nashville and North-Western	— "	160 "
East Tennessee and Virginia	— "	125 "
Nashville and Henderson	— "	45 "
Blue Ridge	— "	125 "
Nashville and Louisville	— "	35 "
Nashville and Memphis	— "	225 "
McMinnville and	— "	25 "
Nashville and Cincinnati	— "	45 "
South-Western	— "	83 "
Winchester and Alabama	— "	35 "
Cumberland Gap, Cincinnati and Charleston	— "	60 "
Aggregate....17 roads	299 "	1,154 "

There are several roads in East Tennessee, as there are in Kentucky, aiming to make a connection between the South and Cincinnati; but we have put down but one in each state, as it is not probable more than one will be constructed to accomplish the same purpose. It will be seen, from the above list of railways, in Tennessee, that there are three great systems in view.

1. To connect Memphis on the South, with Charleston, S. C., or the East with Nashville and the railways that will centre there, and on the North with Louisville and Cincinnati.

2. To connect Nashville, *radiating* on every side, with Charleston, Memphis, the Mississippi river, in the direction of Missouri; with Louisville, with Cincinnati, and with Knoxville.

3. To connect Knoxville with Charleston, with the Virginia system, with Cincinnati, and with Georgia. There will be, in Tennessee, three great *centres* of railways, corresponding with the three natural divisions of the state.

Beside these, there is a North and South Line to he made through McMinnville, connecting Cincinnati with Pensacola, which will he equal in importance to any in the State.

3. Of Alabama.—The following are the lines finished or undertaken in this state, viz:

	Complete.	In Progress.
Montgomery and West Point	88 miles	— miles.
Alabama and Tennessee	56 "	140 "
Memphis and Charleston	43 "	105 "
Alabama and Florida	— "	116¾ "
Alabama and Mississippi	— "	120 "
Mobile and Ohio	62 "	— "
Aggregate....6 roads	249 "	494¾ "

The *Ohio and Mobile* Road, really the longest in the U. States on *one line*, now approaches completion, and although but a short distance in Alabama, is of immense importance to the city of Mobile.

The next great line will be the one which is to connect Pensacola with Cincinnati, and will run nearly through the centre of the state, in the general direction of the Alabama river, and striking near the great bend of the Tennessee.

4. Of Mississippi Railroads.—

	Complete.	In Progress.
Vicksburg and Jackson	46 miles	— miles.
Southern Mississippi	14 "	90 "
West Feliciana	26 "	— "
Raymond Branch	7 "	— "
Central	— "	186 "
New Orleans and Jackson	10 "	150 "
Mobile and Ohio	— "	253⅓ "
7 Roads	103 "	619⅓ "

The *Ohio and Mobile* has its greatest link in this state; skirting almost its entire western border.

The *New Orleans and Jackson* will connect New Orleans with the heart of this state.

The *Central* will run through the best cotton region of Mississippi.

The *Southern Mississippi* will run east and west, connecting the Mississippi river with the heart of Alabama.

5. Of Louisiana.—

	Complete.	In Progress.
Carrollton	6 miles	— miles.
Clinton and Port Hudson	24 "	— "
Ponchartrain	4 "	— "
New Orleans and Jackson	77 "	— "
New Orleans and Opelousas	— "	175 "
Mexican Gulf	27 "	— "
Roads 6	138 "	175 "

New Orleans relying too much on the Mississippi river for its commerce, has lost twenty years of growth, by not commencing soon enough a railroad system. She is now conscious of that fact; but must work hard and long to redeem the time.

6. Of Missouri.—

	Complete.	In Progress.
Hannibal and St. Joseph	— miles	202½ miles.
North Missouri	— "	228 "
Pacific (Kansas)	60 "	170 "
Pacific (South-West)	— "	280 "
Iron Mountain	— "	75 "
Aggregate.....Roads 5	60 "	895½ "

All these roads have received state aid, and will unquestionably be completed in reasonable time. In all probability, the Pacific Kansas route, will be one of the routes adopted for the great road from the Mississippi to the Pacific Ocean.

7. Of Arkansas.—

	Complete.	In Progress.
Cairo and Fulton	— miles	260 miles.
Arkansas	— "	150 "
Fort Smith and Little Rock	— "	153 "
Aggregate....Roads 2	"	410 "

Arkansas is in its infancy, as to railroads; but the above roads have a large amount of lands appropriated, as well as town and county subscriptions. There is no reason why they should not *go* on to completion.

8. Of Texas.—The state of Texas, owning the vacant lands in the state, has made most liberal grants to whoever will undertake the construction of railways there. There are more than twenty charters granted for different routes, giving from ten to twenty sections per mile. There are only three or four of these charters taken up, with the promise of success. They are as follows, viz:

	Complete.	In Progress.
Harrisburg and Brazos	— miles	73 miles.
Galveston and Red River	— "	67 "
Henderson and Burkville	— "	100 "
Pacific	— "	700 "
Aggregate....Roads 4	"	940 "

The grant to each of these roads, and numerous others, is eight sections (5120 acres) per mile. The grant to the Pacific Company is 20 sections per mile. This charter is claimed to be held by the Walker and King Company, who have commenced operations; but the legality of that contract is yet undetermined.

The following is the summary of railways in the south-west:—

	Roads.	Complete.	In Progress.
Kentucky	12	190 miles	641 miles.
Tennessee	17	299 "	1,164 "
Alabama	6	244 "	494¾ "
Mississippi	7	93 "	629⅓ "
Louisiana	6	61 "	248 "
Arkansas	2	— "	410 "
Missouri	5	60 "	895½ "
Texas	4	— "	940 "
Roads	59	952 "	5,423⅓ "

It will be seen, that in the south-west, the great body of railroads are yet to be completed. The Tennessee and Missouri are quite sure to be completed; being aided largely by the states and these states being in high credit, notwithstanding the financial difficulties of the times, the roads in the west and south-west will be completed, with very few exceptions, and will present a good result, of which the world has heretofore had no example.

Tennesseee Bond Cases.

We are glad to learn, that on the 25th of January, (ult.) the Supreme Court of Tennessee decided the Bond Cases in favor of the Railroad Companies. About a year since, the county of Davidson (in which is Nasbville) subscribed liberally to various railway companies, as did several other counties. In the mean time, the county commissioners of some of these counties raised the question of legality, which bad to be submitted to the Supreme Court. Our correspondent at Nashville, writing on the 25th ult., says:

"The Supreme Court has this day decided the Davidson and Sumner County Bond Cases in favor of the Railroad Companies. The Davidson County case involves a million of dollars, being the subscription of the county to the Nashville and Northwestern Railroad, of $300,000; Louisville and Nashville Railroad, of $300,000; Edgefield and Kentucky Railroad, $200,000; Tennessee and Alabama, $200,000. The Sumner county case is a subscription of $300,000 to the Louisville and Nashville Railroad."

This decision will, we presume, secure the success of the Northwestern, and the Louisville Roads. The credit of Tennessee is very high, and the State gives $10,000 per mile. The Northwestern Railroad will commence with $2,500,000 as a solid foundation.

DEVELOPMENTS OF THE TIMES.

Among the many curious developments which are going on in these anomalous times, we have heard of one which we cannot refrain from giving our readers. In a township of Ohio, along the line of the Cincinnati and Chicago Railroad, live two moderately wealthy families, whose possessions border on the road. A few years ago, when the proposition to take stock was submitted to the residents, it was strongly urged on both these to take what they could afford. Mr. R. took about $3,000 worth, but his neighbors could not be prevailed upon to take a dime's worth. No, they "wanted their money where it would pay them interest, they had worked too hard for it to run the risk of losing every copper." In vain it was represented to them that it was bread thrown on the waters, and that the road would improve their land at least as much as they would put in. It was all useless, they would have their money safe. And so they brought it to Cincinnati, and deposit-

ed it at the bank of P. B. Manchester, quite sure of every dollar. They were to get at first 6 per cent., then 8 and then 10.

Two years have passed away and Manchester has failed, and pays five cents on the dollar. The Cincinnati and Chicago road is also in difficulty for want of a little ready money, although it has still real estate; but that is not cash, and its stock is down to the lowest ebb, having sold as low as five cents on the dollar, but now selling at seven, with a prospect of being worth more as the times grow easier; while Manchester's Bank is gone past redemption. Our friend Mr. R., laughs over the misfortunes of his neighbor, and tells them his bank was the best, sand bank though they called it in the outset, and that he means to hold on to his deposit till it pays him up in full.

This little incident is not without its moral, which should be read and felt by every farmer in the land. The gentleman who took the stock and gave his influence and means to promote the best interests of his county, is now pecuniarily better off by 40 per cent., than the one whose selfish and short sighted policy could see nothing beyond the seeming interest of the moment. It is true, that the lands of both share alike in the increase of valuation; but the one has the conscious satisfaction of knowing that he is enjoying the advantage which his own efforts have brought about; while the other in addition to the chagrin which the penurious cannot help feeling at the loss of their treasures, has the mortification of knowing that his money helped to pay for some of the magnificent entertainments to which he was not even an invited guest; he has paid the fiddler, but has not had a chance to dance.

ILLINOIS CENTRAL RAILROAD.

"The multiplication of new obligations of this nature is nearly at an end. Some of the most important roads in the country, such as the Illinois Central, which can command money at any time, are approaching completion. The funds they require are nearly all subscribed."—*U. S. Economist.*

The *Economist* is, in the main, a very good paper; but we have rarely seen a number which did not, in some way, brag upon the *Illinois Central;* for which, we suppose, there are good reasons.

The *Illinois Central* has been built out of bonds which the government gave, in a weak hour, without counting the quantity, and which Congress has most inconsistently denied to other roads, more beneficial to the country. This was its good luck.

But, as to *dividends*, they are to be looked for yet, and will be looked for a long while. When the *Illinois Central* people get ready to report their *earnings*, we shall be able to make some judgment as to the worth of the stock. Till then, we shall think the market for it rather high.

FENCING THE ROAD.

The necessity of fences on the line of our railroads is so obvious, both as regards safety of life and property to the company, passenger and proprietor of the soil, that we need not discuss the matter here. Why, then, are many of our railroads left unprotected from the trespassing of animals along the whole length, or any portion of the line? Simply, because the expense of fencing is enormous, and, under present laws, an onerous burden on those who have no right to bear it. Here we are aware that we are met with the answer, that such is the law, and it is therefore right. Well, what of the law? Does any one suppose that the law as well as the Pope is infallible. Let such a one live under the "good old Blue Laws of Connecticut," and if he does not cry, "hold, enough," before his first month of probation is over, it will be because he has a greater reverence for *law* than we believe a person of the present age capable of feeling. The truth is, the law is a mere expression of the people's will if they make it, or of the will of their rulers, if they have not the power to make it for themselves, and as such, may be biased by prejudice, ignorance, or fanaticism. Law in its very nature, is progressive, just as society is progressive; and no government under heaven ever did or could abide forever by a single unaltered code. It is then, clearly proper to discuss the justice and propriety of compelling a railroad to do that which an individual can escape, and on this point we decidedly incline to the opinion that a railroad should not be compelled to fence its own line.

We are aware that this is new doctrine to the many; so is the fact new that a county can well afford to build a line of road through its limits, if that will insure an easy access to its markets; yet such is the fact, proved by experience in innumerable instances, and so proved that it is beginning to be acted on extensively in the intelligent portions of the country. It was formerly thought, and that, too, universally, that a farmer who allowed a railroad to purchase of him at immense cost, a right of way through his farm, was conferring a great benefit on the company for which they ought to be forever grateful, and should cheerfully pay whatever extravagant claim he chose to make. Indeed it was a *privilege* for the company to make the road, not a privilege to the farmer to get it. Such was the feeling, and under that feeling laws were passed compelling the companies to fence their whole line. But we are glad to say that these narrow views are passing away, public opinion *is* changing, the farmer *is* frequently found *giving* the right of way. Then railroads were weak—they dare not contend for what was obviously just and reasonable; they had Hobson's choice, and must take what they could get. Now the tables are turned; the few "*brainless enthusiasts*" of the former age, have proved to the wise-acres who lamented their folly that the railroad is a practical benefit to the farmer and not an injury. The calculation has been reduced to dollars and cents, and too often *proved*, to be mistaken.

Railroads, then, so far from being an injury to the farmer for which they should pay him dearly, are his best friends; they make his farm and produce worth double what they would have been worth if he had only had the mud road and his team; why, then, should legislators treat them as his enemies? why continue a system of laws which were adapted to a public opinion long since proved erroneous and prejudiced?

But, to return to the law, what says the code on the subject of fines? To begin with county roads. The code provides a suitable means for opening the same; assessing the value of land taken for the purpose; making the road and keeping it in repair; but not one word about fences. It obviously gives the farmer his choice to fence or not, just as he deems it most to his interest. The fence is designed to protect his property, and if he chooses he may build for that puppose whatever structure he deems proper. But, it will be answered that railroads are not open to the free travel of the residents, and therefore the principle of legislation applied to the turnpike is not applicable to them. Neither is the corporate turnpike open to the free travel of those who choose to ride upon it. The turnpike collects its toll for the use of the road bed; and the railroad for the use of road, cars and motive power.

But to waive this point, without, however, conceding it, suppose that the railroad company is to be considered as a private association, designed only for the benefit of its members, and that it purchases of the land owner the track for its own purposes, what says the statute on this subject?

Be it enacted, etc., That whenever a fence, of whatever materials constructed, and in all respects such as a good husbandman ought to keep, shall hereafter be erected by any person on the line of his land, or that on which he may have a lease for one or more years, and the person owning the land adjoining thereto, or holding a lease on the same for one or more years, shall make, or cause to be made, an inclosure on the opposite side of such fence, so that such fence may answer the purpose of inclosing his field, meadow, lot, or any other inclosure, such person shall pay the owner of such fence already erected, one-half of the value of so much thereof as serves as a partition fence, to be adjudged by the fence viewers of the township in which such fence may be situated; and the amount so adjudged, if not paid, may be recovered in an action of debt before any court having competent jurisdiction, in the name of, and for the use of the owner of such fence, with costs of suit.—*Curwen's Laws of Ohio in force, page* 495.

The whole subject, then, is in a nut-shell.

If the railroad is a public accommodation, of as much value as the turnpike and ordinary mud road, it should not be taxed with any more onerous or partial burden than the turnpiko or county road. If on the contrary the railroad is only to be regarded as private property, to be used for the advantage of its owners, it should only be subjected to the restrictions imposed on private property. In either case a material change is necessary in the law of fencing. This question once settled, we see no particular necessity for especial legislation, but a direct injustice in the special and partial laws now in force.

THE ECONOMIST—OHIO.

"Michigan and Illinois have developed an equal productive power, and have enjoyed proportionate prosperity; but Indiana and Ohio, which have been overrun with small notes, have found that false money suddenly withdraws, leaving them without a market for produce, at a time when money is dearer than anything else."—*U. S. Economist.*

It is quite remarkable, that a respectable journal, and especially one dealing in statistics, should put forth such a statement as this. What authority has the *Economist* for saying, that Ohio is "without a market for produce?" There was never a day in which wheat, flour, pork, beef, or any article of produce did not command cash, at fair prices, in 1850, in any of the principal ports of Ohio; and the *Economist*, of all papers, *should* know that the exports of Ohio, in that very year, are more than those of Illinois, Michigan, and Wisconsin put together. Further more, the *Economist* knows that the free Bank paper was issued in Illinois, as fast as they could put it out, and that in the Cincinnati Market it is so depreciated, that it is entirely uncurrent. One who, in the face souud of the currency of Ohio, can put forth a statement like the above, should be sat upon by an inquest *de lunatico inquirendo.*

GRISWOLD'S RAILROAD ENGINEER'S POCKET COMPANION FOR THE FIELD.—This little book is put up in neat and convenient form for pocket use, and comprises rules for calculating deflection distances and angles; tangential distances and angles, and necessary tables for engineers. There is also a short and practical treatise on the art of levelling and calculation of earth, taken from borrowing pits.

In his preface the author says: "In offering this work to the patronage of the Assistant Engineer, I would wish to remark, that the book is composed of notes that I have long been collecting. Every engineer has his private book of rules that, should he want for memory in the field, he has only to refer to his book. This book I have intended for the same object."

We commend the work to the attention of our engineer friends. Published and for sale, by Miller, Orton & Mulligan, Buffalo, N. Y.

Railroads.

PITTSBURG AND STEUBENVILLE R. R.

The reports of Robert Woods, Esq., President of this road, and of D. Mitchell, Jr., the chief Engineer, were made to the Company, on Jan. 8th. The president says, "through the first part of the year, the work progressed steadily on the road from Cork's Run, two miles from this city, to the river at Steubenville. That part of the line through Virginia was finished by Wells and Edington, and the construction cars with one passenger car, have been running on it regularly the last summer and fall, for the convenience of the road, and the accomodation of local travel.

"Last spring the city of Pittsburgh made an additional subscription to your stock of $300,000, and the county of Allegheny a like subscription of $200,000, thus securing to the Company a sufficient basis beyond all peradventure to complete the road; at once your Directors took prompt measures to urge on the whole line, placing under contract the portion from Cork's Run to the south end of the Monongahela Bridge—largely increasing the force on all the unfinished sections, and advancing the road during the year more than $400,000.

"There is also coming to your Company $100,000 from the Chartiers Valley Railroad Compauy, at such time as it may suit said Company to pay the same, not later than May 1st, 1855, on a contract made between said companies, for the purpose of using your road to the junction for the accomodation of both companies."

The report then proceeds to notice the fact, that owing to the stringency in the money market and the large number of other securities offering under the most urgent circumstances, the bonds of this Company had been withheld from the market. The president then says: "Owing to these causes we could not do all that was desired, without a ruinous sacrifice; yet we have left so little of our work undone, that with energy, the assets and credit of your company will enable you to complete the road by the early part of summer — and this, though the times should continue hard.

"No contract for iron has been made, except for so much as has been used, so that the fall in the price of that item alone — being now but little above one-half its former price —will be a saving to the company of more than they have or can lose by the depreciation in corporation bonds, or extra interest."

On the 1st of September, the company entered into a contract with the Pennsylvania Railroad Co., to run with that road through lines in continuity or close connection with each other, to fix a uniform width of guage, and to establish uniform rates of freight and travel.

The Steubenville and Indiana Company had also agreed to continue the same guage on their line, and to run freight and passenger trains in connection with the above roads. The guage adopted is four feet eight and a half inches.

From the engineer's report we extract the following table. The total estimated value of work done upon your road up to this date is as follows, viz:

Grading and Masonry in Pennsylvania	$535,507 94
" " " and laying track in Virginia, by Edington and Wells	115,577 84
Iron ties, timber, bridging, engine and cars.	100,000 00
Engineering, superintendence and incidents.	37,519 00
Total done	$788,604 78

"The present estimated cost of completing the work from river to river under present contracts is as follows, viz:

Grading and Masonry	$280,833 00
Bridge Superstructure	25,000 00
Arching Tunnels	45,500 00
Cross Ties	30,000 00
Ballasting	28,800 00
Iron and laying	245,000 00
Total to complete	$665,133 00

"From the above statemet it will be seen that the entire cost of the work when completed will be $1,453,737,78, or about $150,000 more than the original estimate submitted upon its location. This difference is readily accounted for by the fact that all the bridge masonry was required by a resolution of the Board to be built for a double track road, and over three miles of this line, in detached portions, have also been graded for a second track. The arching of the tunnels not contemplated in the original estimate has been provided for in this—as also the fact that a large amount of the cost of the work is payable in the stock of the company at par, which may be chiefly regarded as profit to the contractors. These items deducted at a fair value, and it will be found that the cash cost of the work first contemplated is under, rather than over, the original estimate.

"That part of the road in Virginia built by Edington and Wells, seven miles in length, was opened on the 4th day of July last, and has been in use since that time for transporting materials for the work in Pennsylvania, adjacent to the State line to the head of Harmon's Creek, near Burgetstown, will only require an expenditure of about $12,000 in addition to what has already been done. From that point to Mansfield, within seven miles of Pittsburgh, the grading may be completed for abont $122,000. The balance of the $280,833, required to complete the whole of the grading being required on the seven miles next Pittsburgh, where the heaviest work to be done occurs."

The work has been suspended since the 1st of December for want of funds to carry it on. On the 20th of November notice was given to the contractors, that the Company would be unable to proceed, unless the con-

tractors would take the bonds of the Company in payment. This they were unable to do, and work was suspended.

"Since that time, however, arrangements have been made with several of those on the heaviest jobs to proceed with their works on the terms proposed, and it has been recommenced, and is now steadily progressing on the heaviest sections."

TERREHAUTE AND RICHMOND RAILROAD ANNUAL REPORT.

The account of the stewardship rendered, by the managers of this road, is such as should be most satisfactory to the stockholders, and to all others interested in its welfare. We shall give the results of this report, by comparing it with the previous ones, which we have. The following is an account for three successive years, ending with the 31st December, viz:

	Receipts.	Expenses.
In 1852	$105,943	$34,497
" 1853	177,975	66,331
" 1854	239,992	80,669
Three years	$523,910	$181,497
Nett Receipts		$342,413
Actual cost of Road		1,465,321
Nett Receipts in 1854		159,323

It appears that the aggregate receipts and the *nett* receipts have *doubled in three years*; and that the nett receipts are now 10½ per cent. The consequence is, that the Bonds of the road are now being converted into Stock; so that the debt of the Company will soon be wiped out.

The Company has paid its interest punctually, and made *five* dividends, amounting in all to 22 per cent. on the stock, which averages 7 per cent. for the three years. The last dividend was 10 per cent. in cash. When the Terrehaute and Alton road is completed, probably the stock of this road will be among the very best in the country. There is no doubt, that if, as now, the road is prudently managed, it can pay 10 per cent. forever.

N. E. and S. W. Alabama Railroad.

We have looked with interest at the progress of this road as one of the class of roads which will place Cincinnati in communication with Mobile and New Orleans, and, as such, of great importance, in a commercial point of view, an importance which we can not appreciate until the chain is completed, and we have the interior of the States which it traverses, opened and improved. We take the following from the Chattanooga Advertiser, of January 20:

THE MEETING OF THE STOCKHOLDERS AT EUTAW.—We have been furnished by a friend with the following facts in connection with the late meeting of the Stockholders of the N. E. and S. W. Alabama Railroad at Eutaw. At the annual meeting of the stockholders of the above Company, held at Eutaw, Alabama, on the 3d instant, the old Board of Directory, with the exception of W. W. Shearer, Esq., resigned, were elected as follows:

James Hair and Robert Houston, of Sumter county; Sol. McAlpine, Fred. Merriweather, Alfred Clement, J. I. Thornton, and S. L. Cresswell, of Greene county; J. H. Deering, A. B. Deering, Alfred Battle, and R. H. Clements, of Tuscaloosa co.

And the following officers were elected for the ensuing year: L. C. Garland, President; E. D. Sanford, Chief Engineer; Wm. Foster, Secretary and Book Keeper.

A call of 5 per cent. has been made upon the subscription to defray the expenses of a permanent location of the road and what contingencies may arise for the coming year. This will yield a sum of about $35,000 sufficient for active operations. While the location is going forward it is desirable to increase the cash subscription to $1,000,000, so that every emergency may be fully provided for and the company be subjected to no inconvenience or delay.

The Board have authorized the employment of a full corps of Engineers, and the entire road, from the M. and O. Railroad to the Chattanooga, is to be located and prepared for letting at the earliest time practicable. The prospects are indeed cheering; the entire grading and $600,000 in cash is subscribed, and the remaining amount needed for bridging, masonry, and general management, will doubtless be subscribed during the interval occupied in preparing the road for the contractors.

The policy of the Board is to place the speedy completion of the road beyond a doubt before actually commencing the work, but at the same time to provide amply for its speedy preparation for letting, and thus, to lose no time in the final completion of the road.

INTERNAL IMPROVEMENTS IN FLORIDA.

The Board of Internal Improvement of Florida has recently recommended to the General Assembly a grand system of internal improvements, much needed in the garden State. The Board is composed of David L. Yulee, James T. Archer, Richard H. Long, A. S. Baldwin, and John C. Pelot.

The first work proposed is a road from Pensacola to Jacksonville, 320 miles in length, with branches to St. Andrew's Bay, and St. Marks, on Apalachee Bay. This line extends nearly the length of the State from east to west, and crosses the bed of all the principle streams, which flow from Alabama and Georgia through Florida to the gulf. It would, therefore, transport either to Jacksonville on the Atlantic, or Pensacola on the Gulf, all the surplus products of its own region and the vallies of these streams.

The second proposal is, to connect by railroad Amelia Island on the north-east, with Tampa Bay, on the south-west with a branch road to Cedar Key in East Florida. This improvement is principally of importance to develop the central portions of the State, and would amply compensate for its construction. The Board also propose a canal to connect Indian river with the St. John's.

When these two grand trunk lines shall have been completed with the necessary branches, Florida will have great advantages for commercial and agricultural development.

We learn by the *Floridian and Journal*, that the bill submitted by the Board, passed the House on the 29th of December, by a vote of 30 to 5. It went to the Senate on the 30th, where it will be acted upon at once. In the opinion of the Journal it will become a law.

ANNUAL REPORT OF THE SIXTH-AVENUE N. Y. CITY RAILROAD COMPANY.

The Annual Report of the Sixth-Avenue Railroad Company for the year 1854, shows that during that period the track of the road has been extended on the Sixth-Avenue to and through Forty-four street, thence through the Company's property to Forty-third street, and through Forty-third street to the Avenue, with a single, double and tripple track. This expenditure, it is stated, was unavoidable, inasmuch as the City authorities had forbidden the Company longer encumbering the street with their cars.

The mortgage indebtedness of the Company is unmatured mortgages on the real estate of the Company, amounting to $12,700. The mortgages receivable amount to $7,920, leaving the mortgage debt reduced to $4,680. To effect this balance, the Company held surplus lots yet unsold, which cost $7,200. The expenditures on capital stock account, now amount to $776,226 50. This sum is represented by $750 000 capital paid in, by $4,780 balance mortgages, and by $21,486 50 borrowed from the earnings fund. The report further says, that during the past year the receipts from passengers have amounted to $223,600 39. The expenses were $188,463 73. Net profit, $35,226 66. As the fiscal year does not close until 1st February, the estimated profits of January, $3,000, and balance on hand at the beginning of the year, $3,412 25, may be added, to show the amount applicable to the next dividend, say $41,639 01, less the dividend, $26,250, paid in August. Could this Company have charged omnibus fare, 6 1-4 cents, the net profits of the year would have been more than doubled. The total receipts from travel amounted, in 1853, to $264,832 36—being $41,141 97 more than 1854. During the past year the business of the road has, therefore, been much smaller than the previous year. The receipts for the year 1853 were largely swelled by the adventitious circumstance of the Crystal Palace attraction, which drew crowds who would not otherwise have traveled over the road.

In regard to motive power, the report states that the substitution of mules, as a less expensive power than horses, was tried, and as far as it has yet been possible to effect the change of force from horses to mules, the experiment justifies all that was hoped from it. At this time, the change of power has been so far effected as to have reduced the number of horses from 590 to 208; a reduction of 182 head of horses—in whose place 131 mules are doing their work, saving the feeding of 51 head. The amount of food consumed by mules is found to be much less per head, than that consumed by horses.

The company complain of the hard times, and enter in a detailed statement of several channels, viz: motive power, abolishment of the free list, reduction of salaries, substitution of single cars, etc., through which a large diminution in the cost of working the road may be made.

Among the proposed savings for 1855, we

notice the entire abolition of free tickets and the whole race of dead heads.

In 1854 there were carried on the road:

Paying passengers	4,473,803	
Free passengers	176,153	
Total	4,649,961	
Amount of fares collected		$223,990 39
During the present year the Company estimate to carry, Paying passengers	4,649,951	
Free passengers		
Total	4,649,951	
Amount of Fares		$236,398 05
Difference in receipts		$ 8,807 06
Deduct 25 per cent. for rides not taken when to be paid for		2,201 91
Anticipated saving		$ 6,605 75

Miscellaneous.

From the New Orleans Delta.

COAL FIELDS OF ARKANSAS AND NEW ORLEANS.

There are rich and extensive coal fields, of the finest coal—both bituminous and anthracite—much nearer New Orleans than those of Kentucky—in fact, almost or quite as near again, and which can be made far more accessible. These fields seem to be very little known—in fact, scarcely any; and I wish, through the medium of your paper, to call the public attention to them. When at Little Rock, some two years since, I saw specimens of the coal, and can bear testimony to its existence and value.

These fields, as discovered, begin about forty miles above Little Rock, near or at the Arkansas river, as I was informed, somewhere about Johnson county; and, in *that part* of Arkansas, extend over some counties and fractions of counties. But these discoveries I take to be only a portion of the great coal-field of Arkansas, and perhaps only a small portion—the northern and north-western rim or side of the coal-basin.

Again, I see from the papers recently that rich and extensive mines of fine coal have been discovered about and not far from Camden, in the southern and south-eastern part of Arkansas; and when in that county—in Union county—about two years since, I was informed, on reliable authority, that mines of coal had been found below Camden, and, perhaps, in Union. This is the lower side or rim of the basin.

From these facts and data, we can see somewhat the shape, extent, and direction of this great coal-field; that it begins above Little Rock, where the discoveries have been made of which I have spoken—then makes a deep dip south and south-east, under the Little Rock and Hot Spring regions and the country between—and then appears again, or "crops out" above Camden, where the late discoveries have been made. This I judge to be the shape and extent of the basin. And I think it very probable that, at a great depth below Little Rock—perhaps two hundred feet or more—there are rich beds of coal, and which the sinking of a shaft would show. The character of the country about Little Rock and Hot Springs indicates the existence of coal, I think, below the surface of the country. From the former to the latter place, it is of a slaty character nearly all the way. The slate is everywhere "cropping out" in the hill-sides and slopes, and to be seen on the bottoms of the streams; and at Little Rock is an extensive quarry of as fine slate as ever I saw anywhere—and which is said to extend some forty or fifty miles in a south-westerly direction. It is, no doubt, this which I crossed on my way from that place to the Hot Springs.

Now, this is the coal-field from which New Orleans must ultimately draw her supplies, as well as Memphis, and the intermediate places on the Mississippi. And all that is necessary is for Arkansas to build the roads, projected in her, to the Mississippi river, have branches to these mines, and mine the coal and send it to market.

In fact, coal could now be mined above Little Rock, in the coal regions there, and taken down the Arkansas river to New Orleans, (as easily as down the Ohio,) and made a profitable business; and also from the mines above Camden, and taken down the Ouachita river.

I think that I am warranted in these views of the Arkansas coal basin, from analogy. North of the Ohio, in Indiana or Ohio, are coal-fields; and then, again, in north-western Kentucky. It was supposed the coal dipped under the Ohio at Evansville. A shaft was sunk, and, at upwards of 200 feet, coal was found. Such is the result of geological observations.

Yours respectfully, JNO. R. HOWARD.
Paducah, Ky., Dec., 1854.

A New Crane.

In the last number of the *Proceedings* of the Birmingham Institution of Mechanical Engineers, a very interesting paper appeared, which was read by Mr. William Fairbairn, of Manchester, before that Society—descriptive of a newly-invented steam traveling crane, the construction of Messrs. Dunn, Hatterslay & Co., of that city. The economy of manual labor in working traveling cranes has long been a matter of great importance to the builder and contractor for heavy works, and steam-power has been for some time employed for the lifting and removal of heavy weights by a steam traveling crane. Although the amount of saving in wages thus effected by machinery, compared with the ordinary hand-labor machine, has been sufficiently proved during the last four years, it was found that longitudinal shafts or bearings, where a fixed engine was employed, were very expensive. The great length of the longitudinal travel in the remarkably extensive works for the viaducts and bridge of the Grand Trunk Railway, of Canada, and the lubrication and friction of the longitudinal shafting, rendered it peculiarly so; the saving of those shafts and bearings was not the only consideration—the wear, tear, and lubrication being a further source of expense, and the repairs were found to be very inconvenient.

The advantages proposed by the new crane were, that the steam power travels with the traversing carriage, and does not require any longitudiual shafts or bearings, the machine closely resembling the general appearance of the ordinary traveling cranes commonly used by masons and contractors. The longitudinal way, transverse carriage and crab, are arranged in the ordinary manner; while the steam engine and boiler, with the driving gear, are supported on a platform at one extremity of the transverse carriage, being fixed to it, and traveling with it in a longitudinal direction wherever so required. The steam traveling crane which formed the subject of the paper was designed for the contractors, Messrs. Peto, Brassey, and Betts, and intended to be employed in the construction of the works of that railway, and is, in effect, a new application of the portable steam-engine. A pair of small direct acting horizontal high pressure steam-engines are secured to the main timbers of the traversing carriage, the boiler being constructed for burning wood, the cheapest and most abundant Canadian fuel; the tubes are made of solid copper, without seam or joint, so that the acid from the wood should not corrode them. The engine and boiler, with the driving gear, are protected from the weather by a cabin, constructed of light frame work, and covered with a corrugated iron roof, so as to render the machinery complete.

The power of the engine is transmitted by a spur-pinion upon the middle of the crank-shaft, through a spur-wheel, placed on the horizontal main driving shaft, which communicates the motion for hoisting, traversing, or moving the crane longitudinally, and every motion can be used independently of either of the others, or simultaneously if required. The communication of the power to the different motions is effected by three sets of mitre-wheels, upon the main shaft, which are engaged or disengaged at pleasure, by means of three handles that move the sliding clutch-boxes, as required by the attendant; three mitre-wheels being furnished to each motion, so that, whilst the engine revolves continually in one direction, the reversing of any motion can be effected by the intermediate wheels, as in the ordinary manner. The motion for moving the carriage longitudinally is conveyed through the wheels at the extremity of the driving shaft furthest from the boiler, the arrangement for moving the crane longitudinally, by means of spur-gear, driving the traveling wheels, being similar to the plan adapted to a hand traveling crane, while the traveling wheels run upon rails, which are fixed at a guage centre to centre. The hoisting and lowering motion is transmitted to the chain barrel of the crab by means of an endless chain, which is placed in the longitudinal direction of the traversing carriage, and is driven by a pulley upon a counter shaft parallel to the main one, the motion being communicated by a pair of mitre-wheels through the short intermediate shaft at right angles. This endless chain is also connected with a pair of mitre-wheels fixed at the lower end of the crab-carriage, which give motion to a worm-wheel, the latter being keyed upon the chain-barrel.

The transverse motion of the crab is obtained by another chain, placed in a parallel position on the opposite side of the main timbers of the traverse carriage; this chain is attached to the four-wheeled crab, and passes over a pulley on the axis of the worm-wheel, which is driven by the level gear, while an additional handle is provided for the purpose of throwing out of gear the chain of the hoisting motion, by means of a clutch-box, at the time of the transverse motion of the crab, and the chain then runs with the crab. A simple apparatus for adjusting the requisite tension of these chains is provided at the furthest extremity of the two main timbers of the traversing carriage, at the opposite end of the engine, consisting of a tightening pulley, slidiug in grooves, and drawn back by a screw. The engines are six-horse power, collectively; the crane is constructed to lift at the rate of six feet per minute, while the longitudinal motion works at the rate of 30 feet per minute, and the transverse motion at the rate of 20 feet per minute. The motions can be worked all together or separately, as desired, and the clutch-box levers are so arranged that the man in attendance can work all the motions from one place.

Monetary and Commercial.

Since our last, the money market has not exhibited any very striking feature. A general quiet and settled tone seems to pervade business circles, not interrupted by any unusual disposition to force operations. The river is filled with floating ice, and navigation is to a great extent impeded. Hence shippers are not busy Confidence is gradually returning, and there is every prospect of a decided improvement.

There is but little doing in discount business, although we may remark a slight increase over previous reports. We quote rates for first class paper from 10 to 12 per cent., other varieties varying from 15 to 36 per cent., according to the necessities of the borrower, though there is not much doing at the latter rates.

Gold is in moderate supply at 1 per cent premium. Eastern exchange is buying at ⅛ per cent. and selling at 1 per cent. Exchange on New Orleans is scarce, with an increased demand, and commands a premium of ⅜ to 1 per cent, selling rate. The activity in this particular, is probably due to the purchases of sugar and other southern products.

The stock market exhibits already decided marks of returning confidence. Transactions are made with greater freedom, and there is, on the whole, a decided improvement observable.

Our advices from the east notice continued ease in monetary affairs, with a disposition to increase business operations. The last steamer from California brought $1,270 000 to New York. The banks show an increase in specie, loans and deposits.

Orders are going out to Europe for Spring importations, and the increase of imports is already manifesting itself in the renewed shipments of small quantities of gold; the last steamer took out $75,000.

Stocks are more active, and large sales are made at improved prices.

JAMES HARDMAN, *Auditor.*

The Albany Lumber Market.

The lumber business for the year 1854 has presented some peculiar features. The receipts show a large decrease on those of the previous season, amounting to 82,154,922 feet of boards and scantling. Heretofore they have shown a large increase in each succeeding year, as will be seen by our table of receipts given below. The falling off this year was caused mostly by want of snow last winter for logging, and partly by the diversion of Canada lumber to Quebec, (where, in consequence of increased foreign shipments, the market, in the early part of the season was better than ours,) and to Chicago of a larger proportion of Michigan pine. This was anticipated by the trade, and we last spring estimated the falling off in receipts at 1,000,000 feet. Another marked feature is, that prices, notwithstanding the money pressure and consequent stagnation in business, have ruled higher than in 1853—commencing at an advance of full 5 per cent. and closing at about the same figures as that year. This was partially caused by the diminished receipts, but more by the enlargement of the area of sales, in consequence of the supply from Maine being largely cut off by the extreme and lasting drought there experienced. This opened up a market for Albany lumber in Eastern ports, the West Indies, and South America, heretofore mostly monopolized by Bangor, Calais, St. Johns, etc. Had the usual quantity been manufactured West, and East, prices would have gone down below the cost of pro-

duction, but the decreased supply has enabled manufacturers to realize remunerative rates.

The receipts of Albany for the last five years, as reported by the Canal Department, are as follows :

	Boards and Scantling, ft.	Shinglos, M.	Timber. a. ft.	Staves. lbs.
1850	316,791,538	31,226	28,832	150,515,280
1851	260,238,063	34,130	110,200	115,087,290
1852	317,135,620	31,636	291,714	106,961,289
1853	393,726,673	27,587	19,916	128,666,750
1854	311,571,151	24,003	28,909	135,895,661

The estimated value of the receipts of 1854 is $6,200,000.

The quantity left in market to be wintered is large, though not well assorted. It is estimated at 50,000,000 feet, consisting principally of tally boards and plank with but small proportions of box pine, spruce, or hard woods, and scarcely any clear pine or hemlock. Of staves the quantity now in market is much greater than usual. The prices have been high, exceeding those of '53, 10 per cent.; but the heavy stock now on hand, both here and in New York, with the small demand for export, renders it probable that prices will fall off the coming season, unless the quantity coming to market should be much diminished. It must be recollected that the demand for staves comes, in a large degree, from the grape-growing countries ; this crop in France and Italy was largely cut off by disease, and they will consequently consume a much less amount of our staves for the ensuing year. The prospect for sawed lumber is also far from flattering. From present appearances there will be no lack of snow for lumbering purposes, so that the quantity manufactured will probably be large. The Eastern mills will also probably be enabled to saw about their usual quantity, and if so, nothing can keep up prices or afford an adequate market but ease in money affairs and a revival of business. At present, the trade in the retail yards, supplied from our market, is small, and although their stock on hand is less than usual, it is much in excess of the quantity wanted for consumption.

A few words as to the relative lumber business of Albany and other places. We have heretofore said that her position at the termination of the canals, where a general assortment of the different kinds of lumber first meet each other, at the head of navigation, on a river which affords the means of transit for the vessels that freight lumber to the different Atlantic ports, the large capital engaged in the trade, and the unrivalled facilities here provided for storage and transhipment, would ensure her continuing to be, what she now is, the largest lumber market in the world. We find a spirited rival springing up, however, in Chicago, whose papers claim a superiority.

A comparison of the receipts of lumber for the last five years, will exhibit what grounds there are for the assumption :

	Albany.	Chicago.
1850	316,791,890 feet.	100,361,797 feet.
1851	260,238,063 "	125,0 6,187 "
1852	317,135,620 "	117,816,232 "
1853	393,726,673 "	191,271,274 "
1854	311,571,151 "	230,000,000 "

Our receipts for the last year were diminished by transient causes, which will not effect the steady growth of the trade. We must besides recollect that here the reported quantities are accurately ascertained by Canal Inspectors, and on which tolls are accurately paid to the State ; whereas those of Chicago, being only the figures given by each dealer, of his business for the year, may be grossly exaggerated, and the amounts duplicated, in many instances, by sales to each other. In staves we have no accounts from there except as to the receipts of 1854. These are stated at 110,293 pieces, whereas those of Albany are 134, 805,091 pounds, equal to 15,750,000 pieces. We have no wish to detract from the lumber business of Chicago, which is great and growing, but only desire that its relative position with our own may be truly shown and stated.—*Eve. Jour.*

Business and Growth of Carlinville.

We find in the St. Louis *Republican*, a statement of the business of Carlinville, during the past year. It appears that the exports of that place, for 1854, amount to about 100,000 bushels of wheat, 100,000 bushels of corn, 50,000 bushels oats, 7,000 to 10,000 hogs, 800 to 1,000 tons of hay.

The most of these articles were shipped to St. Louis and to Alton, some little to Chicago, but not much. About 4,000 barrels flour, shipped from Carlinville, 600 barrels of which were shipped to Chicago, and the balance to St. Louis.

During the year, there has been manufactured in the county not less than 20,000 barrels of flour, but the greater proportion for home consumption.

The present population of Carlinville is 1,100. Increase, since 1851, about 650. Present population of the county is supposed to be not less than 18,000. Increase since 1851, 6,000. In Carlinville there are 10 dry-good stores, 2 drug stores, 2 family grocery stores, two tailor shops, one tinware establishment, 2 saddle and harness makers, 3 wagon makers, 3 blacksmiths, 1 gunsmith, 1 cabinet warehouse, 1 clock and watchmaker, doing a business of about $250,000 a year.

During last year, 70 or more buildings have been erected in Carlinville, among which is a brick jail, and at present there is being constructed a very fine brick church for the Methodist denomination.

North Western Railroad. — The election for President and Directors of the North Western Railroad, held at Butler on the 8th inst., resulted in the choice of the following gentlemen, to serve for the ensuing year.

President—Samuel M. Lane, of Butler.

Directors—C. C. Sullivan, John N. Purviance, S. A. Purviance, John Graham, of Butler ; D. Sankey, R. W. Cunningham, A. L. Crawford, of Lawrence ; Wm. Mahew, Dr. John M'Farland, Indiana ; C. B. Lane, John M'Candless, J. L. Reed, of Philadelphia.

George V. Bacon, Esq., Treasurer of the Pennsylvania Railroad Company, fell dead on Tuesday evening, at his residence in north Eleventh street, after partaking of his supper. Mr. Bacon had been complaining for some days, but he seemed better during the day. This sudden visitation is attributed to gout in the heart. He was a well known citizen, and enjoyed a large share of public confidence.—*Phil. Sun.*

Champlain and St. Lawrence R. R.— The annual meeting of the stockholders in this Company, was held on Monday last, when the following gentlemen were elected directors for the ensuing year : R. Anderson, Esq., B. Brewster, Esq., W. Dow, Esq., Hon. John Molson, W. Molson. Esq., C. S. Pierce, Esq., John Rose, Esq., Johnston Thompson, Esq., Wm. Workman, Esq.—*Mont. Pilot.*

North Carolina State Bonds. — The Treasurer of the State of North Carolina has given notice that proposals will be received at his office until the 31st of January for the purchase of three hundred and seventy thousand dollars in bonds, bearing six per cent. and running thirty years. These bonds are issued by the North Carolina Railroad ; and in addition to the faith of the State all the stock held by the State in the road, and the dividends arising therefrom, are pledged for the redemption of the bonds. Proposals will also be received for the purchase of eight thousand dollars in bonds running ten years, for the construction of the Weldon and Gaston Railroad and the improvement of the navigation of the Neuse and Tar rivers.—*Balt. American.*

FALLS OF THE OHIO—WRECK.

One of the most singular occurrences we know of, happened in the recent snap of cold. It was the wreck of a ferry boat on the Falls of the Ohio. The boat from Jeffersonville to Louisville got entangled in ice and was drifted on to the rocks of the Falls, where the ice accumulated around her, so that for a few minutes, the loss of all on board seemed inevitable. Happily, they escaped. We know of no instance of so dangerous a wreck in comparatively so safe a place.

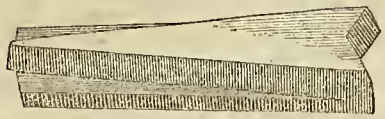
NOTICE TO CONTRACTORS.

Nashville & North-Western R. R.

PROPOSALS will be received at the Office of the Nashville and North-Western Railroad Company, for the Graduation and Masonry of said road, in sections of twenty or thirty miles.



The Company reserve the right to reject all the proposals, if none are satisfactory.

The length of the road is one hundred and sixty miles, and proposals are invited from contractors of ability for the entire work, including track, stating what amount of bonds, stock and cash will be received in payment.

Any information required, can be received by application to N. MACNEALE, *Chief Engineer.*

Nashville, Tenn., 25 Jan., 1855. fehtolmy

Important to Railroad Companies, etc.

Leavitt's Railroad Frog-Points, Cast Steel Tools, etc.

THE undersigned, having discovered that cast steel, in a liquid state, can be moulded into any shape or form, are, by means of this valuable discovery, manufacturing

RAILROAD FROG-POINTS,

Lathe Mandrels, Guages

of every description for blacksmiths use; Steps for Mill Spindles and Shafting, Sledge Hammers, and almost all the different variety of tools which are difficult to forge. Articles made in this manner, are much superior to forged productions, as the steel out of which they are manufactured, loses none of the carbonic element, but retains it in all its original purity, while under the repeated heats to which it is subjected by the old and tedious process, it loses much of this valuable property. They are also produced in a much more perfect state, needing little or no fitting or dressing, having all the accuracy of shape which moulded articles possess. They can, also, be furnished at one-half the cost of the others.

The qualities of the Frog points have been already tested by the Ohio and Mississippi Railroad Company, to whom the manufacturers are furnishing them through G. Recker & Co., Cincinnati.

Measures have been taken to secure a patent for this valuable invention. LEE & LEAVITT,
15 Walnut-st, Cin'ti.

N. B.—They would also call the attention of the public to their valuable and extensive assortment of cast steel saws, and circular saw mills, etc.

CINCINNATI STOCK SALES.

HEWSON & HOLMES,

Have constantly on hand and for sale at the Stock Board, Merchant's Exchange, and at private sale, Railroad, Bank, and Insurance Stock, and Railroad Bonds.

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler	.....	Massachusetts
John E. Thayer, Esq.	.....	"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,	.....	Sandusky.
E. F. Osborne, Esq.	.....	Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	.....
" 14	..... $230
" 16	.....
" 18	 250
" 20	 275
" 22	 300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7537, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully,
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup't Cin. Ham. & Dayton Railroad.
August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

(On Baltimore & Ohio Railroad, midway between Baltimore and the Ohio River.)

MANUFACTURERS of *Engine Lathes, Planing Machines, Drill Presses, Hand Lathes, and other Machinists Tools.* These tools are built in a superior manner, from the very best materials, and are particularly adapted for railroad shops and all others repairing first rate machinery. Our location is very advantageous for shipping work to the West or South. Orders and communications receive prompt attention. Address

Cincinnati, O

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,
Christiana, Pa.
Or, to **CHRISTIAN UMBLE,**

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ½ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to adviso Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Ducling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Johnockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr3 140 and 142 Main street

Publishers, and Proprietors,

Railroad Printing.

WE have now attached to this office an extensive **Composition** and **Press Room** and **Bindery**, under the personal supervision of the proprietors of the Record. With confidence, therefore, we call the attention of Railroad Officers and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the Printing Business.

We are fully prepared to furnish **Railroad** and other **Reports**, with or without **Maps** or other **Illustrations**, gotten up at short notice and in superior style. Also, **Blanks of any description**, adapted to the wants of the various departments of the **Railroad service**, and to the wishes and tastes of the parties.

Also, **Railroad Tickets** and **Conductors' Checks**. Our patent **Card Press**, enables us to supply any demand at **Short Notice** and in **Unequalled Style**.

Also, **Blank Books**, ruled to any pattern, with or without **Printed Headings**, and bound in the most substantial manner.

With the numerous facilities for doing the **Best Work**, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,

Railroad Record Office, 167 Walnut st Cin.

TO RAILROADS AND CONTRACTORS.

Horse Powers.—The undersigned being agents for the sale of R. H. Pease formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

GAS.

Aubin's Patent.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

T. WRIGHTSON & CO.,

167 Walnut-st., Cin'ti.

RAILROAD MAP.

WE have now ready A Railroad Map of the West, containing all the Railroads construct ing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a compete t hand.

The size of the sheet is 24 by 38 inches, and can be sent by mail.

Price—plain	40 cents.
Colored in outlines	50 cents.
Full colored	75 cents.

Liberal discounts will be paid to those wishing them n quantities.

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to U. P. James will secure prompt attention

ENGINEERING!!

The undersigned is prepared to furnish

SPECIFICATIONS, ESTIMATES, AND PLANS,

RAILROAD HOTEL.

CINCINNATI, O.

THE GIBSON HOUSE, Cincinnati, is situated on Walnut-street, between Fourth and Fifth, in the immediate neighborhood of all the Railroad Offices. For comfort and convenience it is believed that this hotel is unsurpassed. It is heated with steam from the first floor to the fifth, thus making it the most desirable winter house in the West. The proprietor hopes to enjoy a share of the patronage of Railroad men.

A. WETHERBEE, Proprietor.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between Columbus and Urbana. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with he night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

Any of the Eastern Railroads may be referred to for proof of its importance and value. BRIDGES & BROTHER,

sep.15-tf 64 Courtlandt St., New York.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

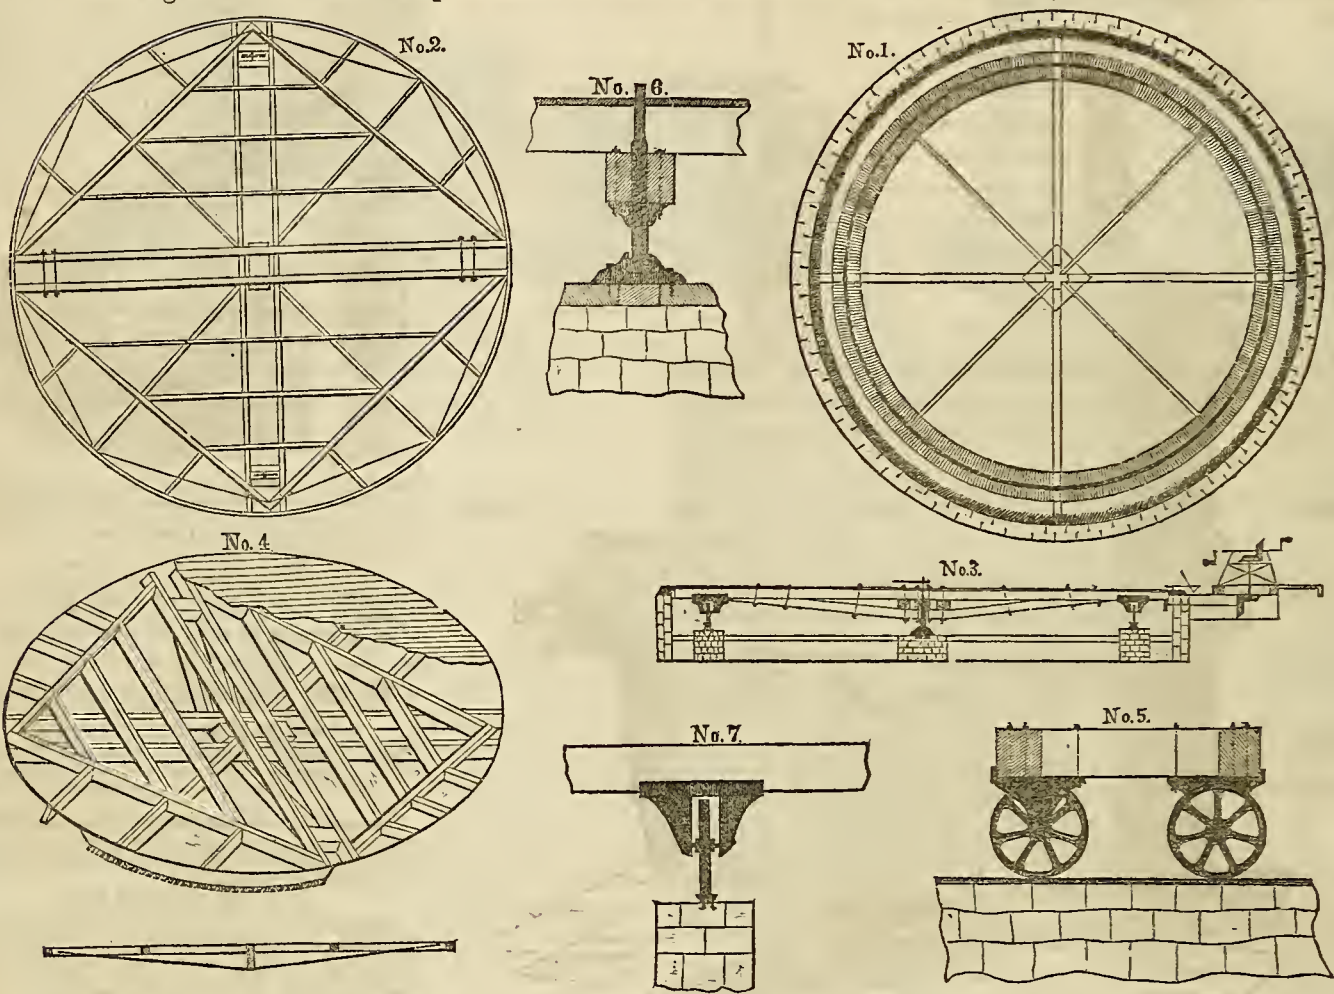
THE subscriber, late of the firm of Davenport, Bridgen & Co., Fitchburgh, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident that perfect satisfaction can be given in all work entrusted to our care.

We have now on hand the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States.



Feb. 16†* JOSEPH DAVENPORT.

RAILROAD IRON, LIGHT WEIGHT.

470 TONS, 47 lbs. per yard, good quality and pattern, now lying at New Orleans. For terms apply to VOSE, PERKINS & CO.,
ap27-4f New York

CARHART'S IMPROVED TURNTABLE.

Now building for 13 of the Principal Roads in Ohio, Indiana, New York, New Jersey, and North Carolina.

This Table, together with an Engine and Tender of 30 Tons Weight, can be Turned by One Man in 25 Seconds.

RAILROAD COMPANIES in want of *Turntables* of a permanent and durable character, at a low price, are respectfully referred to the annexed references. The undersigned being confident that the manner of turning engines by his Table is the most permanent, expeditious, and cheapest in the United States, solicits the attention of Engineers, and others, to his improvement. The undersigned being a practical mechanic, and having devoted his time, for the past five years, exclusively to the construction of Turn and Transfer Tables, Draw and other Bridges, is prepared with every facility for executing orders in that line with promptness and satisfaction.

The price, which is always based upon the use of the best materials and best workmanship which can be procured in the market where used, can be determined only by the locality.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal

"GARDNER'S ROCK DRILL."

DESIGNED for Mining, Tunneling, Quarrying Use, and Rock Excavations of all descriptions, by the use of which a saving of 50 to 75 per cent. is made. This drill can be operated by hand, horse, or steam power, and works equally as well horizontally or at any angle, as perpendicularly.

A silver medal, the highest prize, was awarded these Machines at the World's Fair

Applications for Territorial Rights and Machines must be made to the Patentee.

G. ARTHUR GARDNER,
Trinity Building, N. York.

RUNNING ARRANGEMENTS.—Our readers will find in their proper column, the Winter arrangements of the Cincinnati, Hamilton and Dayton Railroad. The connections of this road extend to the East, North and West.

CREDITS.—We would suggest to our exchanges that we would like to have them credit us as the Railroad Record, and not as the Rutland Record; we do not know of such a paper.

HUNT'S MERCHANTS' MAGAZINE for February.—The February Number of this excellent publication is received and contains much interesting and valuable matter.

DEBOW'S REVIEW FOR FEBRUARY, 1855.

The leading articles are upon Slavery at the South, Southern Society, Cuba, The Sandwich Islands, The Slave Trade, The Present Hard Times, Progress of the United States, The Mineral Resources of the United States, Education in our Country, with a great variety of Commercial and Agricultural Statistics, etc. The work is published monthly, 144 pages, at New Orleans and Washington, at $5 per annum. Its most important papers, for the last eight years, have been condensed into three handsome octavo volumes, which are delivered without postage for $6.

STEAM NAVIGATION IN THE WEST—HUMAN MOVEMENT, AND COMMERCE.

Steam is now the great motive power on both land and water; and the increase of steam machinery, indicates almost exactly the increase of locomotion and of the industrial arts. While steam machinery applied to railways has increased in a most wonderful degree, steamboats on water have also increased very rapidly; and steam machinery applied to the arts, perhaps, more rapidly than either. Indeed, if we had the statistics of steam machinery, it would astonish the world.

But, the most astonishing part of the whole is, that while steam machinery, as a substitute for water, men, and horses has thus been added to the ordinary moving powers, in such immense amount, yet, those ordinary powers have not diminished; nay, they go on increasing! All predictions of the effects of steam, either positive or negative, have failed. No man has at all succeeded in estimating the power of steam. Dr. Lardner made a perfect demonstration that ocean steam ships could not succeed; yet, we now have steam ships on every sea, in every portion of the globe! So on the introduction of railways, it was estimated, with supposed certainty, that horses must go out of use comparatively, where railways were employed; yet, we see horses more in demand than ever, and prices higher than ever.

No man has estimated or can estimate, the power and effects of steam. Why? Because, of all the motive power within the reach of man, *there is none so expansive and so cheap as steam.* Steam is unlimited in expansion, and coal is unlimited in quantity, and when we say this, we say enough. No motive power can compete with it, and as it flies round the earth, it will in power and velocity increase, till what is, cannot compare with what will be.

It is our intention to notice the progress of steam power, and we will begin with steamboats, whose power, multiplication and effect, in the Valley of the Ohio, is really marvelous.

1. OF STEAMBOAT BUILDING.—Steamboat building commenced in the West, at Pittsburg, in 1811; but, it was 1817 before more than half a dozen boats were built. Since that time, it has continually increased. Having before us the returns of steamboat building for several years, we give below a table of the number built in five successive years, from 1847 to 1852, in the ports of the West, viz:

In Pittsburg	213	boats.
In Wheeling	16	"
In Cincinnati	138	"
In Louisville	172	"
In Nashville	9	"
In St. Louis	42	"
In Chicago	1	"
In Mackinaw	1	"
In Detroit	26	"
In Toledo	2	"
In Sandusky	2	"
In Cleveland	26	"
Aggregate	648	"

The whole number built in the U. States during this year, was 1,036; so that in that time. *six-tenths* of all the steamboat building in the U. States, was in the West. Of the above 648 boats, 548 were built on the waters of the Ohio. *One-half of all the steamboats built in the U. States, are built on the waters of the Ohio.*

It may be said, that the tonnage of boats built on the seaboard is greater; but the difference is really not very great. The *average* tonnage of boats built on tide water is only 350 tons each; and the *average* tonnage of boats built in the interior, is 300 tons each.

2. OF THE NUMBER AND TONNAGE of boats built in the West.—It is difficult to ascertain the precise tonnage of steamboats, at any one time; but in a report made to the Senate of the U. States, by Secretary Corwin, we have the exact steamboat statistics for the 1st of July, 1851. It is as follows:

	No.	Tonnage.	Crews.
On the waters of the Miss	253	67,957	6,414
On the waters of the Ohio	348	67,601	8,338
On the waters of the Lakes, West of Niagara	130	58,784	2,411
Aggregate	731	194,342	17,163

Since 1851, the number has undoubtedly increased. In the three and a half years elapsed, there have been built about 400 boats; and of the old ones, nearly one-third have been destroyed or worn out—making 240. We have, then, an increase of 160, making the whole number of steamboats on the Western rivers and Lakes about 900, and tonnage 260,000 tons.

3. OF VOYAGES.—It is an extremely difficult thing to form a correct idea of the number and extent of steamboat voyages. The *coasts* of the Western rivers and Lakes, make full 30,000 miles. The ports are as numerous as the towns, and villages on the coasts; and the voyages are complicated in every possible way. We can get an outline view, however, by taking the *arrivals and departures* at some of the principal places. Some of these are as follows, viz:

	Arrivals and Departures
Cincinnati	7,743
St. Louis	6,600
Chicago	1,120

We have no returns of arrivals and departures at other ports. But these are enough to form some estimate of the whole. Looking to New Orleans, Pittsburgh, and Louisville, as compared with Cincinnati and St. Louis, we think the *regular* steamboat voyages on the Ohio and Mississippi, must make at least 20,000 per annum; and the arrivals and departures, consequently, about 40,000. This will give an *average* of 30 voyages to each boat, which we think very near the fact.

So on the Lakes, estimating by what we know of Chicago and Toledo, we think on the Lakes there must be about 4.000 steam voyages, or 8,000 arrivals and departures.

4. Steam Tonnage of Western Ports.—In 1852, the steam tonnage of the several Western ports, were as follows, viz :

Pittsburgh	16,950 tons.
Wheeling	7 200 "
Cincinnati	24,700 "
Louisville	15,200 "
Nashville	3,600 "
St. Louis	32,000 "
Memphis	500 "
Vicksburg	1,000 "
Machinaw	1,800 "
*Chicago	—— "
Detroit	16,500 "
Toledo	1,800 "
Cleveland	6,500 "
Sandusky	500 "
Buffalo	26,000 "
Aggregate	154,250 "
In the Ohio Basin	67,650 "
In the Mississippi Basin	23,500 "
In the Basin of the Lakes	53,100 "

5. Human Movement by Steamboats.—The human movement by steamboats for 1851, was reported to the United States Senate, by Secretary Corwin, in Executive Document 42. Excluding ferry boats, and all modes of transportation, except *steamboats*, the following is the result of the principal Western towns :—

Pittsburgh	428,745 persons.
Wheeling	139,170 "
Cincinnati	270,796 "
Louisville	120,000 "
Nashville	24,340 "
St. Louis	367,798 "
Chicago	85,800 "
Detroit	369,430 "
Toledo	31,842 "
Sandusky	2,190 "
Cleveland	—— "
Mackinaw	41,212 "
Buffalo	171,557 "
Aggregate	2.002,890 "

The report gives no account of the movement at Cleveland, where there are a large number of passengers passing to and from.

More than *two millions of persons* were, in 1851, moved by steamboats on the waters of the West, *exclusive of the Lower Mississippi.* The number is much greater now.

At that time, the *aggregate of human movement in the West, exceeded five millions.* Now it is trebled, by the railways. Of that, we shall give an account hereafter.

6. Value of Steamboat Commeree.—The commerce of the Mississippi outlet, both ways, is equal to *one hundred and fifty millions.* The commerce of the Ohio Valley in steamboats, is equal to *eighty millions;* and the commerce of the Lakes West of Buffalo, is equal to *two hundred millions.* Of the Lake commerce, probably not one-half is done in steamboats. Altogether, we may safely estimate the value of commerce carried on in Western steamboats, at full *three hundred and thirty millions!* Thus we have of steamboat commerce in the West. *Eight hundred steamboats*, of nearly *two hundred thousand tons;* traversing *thirty thousand miles of coast*, and moving a *commerce valued at three hundred and thirty millions of dollars!*

This is the creation of only forty years of industry and enterprise in the Valley of the Mississippi. What will another forty years accomplish!

This is the result of steam applied to *vessels* only. What it is when applied to the Arts, and what when moving locomotives, we shall consider hereafter.

Railways have not diminished steamboats. On the contrary, they are help to them; this is a certain function for each to perform, which will always be needed, and will not diminish with time.

CITIES OF THE WEST, NO. 4.—DAYTON, O.

Dayton is one of the most interesting interior towns of the West. It is situated at the junction of the Mad river with the Miami, in a most fertile and beautiful country. No part of the United States that we know of, exceeds in natural richness, the section round Dayton. Neither the Miami nor Mad river, are here large streams; but their use and benefit to the town and country, are immense. In the valley of the Miami, lies the Miami Canal, which crosses the entire State from Cincinnati to Toledo. At Junction, it unites with the Wabash Canal, making in all near 500 miles of continuous canal navigation. On the other hand, the water of Mad river has been converted by hydraulic works into power, for the use of machinery; so that Dayton is one of the most active manufactnring towns of the interior.

It was laid out in 1785, by Daniel Cooper; but ten years after contained only five families, and in 1810, but 383 inhabitants. Since that, it has progressed rapidly, having :—

In 1820	1,139
In 1830	2,954
In 1840	6,067
In 1850	10,977
In 1853	16,562

This is doubling in each eight years, at which rate it would have 30,000 in 1860.

This town is beautifully laid out, the Main street being 132 feet broad; Main cross 112, and the others 100 feet. It is very well built, having the finest court house in the State; many churches; the Phillips' House, and numerous handsome residences.

On the line of the Hydraulic Canal, we are reminded of Lowell. Numerous large and solid factories are seen rising in succession, and indicating the vigor of its manufacturing enterprize. In fine, Dayton is one of the handsomest and most interesting towns anywhere to be found. Being entirely inland, it has none of the great display of commerce and shipping, which strikes one in the great towns on the coast. To compensate for this, Dayton has not only the canal, but a system of railways, and turnpikes, almost unequalled. Some ten or a dozen fine turnpikes lead out on every side, and make Dayton the point of shipment for the farm produce of the surrounding country. Then *six* different railways centre here, viz: The *Cincinnati Hamilton and Dayton*, a great thoroughfare; the *Dayton and Western*, leading to Indianapolis; the *Greenville and Miami*, leading to Greenville and Union; the *Hudson and Lake Erie*, leading to Sandusky; the same leading by Springfield to Mt. Vernon, and the *Dayton and Xenia.* Thus Dayton has communications of all kinds with all places around.

For many miles round Dayton, the country is densely inhabited, and most beautifully cultivated. The stranger visiting the Miami country, should not fail to see Dayton and its surroundings.

MULTIPLYING BANK NOTES BY PHOTOGRARHY.

We were shown, a day or two ago, some beautiful specimens of the Photographic art, by Mr. Fontayne, an excellent daguerreotypist, of this city. Mr. Fontayne has been experimenting for years with reference to the improvement of the art as applied to producing a perfect representation of the human face. In these experiments it was not always convenient to have a person to sit, and hence resort was had to engravings, bank notes, or anything else which could be readily placed before the camera. The result of these experiments, while they have added to the skill of the daguerreotypist, in his proper vocation, have also demonstrated that bank notes can be copied to any extent, and these copies have this point of difference between them and the counterfeit, that while the counterfeit is but an imperfect imitation, the photographic copy is a perfect counterpart of the original note. Not a line nor a shadow of the original but leaves its impress on the copy, and so perfectly disguised are all the traces of the mode of its preparation, even to the lustre of the ink, that the best judges have pronounced the photographic notes to be genuine. One note in particular, after deceiving many, was passed into the Trust Co.'s Bank, and after careful inspection on the part of the officers of the institution, was declared to be genuine. No person, unless especially skilled in photography, could detect the fraud. There is a distinction between an original engraving and the photographic copy, just as there is a difference between a natural landscape and a view of the same through a telescope, but this distinction is so obscure, that none but a connoisseur could observe it. This every one cannot be. Experience, practice, and quick perception are necessary, and few of the business community have the time or artistic skill to acquire them.

Now it becomes a serious question, what will be the influence of this discovery on our present currency. We have heard it stated that the red backs of our State Bank issue are proof against photographic counterfeiting; but this is not true, as we have seen

this perfectly imitated in the notes mentioned. So far as we know at present, the only reliable test is to be found in chemistry. Just as in our gold coin, the counterfeit may imitate the color and general appearance, but can not render his composition invulnerable to the action of acids; so in the photograph notes, the chemical test is the only reliable one that can be employed. Thus it will be seen, the skillful application of the principles of chemistry is at once the means and the detection of their process. But the chemical test is not free from objections. The acid employed as the test, if not carefully removed, will destroy whatever vegetable or woollen substance may be exposed to its action. It is, therefore, greatly to be desired that some harmless mode of detection should be discovered, or if that is impossible, that some new mode of representing the issues of our banks should be invented which can not be photographed or counterfeited.

MUSCATINE, IOWA.

The rapidity with which many of the new portions of our country are filled up, and become important, is truly astonishing. It is but a few years since Iowa was a wilderness; now it contains a number of important towns among which are some of the most rapidly increasing in the Union.

Muscatine, the statistics of which we copy from the Chicago *Press*, is situated on a bend of the Mississippi, the first great bend above the mouth of the Iowa, half way between that point and Davenport. It is the county town of Muscatine county. By reference to the map, it will be seen that this county is traversed by Cedar river, the principal branch of the Iowa, and that it is bounded on the east by the Mississippi, hence it is well irrigated and has good facilities for getting its produce to market.

Statistics of the City and County of Muscatine Iowa.

Population of Muscatine county, exclusive of city	7,500
Population of the city of Muscatine	4,600
Increase of population in city and county for 1851	4,800

There are in the place the following manufactories, public buildings, etc.; 2 steam flouring mills; 2 steam saw mills; 1 steam stave machine; 3 steam shingle machines; 1 steam barrel manufactory; 12 blacksmiths shops; 7 hotels; 2 public school-houses; 1 wind mill for sash, etc.; 1 steam foundery; 1 steam bedstead manufactory; 3 sash manufactories; 3 cabinet manufactories; 2 carriage manufactories; 52 business houses; 9 churches, and 2 pork houses—together with the usual number of tailor, shoe and other shops of the minor manufactories.

Amount of produce received in the City of Muscatine, for 1854.

Wheat.....bushels	393,550	Tim. seed....bushels	160
Rye..... "	3,176	Flaxseed..... "	716
Corn..... "	121,962	Beeswax, lbs.....	1,050
Oats..... "	22,242	Dry Hides, lbs.....	57,380
Barley..... "	2,800	Wool, lbs.....	2,228
Beans..... "	3,550	Hogs, cut.....	13,000
Potatoes.... "	11,317		

The average weight of hogs was 220 lbs., a material increase from last year.

Manufactured.

Flour, bbls	29,515
Cooperage—Pork barrels	9,800
Flour barrels	56,200
Whisky barrels	550
Staves ready for setting up and shipped	1,000,000
Bedsteads (from the log)	2,900
Plastering laths	1,433,100
Broom handles	50,000
Window sash, No. of lights	100,000
Pine lumber, feet	2,261 900
Shingles	1,126,500

Owing to the large emigration into Muscatine and the adjoining counties, we may safely put down 33 1-3 per cent. of this amount of products as consumed at home. Leading citizens of Muscatine say that St. Louis is their natural market, and, so soon as the obstructions in the Rapids are removed, no other market will be sought.

SNOW AT THE NORTH.

The storm which has brought us a little sleighing has extended over the entire north, and has been almost unprecedented in duration and the amount of snow fallen. The railroad tracks being peculiarly exposed, have been blocked up, and for several days many of the most exposed were not passable. The trains that were out were stopped in many instances by the rapidly increasing drifts, more particularly in the roads leading west and south from Chicago. In one or two cases the obstruction proved so great, that it was impossible to proceed either forward or back, and starvation stared the passengers in the face. The fires went out, the wood was all consumed, and they were compelled to break up seats and every other article that could be spared, in order to maintain a little warmth.

It is but seldom in a life time that we experience so terrible a storm, the last we remember was in 1836, nineteen years ago, and extended over the eastern states in many places to the depth of four feet.

CURIOUS APPLICATION OF THE DAGUERREOTYPE ART.

The application of scientific art to the purposes of useful life are every day becoming more important and curious. We received a day or two ago in one of our exchanges a lithograph of the daguerreotype likeness of an absconding clerk, who had contrived to obtain from the bank eleven hundred dollars of his employer's money. The likeness, together with a minute description of his personal appearance and height, would enable any officer of ordinary sagacity to detect the scamp, if he should once see him, and is thus scattered broad cast over the land.

☞ Coal, which is said to be of excellent quality, is being mined in Martin county, Ind. The coal field now opened is about one mile from the Ohio and Mississippi Railroad, and sixteen miles from the New Albany and Salem railroad.—*Madison, Ind., Banner.*

Railroads.

FORT WAYNE AND CHICAGO RAIDROAD—ENGINEER'S REPORT.

This road has been projected with reference to the portion of the trade and travel of Chicago, destined for the region lying to the south-east of that port.

With reference to its object, the report says: "The Fort Wayne and Chicago road has not been projected as a rival to the two eastern roads already in operation, but had its origin in the conviction that from a point like Chicago, with its concentration of business, these three roads would be fully sustained; and were actually needed. It is the natural extension of the Pennsylvania chain of roads to the north-west, and is now the only link wanting, but 146 miles — the Ohio and Indiana road being completed to Fort Wayne—to open the direct railway communication between Philadelphia and the Mississippi, at Rock Island, Galena, Burlington and Alton.

"The total length of the line will be 147 miles, of which 144 miles are straight line, and but three miles of curved line; shortest radius of curvatures, 3,820 feet; total deflec- is but 207 degrees, total ascent going west, 697 feet; total ascent going east, 889 feet maximum grade, 26.4 feet per mile. The formation of the country is favorable for good drainage, and excellent gaavel for ballasting is found on the line of the road. The avoidance of large water-courses cheapens the route, both in construction and repairs; only 1,100 feet of truss bridging is required on the whole road.

"The entire road, with the track laid and prepared for through business, with partial ballasting, is estimated to cost $2,683,448, including right of way and depot grounds, with commissions, exchange, insurance, and all other expenses connected with the purchase and delivery of iron rails. With full equipment, depot buildings, ballasting and fencing, it is estimated to cost $3,143,448, averaging $21,384 per mile.

"The right of way for the whole route has been arranged, as far west as the vicinity of Chicago, and, with one exception inconsiderable in amount, has been paid for. Thence to our proposed depot grounds, near the heart of the city, a large proportion has been settled and paid. Ample grounds have been purchased for the outer depot, affording a favorable connection with the lake and canal commerce. At Fort Wayne, and all important points intermediate, depot grounds have been procured.

"On the entire line to Chicago, the labor of grading and delivery of cross ties, is about two-fifths performed.

"The iron rails purchased are of the com-

mon pattern of heavy T rail, weighing 60 lbs. to the yard. The estimates and plans are all made with a view to a first class road, in all respects."

FIRST REPORT

Of the President of the Charleston and Savannah Railroad.

The President of this road, which is the continuation of the great Atlantic chain of railroads through South Carolina, has recently made a report to the stockholders, in which he briefly recounts the history of the enterprise from its origin to the date of the report.

The President says: "The first public meeting, composed of citizens of Beaufort District, in favor of uniting Charleston and Savannah by Railroad, assembled in June, 1853; the measure, after an elaborate discussion, was recommended to the favorable consideration of the people of the seaboard, and resolutions adopted, appointing committees to raise subscriptions in furtherance of the object, and to apply for Acts of Incorporation to the Legislatures of South Carolina and Georgia.

"In November of the same year, a Convention met, in Charleston, for the purpose of consulting together upon the best means of promoting the project. This convention was called together at the invitation of some of the most influential citizens of Charleston, and most numerously attended by a highly intelligent body of delegates.

"On the 20th December following, a charter was granted by the Legislature of South Carolina, with a capital of $1,500,000, and on the 18th of February, 1754, we received a very liberal charter from the State of Georgia. In February, 1854, the experimental surveys under Mr. John McRae, were commenced. We were enabled to make these surveys, through the very liberal appropriation afforded by the City Council of Charleston, which had from the first appreciated the vast importance of the proposed scheme for connecting the two cities.

"In July following, the requisite amount to secure the charter having been subscribed, a meeting of Stockholders was called together in Charleston, when the Company was duly organized and the President and twelve Directors elected."

The report then proceeds to notice the arrangements for the depots at Savannah and the crossing of the Savannah river by a bridge above the city. The President then says: "In the location and construction of the road we shall conform to the 'shortest practicable route,' *so far as the topographical feature of the country and other contingencies may render expedient.* We hope that the line will be so laid down that no shorter and better one between Charleston and Savannah can hereafter be brought into successful competition with it.

"There are many well managed and well built roads in the country, which, from having yielded in the beginning to the prospect of a local trade and other collateral considerations, to the neglect of those rules that should govern the proper location of a road, have been most injuriously affected by the rivalry of new and shorter lines between the same termini. Now, the true line for a railroad, all things being equal as regards trade in both directions, would be a strictly straight and level one, and how far any departure from these conditions may be judicious, is a scientific and economical question to be solved by the Engineer.

"By way of illustration, let us suppose a road connecting two points, 100 miles apart. The Engineer is induced, from some motive or other, to increase the distance to 101 miles. Now, what will be the tax upon the community by this increased length of *one* mile?

"The income of the road is the money paid by the public for the use of it, and is made up of receipts for carrying each passenger and each ton of freight at a fixed charge per

Suppose $1,000,000 to be the income of a road, 100 miles long, it would be $1,010,000 for a road 101 miles in length, doing an equal amount of business. In other words, the increased distance of *one* mile imposes an annual tax upon the public of $10,000 per mile over and above what their expenditure would have been, had the road been only 100 miles long. This annual expenditure represents a capital of $142,857, at 7 per cent. interest, and of course increases as the income or gross receipts of the road increases.

"But this is not all. Every mile of road is usually estimated to cost the Company annually $3,000. This $3,000 is the sum deemed necessary to keep each mile of road in running order, and represents a capital of $42,857 at 7 per cent. per annum. And lastly the item of construction per mile is an additional element of cost.

"These are the penalties incurred for increasing unnecessarily your distance.

"Now this subject of deviating from the true direction, in order to secure a local trade, should be a secondary consideration, and should not weigh with the obligations which the stockholders owe to the masses who use the road. The local business can be more economically provided for by a branch road."

The report devotes considerable time to the discussion of the comparative advantage of free and slave labor, which we will reserve for future notice.

NEW YORK CENTRAL RAILROAD.—The following is a comparative statement of receipts from passengers and freight during the month of December, 1853 and 1854:—

	Passengers.	Freight.	Total.	Increase.
1854....	$200,364.76	$251,459.25	$451,823.61	
1853....	201,581.78	245,382.37	446,964.15	$4,859.46

N. B.—In consequence of the severe snow storms in December, the freight and a portion of the passenger business on the western division was nearly suspended for the first seven days of the month.

TROY AND GREENFIELD RAILROAD.

We learn from our eastern correspondent, that this Company have recently put their whole road, including the Hoosac Tunnel, under contract, to a single party.

There are to be built 37½ miles of road and 4½ miles of tunnel in one line; contract price, $3,570,000. The contractor is allowed five years in which to build the tunnel and three to build the road, with the use of road and tunnel for that period if completed before.

The tunnel, which is the largest, we believe, in the country, is to be made circular, 24 feet in diameter, and suited for a double track. This gigantic undertaking is to be commenced immediately.

The road now put under contract extends from Greenfield on the Connecticut River Road to a point on the Western Railroad near North Bennington, and from thence on the Troy and Rutland Railroad to Troy. On the east by the Vermont and Massachusetts Railroad to Fitchburg, and by the Fitchburg Railroad to Boston. It will thus be seen that this short line of 42 miles will open another avenue to Boston and the east through Northern Massachusetts.

PANAMA RAILROAD.

This enterprise, so important to the commerce of the world, is now at the point of completion. A grand excursion in honor of its opening, was to leave New York in the steamer *George Law*, on the 5th of February. The excursion consists of the principal stockholders and invited guests of the road. They are to go over the road from Chagres to Panama, and there have a splendid festival. We trust the excursion will prove as pleasant as it promises to be interesting.

OHIO AND INDIANA RAILROAD.

At a meeting of the stockholders, held at Bucyrus on the 10th inst., the following were elected directors for the ensuing year: Wm. Robinson, Jr., of Pittsburgh, Pa.; S. Hanna, of Fort Wayne, Indiana; Pliny Hoagland, of Fort Wanyne, Ind.; P. S. Marshall, of Bucyrus, Ohio; R. MacKelly, Upper Sandusky, Ohio; T. K. Jacobs, of Lima, Ohio; D. W. Burt, of Van Wert, Ohio. Mr. Burt is elected in place of Dr. Merriman, who declined re-election. The others were all members of the old board.

The new board organized and elected S. Hanna, President; J. R. Straughan, Superintendent; —— Davis Secretary and Principal Clerk; G. Quimby, Treasurer.

The principal office of the railroad has been removed to Fort Wayne.

We are gratified to learn that the business and prospects of the company fully equal the most sanguine expectations of its friends. The number of passengers carried is unexpectedly large, and the amount of freight offered, tasks to the utmost the capabilities of the company for its transportation; 200 additional freight cars have been put upon the road, and more are in course of construction. A daily freight train, heavily laden, now arrives and departs regularly. The receipts of the company for the current year will reach $250,000 or $300,000.—*F. Wayne Sentinel.*

MEASURES OF DIFFERENT COUNTRIES.

The Newburyport *Herald*, in the course of an article on Weights and Measures, remarks that no two nations have the same—though the same name to designate them may be used in many countries. Take the mile measure for instance: In England and the U. States, a mile means 1,760 yards; in the Netherlands, it is 1,093 yards; while in Germany, it is 10,120 yards, or nearly six English miles; in France 3,025 yards. The Scotch mile is 1,984 yards, and the Irish 2,038 yards. The Spanish mile is 2,472 yards, and the Swedish mile 11,700 yards. These are computed in English yards; but the yard itself, of three feet in length, has divers significations in different places. The English yard is 36 inches; the French 39.13 inches; the Geneva yard 57.60; the Austrian 37.35; the Spanish yard, 33.0e; the Prussian, 36.57; the Russian, 39.51. For measures of capacity, the dissimilarity is yet wider, and more perplexing. The British have two sorts of bushels, the Imperial and the Winchester, of different capacity. The Winchester bushel is the United States standard; but the State of New York has another of different capacity, and other states have varying standards of their own. These are incommeasurable with the measures of any other nation.—*Com. Adv.*

THE MICHIGAN CENTRAL RAILROAD STEAMERS.—The Detroit papers inform us that the fine new steamers of the Michigan Central Railroad line for Buffalo, the *Plymouth Rock* and *Western World* are undergoing great alterations and repairs in order to increase their safety and render them more the equals of the Sandusky and Buffalo steamers, *St. Lawrence* and *Mississippi*, and the Cleveland steamers, *Crescent City* and *Queen of the West*, in point of comfort and speed. Their boilers have been set forward thirty-two feet, and watertight bulkheads have been put in. The double tiers of state rooms on the upper deck have been overhauled, and made to extend from saloon to guard. By this means a better system of ventilation is obtained, and the comfort of passengers greatly enhanced. The *Advertiser* say, "it is contemplated to expend in these repairs about $25,000, and bring them out in the spring the fastest, the best, and most comfortable boats ever put upon these waters. Whether they can be made to fill the place of the favorite old *Mayflower*, remains to be seen." This is pretty big "brag," but, forgivable, perhaps. It would have been more modest(however, to have said, "it is contemplated, by a heavy expenditure in alterations, to make them the equals of the steamers running on the Southern shore of the Lake to Cleveland and Sandusky.—*Com. Reg., Feb.*

THE RAILROAD BRIDGE ACROSS THE SUSQUEHANNA, on the line between Philadelphia and Baltimore, is a very formidable and expensive undertaking. It will require a year and a half from the present time to complete it. Much work in the way of preparation has already been done, and a diving bell of new construction and great power has been engaged, and is ready to commence its operations as soon as the weather will permit. The construction of the piers will be pushed forward as fast as possible. In the meantime the new and splendid ferry boat now used at the crossing, obviates all unnecessary delay, and affords to passengers every comfort and convenience. The management of the road receives encomiums from all quarters for the successive improvements that have made the line one of the best in the country.—*Balt. Am.*

WESTERN RAILROAD, MASS.—The gross income and expenditures of the Western Railroad Company of Massachusetts, for the past two years, were as follows:

	Total Earnings.	Expenses.	Net Income.
1853	$1,525 223	$ 778 487	$745 736
1854	1.763 944	1,044 241	719 703

The large increase in the expenses of 1854, beyond those of 1853, is owing to the high cost of materials and labor, and the large amount of renewal of rails. The fuel of 1854 cost $50,000 more than in 1853, owing both to increased price and increased amount used. There were $121,000 spent in 1854 for the renewal of rails, against $65,000 in 1853. The necessary expenditure by cars, new, and repairs of old, in 1854, was $30,000 in advance of 1853. The excess of expenditure in the locomotive department, was also about $40,000.

RAILROAD DECISION.

McMILLAN vs. Maysville and Lexington Railroad Company, Nicholas county.

The appellant (among others) agreed to pay to the Maysville and Lexington Railroad Company $50 on each share of stock subscribed by them, upon condition that said road should be so located and constructed as to make the town of Carlisle a point; otherwise, the subscriptions were to be null and void.

The appellant contends that the stock was to be paid not until the road was finished; that the road should be so *located* and *constructed* as to make Carlisle a point, etc.

The Court, per Justice Simpson, held—

That the *construction* of the road and payment of the stock were to be concurrent acts. That the stock was subscribed for the very purpose of aiding in the construction of the road, and must be paid as the construction of the road progresses. That the postponement in the payment of the stock is inconsistent with the very end to be accomplished—that therefore such postponement could not have been intended. Thus much his honor says as regards the nature of the enterprise, and in aid of the express terms of the writing as regards time of payment, which are that the subscribers agree to pay the stock subscribed, in such instalments and at such times as might be required by the board of directors of said company.

[The appellant contends also that the agreement sued on is void on the ground that the company has no authority under their charter to receive any but unconditional subscription of stock.]

His Honor refers to the 24th section of the charter (Session Acts, 1849–50,) by which the only limit on the power of the president and directors in the matter of disposing of the subscribed is, that the same should not be disposed of under its par value, and rules that their power to dispose conditionally of the stock seems to be unquestionable. The stock itself was not conditional in this case, but only the agreement to take it. That, when the condition was performed, the subscribers became unconditional stockholders; and that this mode of obtaining stock was sanctioned by the charter, and does not seem to be prohibited by sound policy, besides being usual.

That the fact that the company has suspended operations upon the road, or even that the means of the company are wholly inadequate to the completion of the road, does not furnish sufficient reason why appellant should not pay his stock, as it may be necessary to aid in the payment of debts or completion of the road.

His Honor says that a final abandonment of the work by the company, and the fact that the stock sued for was not necessary to the payment of demands against the corporation, would release appellant from obligation.—*Kentucky Yeoman, Jan.* 19.

Judgment affirmed.

Miscellaneous.

GEOLOGY OF THE STATE OF MISSISSIPPI.

It has already been published in several papers of our State, that I have discovered on my geological tour through the south-eastern counties of the State of Mississippi, a very important and really inexhaustible deposit of Shell-Marl. This deposit is in the southern part of Clark county; I found it first on the plantation of Gen. W. B. Trotter, in a deep gully, with high and perpendicular bluffs, on Section 3, Township 10, Range 7 West, about 20 feet under the surface, cropping out in the gully. This really invaluable deposit of Marl, is evidently a member of the Tertiary (Eocene) Lime Formation which is so well developed in the south-eastern part of our State. This formation is similar to the Cretaceous formation of the Secondary period, of which it is most evidently a continuation. It consists:

1. Of a hard Carbonate of Lime, or white Limestone, in many localities eminently fit for burning Quick-Lime:

2. Of a soft Aluminous Carbonate of Lime, an inferior kind of Marl, and

3. Of a fine Green-Sand, full of tertiary shells and of a superior quality, generally better than our Green Sands of the upper and lower Cretaceous formation of the secondary period, and eminently fit for a Marl of Prairie and heavy clay soils.

The deposit of fine Marl, above mentioned, takes the place of the Green Sand of the tertiary Lime formation; it consists to a large extent of the detritus of shells and their former inmates, the decayed Mollusks. This bed of Green Sand is not confined to Gen. Trotter's plantation, I found it also outcropping along the bluff of the Chickasawhay river. This bluff is in that locality (Sec. 3, Township 10, Range 7, West) very nearly 100 feet high; the deposit of Marl appears for miles along the river, and forms its bed for more than one mile; it is in some places at least 50 feet thick. This deposit appears to dip from East to West, its strike is decidedly from North to South. At the first view of this deposit of Marl, I recognized its superior quality and its great importance for a purely agricultural State as ours is; I declared it instantly the best Marl I ever had seen, but a rapid analysis to which I have, since my return to our University, submitted the specimens of Marl collected partly on Gen. Trotter's plantation, partly on the bluff of the Chickasawhay river, has by far exceeded my expectation.

According to this analysis the Marl contains in 100 parts:

Iron and soluble Alumina	8.000
Carbonate of Lime	32.954
Phosphate of Lime	3.352
Sulphate of Lime	3.648
Chloride of Magnesium	900
Potash and Ammonia	7.840
Insoluble Silica and Alumina	41.530
Hygroscopic water and loss	1.740
	100.000

According to the above analysis 100 lbs. of the Marl contain 58.460 parts of soluble matter: this soluble matter consists of 8 lbs. of Oxide of Iron and Alumina; nearly 33 lbs. of Carbonate of lime; 3.352 lbs. of Phosphate of Lime; 3.684 lbs. of Sulphate of Lime; 9-10 of a lb. of Chloride of Magnesium; 7.840 or very nearly 8 lbs. of Alkalies, mostly Potash and a small quantity of Ammonia. It is, therefore, very evident that this Marl must be a most excellent manure especially for light soils, of which the northern, middle, and southern parts of our State abound. It contributes to the value and importance of the deposit of Marl, that it is not only situated in a region where it is eminently applicable, but that it is immediately on a navigable river, and within a mile or two only from the Mobile and Ohio Railroad; it can, therefore, easily be transported to many counties of this State and of Alabama.

Of what importance good Marl is for an agricultural State, is shown their example of the States of North Carolina, Virginia, and New Jersey; a large part of the land of those States is actually renewed by the effect of Marl, and I doubt whether either of those States can produce such a superior Marl as that of the deposite of Clarke county, which is, indeed, not much inferior to Guano, and for some soils of our State even better.

The great importance of this deposit of Marl for our State has induced me to hasten the publication of its discovery and quality, and I now invite the agricultural public to avail themselves as soon as possible of this fine manure, and to inform the undersigned of its effect.

The tertiary Lime-formation in Clarke and Wayne counties, does not only afford this fine Marl, but as I have already remarked, the upper part of it, the hard Carbonate of Lime or Limestone yields in some places, a most excellent material for burning Quick-lime. Such a locality I found in Wayne county on round Hill, near Lime-stone creek, immediately on the Mobile and Ohio Railroad, and on the plantation of Dr. E. A. Miller. There are three different kinds of lime-stone to be found, viz: a very hard, white lime-stone, hard enough for building; a soft lime-stone of a yellowish color, and rather brittle, and lastly, a shell lime-stone nearly entirely formed of tertiary shells especially of the genus Pecten, and still more mixed with Oxide of Iron, and, therefore, very yellow. I collected specimens of all those three different kinds, and an analysis of them have given the following results:—

No. 1. The hard lime-stone consists in one 100 parts of:

1. Insoluble Silica and Alumina.....	6.300 per cent.
2. Oxide of Iron and soluble Alumina...	7.200
3. Carbonate of Lime.....	86.500

No. 2. The soft Limestone contains in 100 parts:

1. Insoluble Silica and Alumina.....	15.050
2. Iron and soluble Alumina.....	5.350
3. Carbonate of Lime.....	79.500

No. 3. The Shell Limestone contains:

1. Insoluble Silica and Alumina.....	9.200
2. Oxide of Iron and soluble Alumina...	6.650
3. Carbonate of Lime.....	84.150

Carbonate of Lime contains besides the Lime, Carbonic Acid Gas at the rate of 43.-708 per cent. No. 1. contains, therefore, in 100 lbs. only 48.693 lbs. of pure Quick-Lime; No. 2. only 44.809 lbs., and No. 3. only 47.-370 lbs. If well burnt, 100 lbs. of No. 1. will, nevertheless, weigh 62.193 lbs., but 13,500 lbs. are impurities, and only 48.693 lbs. are pure lime; 100 lbs. of No. 2. well burnt will yield 65,304 lbs. but 44,809 lbs. are only pure lime and 20,495 lbs. are impurities mixed with it. 100 lbs. of No. 3. well burnt, will yield 63,220 lbs., but 47,370 lbs. are only pure lime, and 15,850 lbs. are impurities. It is, therefore, evident, No. 1. the hard lime-stone, is the best for making Quick-Lime, it not only yields most, but gives also the purest lime. If we have such fine material for manufacturing Quick-Lime in our own State, why do we not use it? why do we purchase our lime from other states, especially from the hostile North, if we can make it ourselves fully as good and much cheaper than we buy it? L. HARPER.

University of Mississippi, December 22d, 1854. Geological and Agricultural Department.

Columbus Sent., Miss.

STEAM ENGINE AND BOILER HORSE POWER.

Amongst our earlier experiments, on a small scale, was one with a common furnace pot, or boiler, of cast iron, such as are usually set in kitchens, sometimes called a *copper*; it was capable of holding 18 or 20 gallons; the fire grate was 6 inches by 8, or one-third of a square foot in area, and the whole of the heating furnace exposed to the fire was about 3 square feet. Into this boilor was measured 2 cubic feet of water, which was made to boil, after which it was found that by feeding the furnace with coal and the boiler with water, and at the same time managing the draft of the chimney so as to keep the water boiling nearly at a uniform rate, the consumption of good coal is at the rate of 4½ lbs per hour, and the quantity of water boiled away in that time was exactly two gallons, or very nearly one-third of a cubic foot; the temperature of the water supplied to make up for the evaporation, being 62°.

As it is very common to reckon the evaporation of a cubic foot of water per hour as sufficient to furnish steam for one horse power, we have only to multiply each of the foregoing data by three to obtain the following proportion:

1 cubic foot of water evaporated per hour requires
9 sq. feet, or 1 square yard of heating surface,
1 square foot of surface of fire grate, and
13½ lbs. of good coal.

We thus obtain what may be called a rough estimate of a boiler of one-horse power, and with an expenditure of fuel approaching to what was formerly considered by the oldest disciples of the Boulton and Watt school, the proper though very ample allowance of 14 lbs. of coal per horse power, per hour.

This experiment, which was frequently repeated and verified in a variety of ways, was of course made with an open topped boiler, which induced me to make several other experiments with a variety of small closed boilers, more nearly assimilated to the condition of an ordinary steam boiler attached to an engine at work; the results were in all cases, whether under a pressure of 4 or 5 lbs. per square inch, or open to the pressure of the atmosphere alone, so nearly agreeing with the above, that, excepting increasing the quantity of water in the boiler, which increased the quantity of fuel used in getting up the steam, but at the same time lessened the other portion of the general consumption by lessening the difficulty of regulating the fire, the evaporation being steadier, there was no other alteration that materially affected the results as given above.

There is a remarkable coincidence in the figures expressing the dimensions of the apparatus and the effect produced in the above experiment, which renders it extremely convenient for forming a *unit measure* of steam boiler power; for we have only to conceive a vessel say a cube, for instance, of three feet square, or *a cubic yard* in capacity, with its lower side of *one square yard* in area, and exposed to the action of a fire on a grate of *one square foot* in area; let this vessel be nearly half filled with water, and then, after the steam is once got up, we have, by burning away 13 or 14 lbs. of coal in an hour, one cubic foot of water converted into steam, equal to the pressure of the atmosphere or a little above. This, if well applied, in a good Boulton and Watt engine, is well known to be at all times amply sufficient for one-horse power. It will do this even in a small short-stroke engine working without expansion, besides allowing various sources of waste and leakage from imperfect packing, etc.; but in larger and long-stroked engines, made to work to certain extent expansively by means of "Lap" on the valves or otherwise, and not loaded much beyond the nominal horse-power of the engine, as was the practice of the above celebrated firm for the last twenty years of its existence, the steam from a cubic foot of water usually produced an effect approaching more nearly to *one-and-a-half*-horse power, thereby reducing the above rate of consumption below 10 lbs, instead of 14 lbs. per nominal horse-power per hour. The entire mechanical force developed in the evaporation of a cubic foot of water is, however, much greater than this; but the above may be taken as the worst result obtained from the low pressure condensing engine throughout the cotton manufacturing district of Lancashire for the last quarter of a century, where the coal is generally of an inferior quality; and where, until within the last ten years, such engines, with steam not exceeding 6 lbs. or 7 lbs. per square inch above the atmosphere, and wagon boilers, were all but universal.

The measure of a steam engine horse's power, as originally settled by Mr. Watt, and to which both Farey, Tredgold, and all other engineers of eminence have agreed to refer, as a standard, is a power equal to lift 150 lbs. 220 feet high per minute, or, what is equivalent thereto, 33,000 lbs. raised one foot high in the same time. It may be remembered that this was no fanciful standard of Mr. Watt's, but really taken by him as the average power exerted by a mill-horse, traveling at the rate of 2½ miles an hour (or 220 feet a minute) and raising a weight of 150 lbs. by a rope, passing over a pulley, as appears by Mr. Watt's letter to Dr. Brewster, in the 2d volume of Dr. Robinson's Mechanical Philosophy, 1822. This standard horse-power of Mr. Watt's ought not to be departed from, it having the merit of great simplicity and convenience. *One hundred and fifty* pounds being exactly divisible by *six*, which is the effective pressure per *circular inch* on the pistou (nearly equal to 8 lbs. per square inch) considered most suitable for the best modern engines, working with little expansion, gives exactly 25, which is the number of circular inches per horse-power in Boulton and Watt's original 40-horse engines very nearly. Hence, a cylinder 5 inches diameter, (= 25 circular inches area), with an effective pressure of 6 lbs. per circular inch on a piston traveling at the rate of 220 feet a minute, will give out one horse-power.—*Weale's Series.*

Monetary and Commercial.

The week that has past, has been marked by no very important feature. Navigation is suspended in consequence of the ice, although the river is not frozen entirely over. Freight, therefore, is not moving on the river, and shipping is decidedly dull.

The payments due on the 1st, were generally met promptly. In one house, out of 43 notes, there were but three protests, and those inconsiderable. This is a gratifying state of things, as it shows our business men to be in a much more sound condition, than could have been expected.

Manufactures are beginning to operate to a limited extent, but use exttreme caution in making time sales, preferring in most instances to decline any but cash transactions.

In the money market we have to notico a better supply of capital. Strictly first class business paper is discounted at 10 to 12 per cent., other varieties range from 15 to 24; but there is a class of paper which is not discounted at any price.

There is a fair demand for exchange on the east. to meet obligations which are contracting for spring business. The stock of goods throughout the country being light, merchants will be compelled to purchase. We quote buying rates at ½ to ¾ per cent., selling at 1 per cent. Gold commands a premium of 1 to 1¼ per cent. Exchange on New Orleans continues scarce with a fair demand, and sells readily at ¾ to 1 per cent.

The stock market is gradually becoming easier, and returning to a more natural tone. Low-price stocks are in demand, indicating a disposition to embark to a limited extent in speculation.

At the East we have to quote a moderate demand for money at the rates of our former quotations, with a supply sufficient for legitimate business purposes. The banks are discounting freely for their customers. Loans on stock securities are quoted as readily negociable at 6 to 7 per cent., call loans and those at short sight at 6 to 8 per cent. In the street first class paper sells at 7 to 9 per cent. Second class in proportion. Sterling exchange ranges at 109 to 109¼. The bank statement shows a larger amount of specie on hand than heretofore, there being nearly $17,000,000.

With reference to the stock Market, Thompson's Reporter says:

"Stocks are without any material change in prices. The rise in exchange early in the week, with consequent apprehensions of specie shipments. was used by the *bears* to depress the market, but it has since recovered, and the general tone of the market is buoyant. State stocks are a trifle lower, owing to a temporaray falling off in the demand, rather than to any increased supply."

Sound, dividend paying stocks are in fair request for investment, and prices are firm. The Erie Railroad Company have paid off a great portion of their Income Bonds, and are ready to pay the balance as fast as presented.

GREAT INCREASE OF TRAFFIC. — The annual report of the English Railway Commissioners, for the half year ending June 30th, 1854, shows the following results, as compared with those of the previous year :

	Miles open.	Number of Passengers.	Receipts.
England and Wales	5,965	41,987,969	
Scotland	994	5,256,231	
Ireland	843	3,123,603	
For 6 mos. to June 30, '54	7,802	50,307,404	£9,424,603
Do. " 30, '53	7,512	45,080,316	8,191,183
Increase	290	5,227,088	£1,223,420

This shows a greater relative increase than any previous period in history of railroads.

SYNOPSIS OF TH TIMBER TRADE AT QUEBEC.

We had the pleasing duty of alluding to the increasing and prosperous trade of our port last year ; and we feel equal pleasure in recording another great increase this year ; but we fear it will not be attended with the same prosperous results as that of the last.

This year's business opened with very flattering prospects, our great staple—timber—commanded a high price in the English markets, and continued to do so for a considerable time after the business season had commenced. This state of the markets induced large speculative shipments to be made, and the consequent great demand for ships, run up freights from 52s. to 60s. for Timber, and £7 10s. to £8 10s. for Deals, and these rates were continued for some time, when a reaction took place in the English Markets and the price of timber began to recede and continued to that extent, as to stop its export, except it could be shipped at a mere nominal freight. The consequence was that freights fell at the close of the season to 22s. 6d. for Timber, and £3 10s. to £4 for Deals, and this in view of an exorbitant high price for labor, coupled with unusually high prices for provisions, which must have so increased the disbursements of ships as to cause heavy losses in many cases to the owners.

The total number of vessels, of all classes, from without the Province, which arrived here this year, was 1,563, forming 600,838 tons. Of that number 1,385 entered here ; and 178 passed on direct to Montreal.

The total number of vessels, of all classes, which arrived at Montreal this year, from without the Province, was 254, — forming 80,892 tons. 98 of these vessels returned to Quebec in ballast to load ; and 27 came down partly laden and completed their cargoes here.

166 of the above vessels were foreign, viz :

Norwegian	63	vessels	24,884 tons.
Prussian	18	"	7,084 "
German	7	"	2,652 "
Swedish	4	"	1,356 "
Austrian	1	"	195 "
French	2	"	455 "
Spanish	1	"	211 "
Portuguese	16	"	2,871 "
American	54	"	41,539 "
	166	"	78,447 "

Five of the above vessels were registered here as British.

34 foreign vessels, viz : 7 Norwegian and 27 American, forming 26,730 tons, loaded at the Saguenay, Father Point, and Cape Chat this year.

In addition to the above large amount of tonnage, there were built and registerd in Quebec during the year ending 1st inst. :—

43 square rigged vessels, forming			44,165 tons.
25 Schuoners		"	2,625 "
8 Steamers		"	518 "
76			47,308 "

Total number of vessels, of all classes, which cleared at this port during the past season, was 1,504—aggregate tonnage 664,345 tons.

A BREAK-NECK RAILROAD ARGUMENT.

Our friend and cotemporary of the Muscatine *Journal*, who visited our city last week, on his return homeward, was furnished with what he terms a break-neck argument in favor of the early completion of the Railroad connecting our two cities. He thus graphically describes his adventure :—

Tuesday afternoon as we jolted along in the stage toward Davenport, and noticed the crowd of laborers shoveling and carting, in the busy work of cutting through hills and raising a long line of embankment, we felt quite grateful for the prospect of a railroad in operation next summer. The opening of such a road would be a glorious celebration of the ever-glorious Fourth, and such a celebration may be confidently expected. As we passed on through a fertile region of country, already thickly dotted over with houses, surrounded by good prairie farms, we associated with that improvement a noble future for this country.

But it was on our return that we met with the most complete railroad argument. We were in one of two full coaches that left Davenport about 7 o'clock of a night, cloudy, foggy, and as dark as Egypt. The horses steamed so that the drivers could not see and the ground was extremely slippery. The drivers were very careful, drove in a walk most of the time, and stopping frequently, sent a light ahead to examine the road. We met a wagon load of pork in a ditch, which our coaches narrowly escaped, and the shouting in the dark backward and forward, was not only animating, but foreboding of harm to ourselves. We were three hours in going six miles. At last our coach, the hindmost, slipped on a sidling place, and just then striking a bridge, was whirled from it, turning a summerset, and striking on its top on the ground, about three feet below, and the top of the coach describing a circular movement of ten or fifteen feet. One got a bloody gash in his head, another a collar bone broken, and torn loose from his shoulder blade, and Judge Grant was severely injured in the shoulder, some of the muscles being probably jerked from their sockets. Another was got out raving like a maniac, ignorant of whence he came from, or whither he was going, or the name of his friend. A German named Hetzell was kind enough to take care of the wounded. Dr. Fountain, a skillful physician of Davenport, arrived about half-past four o'clock, in the morning, and attended to the wants of the invalids.—*Davenport Gazette.*

RAILROAD IRON.

I WOULD respectfully call the attention of Railroad Companies and Cuntractors to my facilities for

NOTCHING RAILROAD IRON

Suitable to be spiked in the Chairs. My Portable Punching Machines, for which I received Letters Patent, enablo me to make contracts for punching iron at a less price than can be done with any other Punching Macbine now in use.

Orders solicited, and work executed in any part of the United States. Address,

S. M'KENNA,
jan11.–tf. Box 705. Cincinnati P. O., Ohio.

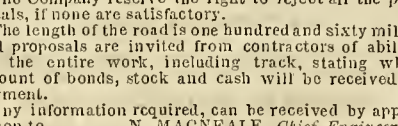
NOTICE TO CONTRACTORS.

Nashville & North-Western R. R.

PROPOSALS will be received at the Office of the Nashville and North-Western Railroad Company, for the Graduation and Masonry of said road, in sections of twenty or thirty miles.



The Company reserve the right to reject all the proposals, if none are satisfactory.

The length of the road is one hundred and sixty miles, and proposals are invited from contractors of ability for the entire work, including track, stating what amount of bonds, stock and cash will be received in payment.

Any information required, can be received by application to N. MACNEALE, *Chief Engineer.*

Nashville, Tenn., 25 Jan., 1855. febtolmy

Important to Railroad Companies, etc.

Leavitt's Railroad Frog-Points, Cast Steel Tools, etc.

THE undersigned, having discovered that cast steel, in a liquid state, can be moulded into any shape or form, are, by means of this valuable discovery, manufacturing

RAILROAD FROG-POINTS,

Lathe Mandrels, Guages

of every description for blacksmiths use; Steps for Mill Spindles and Shafting, Swage Hammers, and almost all the different variety of tools which are difficult to forge. Articles made in this manner, are much superior to forged productions, as the steel out of which they are manufactured, loses none of the carbonic element, but retains it in all its original purity, while under the repeated heats to which it is subjected by the old and tedious process, it loses much of this valuable property. They are also produced in a much more perfect state, needing little or no fitting or dressing, having all the accuracy of shape which moulded articles possess. They can, also, be furnished at one-half the cost of the others.

The qualities of the Frog points have been already tested by the Ohio and Mississippi Railroad Company, to whom the manufacturers are furnishing them through G. Recker & Co., Cincinnati.

Measures have been taken to secure a patent for this valuable invention. LEE & LEAVITT,
15 Walnut-st, Cin'ti.

N. B.—They would also call the attention of the public to their valuable and extensive assortment of cast steel saws, and circular saw mills, etc.

CINCINNATI STOCK SALES.

HEWSON & HOLMES,

Have constantly on hand and for sale at the Stock Board, Merchant's Exchange, and at private sale, Railroad, Bank, and Insurance Stock, and Railroad Bonds.

Regular sales at Stock Board on Wednesday and Saturday of each week.

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler	.....	Massachusetts
John E. Thayer, Esq.	.....	"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane, E. F. Osborne, Esq.	.....	Sandusky, Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	.....
" 14	..... $230
" 16	.....
" 18	 250
" 20	 275
" 22	 300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio, Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7551, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The followiug is an extract from a letter of William Brown, Esq., Springfield, Ohio. engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimbals and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

(On Baltimore & Ohio Railroad, midway between Baltimore and the Ohio River.)

MANUFACTURERS of *Engine Lathes, Planing Machines, Drill Presses, Hand Lathes, and other Machinists Tools.* These tools are built in a superior manner, from the very best materials, and are particularly adapted for railroad shops and all others repairing first rate machinery. Our location is very advantageous for shipping work to the West or South. Orders and communications receive prompt attention. Address

Cincinnati, O

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY.

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¼ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever. They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Johnockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

TO RAILROADS AND CONTRACTORS.

Horse Powers.—The undersigned being agents for the sale of R. H. Pease formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

GAS.

Aubin's Patent.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

T. WRIGHTSON & CO.,
167 Walnut-st., Cin'ti.

RAILROAD MAP.

WE have now ready A Railroad Map of the West, containing all the railroads constructing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a compete t hand.

The size of the sheet is 24 by 38 inches, and can be sent by mail.

Price—plain..... 40 cents.
Colored in outlines..... 50 cents.
Full colored ..... 75 cents.

Liberal discounts will be paid to those wishing them in quantities.

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to U. P. James will secure prompt attention

BY THE WAY OF THE

CINCINNATI, HAMILTON AND DAYTON, AND EATON & HAMILTON RAILROADS.

TO CHICAGO, in.....15 HOURS.
TO ST. LOUIS, in.....31 HOURS.

Passengers will find this the most pleasant route of any in the West, as it passes through the richest and most thickly settled portion of the State of Indiana. In taking this route, passengers will reach Terre Haute, Lafayette, Peru, Michigan City, Chicago, Rock Island, Galena and St. Louis, as soon as any other leaving Cincinnati, and with but little fatigue, in consequence of the superior manner in which the roads are constructed and managed.

THROUGH BY DAYLIGHT TO TERRE HAUTE, LAFAYETTE, PERU, &c.

Trains leave the Depot of the Cincinnati, Hamilton and Dayton Railroad as follows, viz:

First Train—Lightning Express at 6, A. M.

Second Train—Accommodation, at 2.15, P. M., connecting at Richmond with train for Hagerstown, Newcastle, &c., &c.

Third Train—Accommodation, at 5.20, P. M., for Richmond and intermediate points.

Returning, reach Cincinnati at 10, A. M. and 12 M. and 6, P. M.

Fare to Indianapolis.....$3 50
" Lafayette.....5 50
" Terre Haute.....5 75

For through tickets and information, please apply at the General Railroad Ticket Office, No. 169 Walnut-st., or to W. A. LATHAM, at Cincinnati, Hamilton and Dayton Railroad Office, corner of Broadway and Front streets, under the Spencer House, or at the Sixth-street Depot, JOHN W. SHIPLEY, Agent.

The Omnibus Line will call for passengers by leaving their orders at the offices.

WM. H. SMITH, Conductor.
feb. 8-1y D. M. MORROW, Superintendent.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York, And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

ASHCROFT'S METALLIC STEAM GAUGE.

(BOURDEN'S PATENT,

THE subscribers offer for sale this valuable Gauge. It is adapted to Locomotive and other steam boilers, indicating with accuracy the continual variations of steam within the boiler, enabling the Engineer to maintain a uniform and safe pressure. Any of the Eastern Railroads may be referred to for proof of its importance and value. BRIDGES & BROTHER,

sep.15-tf 64 Courtlandt St., New York.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal

RAILROAD EARNINGS.—We would again call the attention of Superintendents to the importance of regular and reliable reports of the earning of their respective roads, with comparative statements of the business of the present and past year. No good road need to fear the publication of its earnings; and this, if done with regularity, would do much to sustain the confidence of stockholders and the public in the soundness and safety of railroad investments.

RUNNING ARRANGEMENTS BALTIMORE AND OHIO RAILROAD.—Our readers and especially those who wish to travel east will find in their proper place in our advertising columns the advertisement of the Baltimore and Ohio and its connecting railroads. For freight or travel this road can compete favorably with any other.

A MAGNIFICENT SAFE.—We saw on Saturday last a magnificent Fire Proof Safe, of the manufacture of Hall & Dodds, of this city. It is designed for keeping the most costly articles of a Jewelry establishment, and is 7 feet 5 inches high, 5 feet 1 inch wide and 3 feet 2 inches deep. It looks as though it could defy the element. Messrs. Hall & Dodds have a well earned reputation. Their sales have stood the most severe accidental tests.

REVIEW—SUMMARY OF RAILROADS IN THE U. S.

Having given a review in detail of railways in the United States, we shall now give the general summary. Several accounts of railways have been given; but not one that we have seen is correct. Many unfinished lines have been put down as completed; and others, that are not undertaken at all, are set down, as in progress.

The following summary, both of aggregates and of the principal Lines is, as near correct, as it can be made. We shall give 1st. The aggregate by sections. 2. By States. 3. The CONTINUOUS *Trunks* through the U. States.

1. AGGREGATE.

	No. Roads.	Complete.	In Pro'ss.
Railways of the North and Middle 10 States	199	8,112 miles	2,076 miles.
Railways in the South, 6 States	62	3,456 "	2,201 "
Railways in the North-West, 6 States	115	6,248 "	6,433 "
Railways in the South-West, 8 States	59	952 "	5,423 "
Aggregate	435	18,845 "	16,133 "

We will compare this with two other statements published:

Hunt's Merchants Magazine	445	21,528	16,738
American Railroad Journal	——	19,438	——

The difference is, that the *Merchant's Magazine* has set down some roads, in the West, twice over, and thus made 500 miles in Ohio, and 800 in Illinois, and some in Indiana, as *complete* which are not in operation at all, or are twice stated.

2. AGGREGATE BY STATES.

	No. Roads.	Complete.	In Progress.
Maine	12	455 miles	91 miles.
N. Hamp. & Vermont	26	909 "	83 "
Massachusetts	42	1,135 "	67 "
Connecticut & R. I.	13	638 "	101 "
New York	32	2,504 "	575 "
New Jersey	10	457 "	—— "
Pennsylvania	62	2,218 "	1,118 "
Delaware	2	16 "	43 "
Maryland	6	240 "	—— "
Virginia	16	1,201 "	601 "
N. Carolina	8	344 "	360 "
S. Carolina	13	689 "	240 "
Georgia	15	982 "	460 "
Florida	4	—— "	560 "
Ohio	41	2,344 "	1,801 "
Indiana	26	1,388 "	1,413 "
Illinois	27	1,909 "	1,556 "
Michigan	7	434 "	200 "
Wisconsin	8	173 "	450 "
Iowa	5	—— "	983 "
Tennessee	17	290 "	1,164 "
Kentucky	12	190 "	641 "
Alabama	6	244 "	494 "
Mississippi	7	93 "	630 "
Louisiana	6	138 "	175 "
Missouri	5	60 "	895 "
Arkansas	2	—— "	410 "
Texas	4	—— "	940 "

The areas of the several great sections, and the proportion of *completed* railways within them are as follows:

	Surface.	Railways.	Ratio.
North & Middle	168,288 sq. m's	8,112 miles	1 to 21
South	180,437 "	3,456 "	1 to 53
North-West	290,259 "	6,248 "	1 to 47
South-West	579,895 "	952 "	1 to 580

There are certain interesting conclusions to be drawn from the above facts.

1. If all the railways really undertaken in the North-West are finished, *the whole will only equal, in proportion, the amount in the North and Middle section.* Hence, railways are not only, not overdone, in the north-west; but they cannot be for many years to come. And, we shall confidently leave events to prove, what we have often asserted, that the investment in the main lines of railway in the north-west, is *the most profitable investment which at this time can be made.*

2. If *six times* the amount of railways in the south-west is made, which now exists, it would then only be *equal to the proportion in the other parts of the South.* Hence, the railways undertaken in such states as Kentucky, Tennessee and Missouri, must ultimately prove very valuable.

3. It will require the construction of *eighty thousand miles of railway in the Valley of the Mississippi*, beyond what now exists, *to make the proportion equal to that in the Northern and Middle states;* and it will require two hundred and forty thousand miles, to make it equal to that of Massachusetts!

But, as the population of many of the states in the Valley is progressing with immense rapidity, it is very obvious they will soon require them; hence, railway construction must go on, and will soon progress as rapidly as ever.

3. MAIN LINES.

There are in the U. States five Main Lines, which pass from the Atlantic Slope into the interior, and constitute the most remarkable series of inter-communication on earth. They are as follows:

1. THE BOSTON LINE.—This line may be said to commence at Augusta, (capital of Maine), and proceed through Portland, Boston, Albany, Buffalo, Cleveland, Toledo, and Chicago, to St. Louis, as follows, viz:—

Augusta to Portland	60 miles.
Portland to Boston	105 "
Boston to Albany	200 "
Albany to Buffalo	301 "
Buffalo to Toledo	270 "
Toledo to Chicago	247 "
Chicago to St. Louis	285 "
Aggregate	1,468 "

Here is nearly *fifteen hundred miles of continuous railway* from East to West!

2. THE NEW YORK LINE.—This connects with the Western part of the former; but the special New York line may be stated thus:—

New York to Dunkirk	460 miles.
Dunkirk to Cleveland	142 "
Cleveland to Cincinnati	258 "
Cincinnati to Louisville	137 "
Aggregate	974 "

Here is another distinct line of about one thousand miles, from the city of New York to the falls of Ohio.

3. The Philadelphia Line.—

Philadelphia to Pittsburgh	353 miles.
Pittsburg to Crestline	187 "
Crestline to Indianapolis	206 "
Indianapolis to Terre Haute	76 "
Aggregate	822 "

Here are eight hundred miles of continuous railway connecting Philadelphia with Terre Haute on the Wabash, thence to St. Louis. It will be almost one thousand miles between Philadelphia and St. Louis.

Philadelphia will have two other Western lines, one by Marietta to Cincinnati; and one by the *Ohio and Indiana* line to Fort Wayne.

4. The Baltimore Line.—

Baltimore to Wheeling	380 miles.
Wheeling to Columbus	181 "
Columbus to Dayton	69 "
Dayton to Indianapolis	108 "
Indianapolis to La Fayette	73 "
Aggregate	811 "

West of Columbus, the Baltimore line may proceed to Cincinnati, to Louisville, to Terre Haute, or any other point.

The main Baltimore line will be through Parkersburgh by the North-Western, and the Marietta Road to Cincinnati.

5. The Southern Line.

Washington to Richmond	130 miles.
Richmond to Petersburg	22 "
Petersburg to Wilmington	226 "
Wilmington to Kingsville	171 "
Kingsville to Charleston	103 "
Charleston to Augusta	137 "
Augusta to Atlanta	171 "
Atlanta to Chattanooga	138 "
Aggregate	1,196 "

Here is another immense line of *twelve hundred miles*. The connections through Alabama and Louisiana are not yet completed; but when made, will bring this line up to two thousand miles. When the main northern and middle lines are completed to the western boundaries of Missouri and Iowa, as they soon will be, they will also be two thousand miles each, and then the U. States will be opened East and West, by vast lines of *chemin de fer*, to which there will exist no parrallels on earth. In the meantime, there must be full twenty thousand miles more; and beside these, thousands on thousands of miles of double track.

Notwithstanding the recent explosion of railroad bankers and depression of stocks, it is perfectly evident to discerning minds, that the amount of railway construction will not materially diminish for another generation; and that railway stocks must soon rise to their real value, which is quite as high, intrinsically, as that of any other species of property.

Alabama and Florida Railroad.—We learn from the Greenville Alabamian, that the work on this road has been commenced in earnest. A large force are already engaged on the line near Greenville.

CITIES OF THE WEST, NO. 5.—INDIANAPOLIS, IND.

Indianapolis is one of the most flourishing—perhaps, the largest town in Indiana. It is situated on the west Fork of White river; but has no navigation. It is in the midst of a great plain, which is the same extending from the Muskingum river to the Mississippi. On every side the eye wanders over an expanse of land, without meeting a single eminence. Indiana is yet a new state, and there is wanting there evidences of high culture, and adornment, which so much please the eye in older states. Indeed, the land round Indianapolis, cannot be said to be of the best quality. After ascending from the hills of the Ohio, and getting on to this great plain, the soil seems to be generally of the light clay character. The forests are heavy; but have few of those trees peculiar to rich ground. Notwithstanding this, the land is easily cultivated, and will, undoubtedly, produce good crops of small grain. In the midst of this plain has sprung up the City of Indianapolis; founded first by the State Government, and now boasts itself of being a "Railroad City." Its progress in population has been thus:—

In 1840	2,692
In 1850	8,091—200 per A'n.
In 1853	12,000— 50 "

Indianapolis will, probably, contain 22,000 inhabitants in 1860.

It is handsomely laid out, with a large *circular* public square, in the midst of which is a quadrangular house, built for the governor; but, which the governor does not inhabit, it being found too large and inconvenient. Around this circle, most of the churches and public buildings are erected. It has the disadvantage of placing the buildings on *diverging radii*, so that no two houses are parallel to one another; a sad defect in architectural appearance. The present boast of Indianapolis, seems to be the Union Depot,—a very large building erected for the accomodation of various railways. Of these, there are no less than EIGHT finished, and centering there, viz:—

Madison and Indianapolis	87 miles.
Jeffersonville	108 "
Terre Haute	73 "
La Fayette	64 "
Peru	73 "
Indianapolis and Bellefontaine	84 "
Central	108 "
Cincinnati and Indianapolis	110 "

These are so many *radii*, connecting Indianapolis with Cincinnati, Louisville, Madison, Terre Haute, Chicago, Dayton, and the Eastern Cities. The Indiana roads are very well managed; and it is quite cheering to pay a visit to Indianapolis, and see the cars departing and coming in every direction.

Indianapolis, however, is relying too much on railways, and too little on home industry. The *crossing* of roads may make a village; but cannot make a city without internal resources to support them.

TRADE BETWEEN THE LATITUDES.

Legitimate commerce is the exchange of the products of one country or climate for those of another differing in soil and adaptability. Now it will be seen at a glance that countries situated in the same latitude can only have fortuitous advantages for commerce, such as abundance of timber, peculiar adaptability to certain cereals, or superior skill in the mechanical arts, etc. These, it is true, furnish a lucrative basis of commerce, but a commerce which can extend *so* far and no farther. But with the different latitudes of our own and other countries the case is totally different. There must be an almost entire exchange of products; each varying degree of temperature brings with it a corresponding variation of agricultural productions—productions necessary to the comforts of the world. Thus, in our country, we have the sugar region, the cotton region, the tobacco region, the corn region, the wheat region, the potato region, etc., each of which, by its peculiar fitness for these products, renders the cultivation of them most profitable to the husbandman. Now the planter cannot live on cotton, and the northern farmer cannot clothe himself with wheat. Hence there must be exchange, and this is commerce. Where, then, are the natural channels of trade? and where should its artificial avenues be opened? The inference is easily drawn; just where the exchange will be the most profitable—and that is between the different latitudes.

Look for a moment at a map of our country; there spread out before you is nature's grand system of engineering. Consider the course of the St. Lawrence, the St. John's, the Penobscott, the Kennebec, the Connecticut, the Hudson, the Delaware, the Susquehanoa, the Potomac, the Mississippi, the Rio Grande, the Colorado, the Columbia; do they not flow mainly from the north to south, or diagonally across the different latitudes? And especially the greatest of them all, the Mississippi stretches from the sugar region of Louisiana almost to the farthest limits of the Irish potato. Surely this great system was not laid out, with all its branching streams, without some design to usefulness and applicability.

Turn now to Europe, view its great water sheds, and the direction of its streams, the Volga, the Don, the Dnieper, the Dniester, the Danube, the Vistula, the Rhine, and the Rhone, all embracing in their course, from five to fifteen degrees of latitude, and many of them running in a direction nearly due north and south.

Look now at Asia, its great rivers, the Lena, the Yenesei, the Obi, the Cambodia, the Irrawaddy, the Ganges, the Indus, and the Euphrates, all follow one general course from south to north, or north to south. The Hoang-ho and the Yang-tse-kiang being hardly exceptions to the principle, as the different

elevation of their summits affords them as great a variety of climate as though their whole course lay north and south.

In Africa the only two considerable streams, the Nile and the Niger, cross the latitudes. While in South America the Columbia and Orinoco, the St. Francisco and the Paraguay, follow, in their general course, a northerly and southerly direction; and the Amazon, which, in its main course, runs east and west, descends from the high lands of the Andes to the ocean, a difference of elevation equivalent to a very considerable difference of latitude. The Amazon, too, by its tributaries, drains a broad belt; the Branco, a branch of the Madeira branch of the Amazon, rises near the 20th parallel of south latitude, and near the head waters of the Pilcomayo branch of the Paraguay; and the Negro branch of the Amazon on the north, rises near the second degree of north latitude; hence the territory drained by this mighty stream stretches over twenty-two degrees of latitude. Comparing now the courses of the rivers of the world it will be seen to be a general rule, that *every* considerable stream *crosses* the *parallels of latitude*, that it takes in its course countries of varied products, due to the variations of climate, occasioned by difference of latitude; and that where there is an exception to this rule, the table lands along the stream afford the varieties of climate usually occasioned by differences of latitude. It has been found, by observation, that 400 feet of elevation occasion a difference of temperature equal to one degree of latitude; one mile, or 5280 feet of elevation, will make a difference of temperature equal to over *thirteen* degrees of latitude. Five miles, or the height of our highest mountains, will give a difference equal to *sixty-six* degrees of latitude. Hence it will be readily seen that the Amazon may pass through a region as varied in climate, soil, and productions as that of our own Mississippi.

Now, to apply the principle here laid down, to the internal improvement of our country. Does it not seem a necessary inference when we view the perfect system of engineering which nature has adopted for our guidance, that those roads are most necessary to the comfort and well-being of our people, which most conduce to the necessary exchange which must take place between north and south, and the intermediate sections. It is not mainly the competition between the labor and skill of the eastern farmer or manufacturer and his neighbor of the west, that will support an expensive system of railway improvements. Information and skill may soon be acquired, and competition assume the form of successful rivalry. But a trade based upon the differences which nature has placed between neighboring regions, is based on a foundation which art cannot undermine, and which agricultural skill and experience will only augment and increase.

Communications.

Editor Railroad Record:

Dear Sir: The remarks of the Editor, in the Railroad Advocate, of January 27, and communication in that of the 3d inst., relative to Boring Tools having horizontal face plates, have induced us to say a few words relative to their introduction into this part of the country, with a view of establishing for them an American origin.

If the opinion of traveling agents for the sale of English Tools, and operatives from English and American shops is sufficient evidence, then the fact can be established that they were first in use in the West.

In 1840, Mr. L. H. Corey, a member of our firm, designed and built a tool of this description, to swing seven feet, having the cross slide rut supported by, and moveable on, two cast iron uprights—the mandril having a horizontal and vertical motion with feed geer attached to the latter—the same cutter operating at any point in a diameter of seven feet.

In 1845, our business compelled us to build another, when we made an improvement, by which the mandril could be thrown from a vertical position so as to bore, or face off to any required bevel—with the vertical and horizontal feeds attached.

As early as 1845, a number of sketches had been taken of these tools by workmen in our employ, from different parts of the country, who expressed themselves satisfied that the tool was not in use elsewhere.

From long experience we are convinced they are the most useful tool we have in use, and judging from our sales of them to go to Louisville, St. Louis, Boston, New Orleans, and elsewhere, they are appreciated by others as highly as ourselves.

The demand for them is such, that we have found it necessary to get up patterns fur five different sizes.

Very truly yours,

NILES & CO.

Cincinnati, Feb. 13, 1855.

Racine and Mississippi R. R. Company.—At a meeting of the Stockholders of this Company, held at their office in this City, the following gentlemen were elected Directors for the ensuing year, viz:—

Henry S. Durand, Marshall M. Strong, Reuben M. Norton, Elisha Raymond, John Dickson, Charles Herrick, C S. Wright, City of Racine; Simeon D. Clough, of the Town of Racine; Edward Elderkin, Elkhorn, Walworth Co.; Wm. C. Allen, Delavan, Walworth Co.; John Williams, Darien, Walworth Co.; William T. Goodhue, Beloit, Rock Co.; F. W. Merrill, Rockton, Ill.

At a subsequent meeting of the Board, Henry S. Durand was unanimously re-elected President, A. J. Redburn, Secretary, and Marshall M. Strong, Esq., Attorney.

The annual report will be furnished to the Stockholders and public early next month.—*Racine Ad.*

Railroads.

LEXINGTON AND DANVILLE RAILROAD.

We are pleased to learn that this short but important work is now in a condition which will require but a small outlay to put the first section in running order. The character of the country, and the necessity of crossing the Kentucky river by a bridge, renders the road necessarily a somewhat expensive one, but the same circumstances also give it its importance, as it is mainly by this channel that we, of Cincinnati, and the North must seek a passage to the whole South. Hence it may not be unreasonable to expect that, when completed, it will do a large and lucrative business.

In a recent speech at Lexington, General Leslie Combs, the President of the Company, gave some highly interesting details of the condition of the work and the finances of the company. He stated, "that from an official report just made to him by the engineer of the company, the amount of money expended between Lexington and Nicholasville, (say 13½ miles,) was $80,314 14 for graduation and masonry; $104,000 for iron rails, besides chairs, spikes, and cross-ties, now ready to be laid down; and for the right of way, 66 2-3 feet wide, and stations, an average of $1200 per mile—equal to $16,200. Total amount actually paid, $200,514 14. Several thousand dollars had also been advanced to a responsible contractor for building depots, offices, etc., which would, no doubt, be constructed as soon as needed.

"To complete the graduation and masonry to Nicholasville would require less than forty thousand dollars, at present contract prices; and laying down the rails and distributing materials could be done for $500 per mile—say $6,750. Total, $46,750. Not one-fourth as much as had already been expended.

"From Nicholasville to the Kentucky river—8½ miles—there had been expended for graduation, masonry, tunneling, $85,676 94; for right of way, water-stations, etc., an average of $1200 per mile, equal to $10,200—total, $95,876 94. In additiun to which nearly all the cross-ties were already on the line, ready to be laid down.

"The engineer is confident from actual measurements and accurate estimates, that the remaining graduation, masonry, and laying down the rails from Nicholasville to the Kentucky river, can all be done for less than fifty thousand dollars."

Too much credit cannot be given to Gen. Combs for the energy and ability with which he has carried the road through difficulties which would have sunk, under any other management, almost any road in the country. It is due entirely to his tact and perseverance that the company are now entirely free from debt.

REPORT OF THE INDIANAPOLIS AND CINCINNATI RAILROAD CO.

We have been favored with the Semi-Annual Report of this flourishing Company for the six months ending Jan. 1st, 1855. The following is the summary of the receipts and expenditures :—

	For Passengers.	For Freight.	Total.
In July	$ 8,036 79	$ 7,803 83	$15,840 62
In August	13,227 39	12,514 94	25,742 33
In September	16,089 44	15,021 90	31,111 34
In October	18,557 88	14,824 35	33,382 23
In November	20,735 13	16,666 38	37,401 51
In December	13,836 60	17,912 37	31,748 97
Total	$90,481 23	$84,743 77	$175,225 00

To which add for transportation of Mail $3,384 37
For transportation of Express 957 55

Makes total receipts for transportation $179,566 92
Total expenses on account of transportation being about 46¾ per cent. of gross earnings 83,469 79

Net receipts for six months $96,097 13
From which deduct interest for 6 months on 1st and 2d Mortgage Bonds $29,750 00
Also, interest 6 months on Income Bonds 8,900 00 38,650 00

Will leave applicable to dividends $57,447 13

Being a little over 4 7-10ths per cent. on Capital Stock.

Total number of Through Passengers for six months 23,609
Total number of Way Passengers for 6 months 41,025

Total number of Through and Way Passengers 64,635
Average distance traveled by each passenger, 53 1-10 miles 415
Average number of passengers per day $580 00
Average receipts for passengers per day 4,990
Number of tons of Through Freight carried westward 4,737
Number of tons of Way Freight carried westward 10,319
Number of tons of Through Freight carried Eastward 12,845
Number of Tons of Way Freight carried Eastward 9,727
Total tonnage Westward 23,164
" " Eastward .....
Total receipts for Westward Freight $39,427 87
" " " Eastward " 45,315 90
Average tonnage per day 210¾
Average Freight receipts per day $543 21

In the exhibit made to the Stockholders on the first of July last, of the operations of the road for the seven months ending the first of July, the receipts on account of transportation during that time were $145,917 80
Add receipts from July to Jan. 1st, as above. 179,566 92

Makes the receipts for the first thirteen months, since the road has been opened. $325,514 72
Gross receipts per mile 3,616 83
Cost of Road and Equipments per mile 24,205 21
The net Earnings for the first seven months, after paying interest on Bonds, was 41,809 24
Add net Earnings for last six months 57,447 13

Makes Total net Receipts $99,256 37
Being over 8 1-10th per cent. on the Capital Stock.

Although the receipts during the past year have exceeded our anticipations, yet from several causes they have fallen short of what would have been realized under ordinary circumstances. The general failure of the wheat and corn crops along the line of the road, the unusual low stage of the Ohio river for the last eight months, and the decrease in the number of hogs usually shipped to the Cincinnati market from this section of the State, have all contributed to diminish our revenues. If the crops of the next season are as good as they generally are, I think we may fairly calculate that the receipts of the Road will be increased from 15 to 20 per ceut. over those of the present year.

Since the report made in July, suitable freight and passenger houses have been erected at Lawrenceburg and Shelbyville, which, with those heretofore built at Greensburg and Indianapolis, make the depot accomodations sufficient for a large increase over the present business of the road. At Indianapolis, an Engine House and Repair Shops have been completed sufficient for the services of the Road.

The Road is well provided with Water Stations, and the track is in good repair, having been thoroughly ballasted with gravel throughout its whole extent, except for about eight miles, which will require an additional coat of gravel in the Spring.

The movement of the trains upon the Road has been conducted with remarkable promptness and care, no serious injury having yet occurred to the machinery, and none whatever to a passenger.

At a meeting of the Board held at Indianapolis, January 15th and 16th, the following Report from the Committee on the subject of Dividends, was made by Vachel Worthington, Esq., and approved by the Board :

The Committee on dividends beg leave to present the following Report and Resolution for adoption :—

It will be perceived from the Report of the President that the net earnings of the Road up to the first of January, 1855, amount to $99,256 37; equal to 8 1-10 per cent. upon the Company's capital stock paid up. To these earnings the stockholders are justly entitled, in some form or other. It should be given to them in cash, and if not so given, some good reason should be assigned for it.

The Report of the Treasurer shows the cost for the construction of the Road to be $1,772,013 00. The cost of the lands reserved for the use of the Company $63,275 00. The cost of Road Equipments, $343,181 61. The stock account, $1,213,723 38. Bonds due in 1866, $500,000 00 ; and in 1862, $350,000 00 ; and due in 1867, $8,000 00, bearing interest at 7 per cent. per annum ; and income bonds due in 1857, $170,360 00 ; and real estate bonds due in 1858, $200,000 00, bearing interest at 10 per cent per annum. The floating debt amounts to $194,498 66 ; while bills receivable amount to $129,226 89, and real estate, not needed for the uses of the road, is estimated at $299,466 00.

The floating debt properly belongs to the construction account, and inasmuch as bills receivable and real estate cannot be made available to discharge it, at present, nor the stock account enlarged, nor a funded debt raised, except at a great sacrifice, there has been, and can be, no other alternative, but to apply the net cash earnings to that purpose, and divide, among the stockholders, an equivalent in some other shape.

It is the undoubted right of the stockholders to have the just earnings of their property, if practicable, in cash ; but the rights of creditors are still higher, and must be provided for. We therefore recommend the net earnings of the Road, and the proceeds of the real estate, and bills receivable, not otherwise pledged, to be applied to discharge the floating debt, until the same be fully paid, and, in the meantime, that bonded dividends be declared half yearly.

It will be perceived the ten per cent. bonds fall due in two years, and a portion of the 7 per cent. bonds in seven years ; it is, therefore, advisable that the dividend bonds be thrown forward to suit the convenience of the Company. We, therefore, recommend they be made payable in ten years, hearing interest at the rate of seven per cent. per annum, both principal and interest payable in New York.

Your committee believe it to be the true policy of the Company not to divide over eight per cent. per annum, until the floating debt be discharged, and its finances become perfectly easy, and they doubt not the net earnings for the year 1855 and thereafter will justify at least that dividend. The net profits for 1854 will be subject to taxes for that year not yet paid. They, therefore, recommend the adoption of the following :

Resolved, That a dividend be made among the stockholders of seven per cent. upon the capital stock paid up in full, from the net earnings up to the first day of January, 1855, in dividend bonds, payable on the first day of January, 1865, bearing interest at the rate of seven per cent. per annum, payable half-yearly, on the first days of July and January of each year ; principal and interest payable at the Office of the Ohio Life Insurance and Trust Company, in the City of New York; and that the President and Secretary cause said bonds to be prepared and to be executed by them on behalf of the Company, and ready for delivery to the stockholders, at the Company's office at Indianapolis, and its transfer office in the City of New York, upon demand, on and after the 15th of February, 1855, in such form and for such amounts, as they may deem most advisable.

THE PUBLIC WORKS OF PENNSYLVANIA.

ANNUAL REPORT OF CANAL COMMISSIONERS.—We are indebted to several attentive friends at Harrisburg, for copies of the Annual Report of the Canal Commissioners. It is quite a voluminous document, but the following are the principal facts:—

The fiscal year terminated on the 30th of November, and the receipts for tolls amounted to $1,876,078. The expenditures to $1,101,570. Gross revenue $774,508. Increase of nett receipts over 1853, $102,172.

Whilst the gross receipts from the Delaware, Susquehanna and North and West Branch divissions have increased $137,901.30, the main line of canal and railroad from Philadelphia to Pittsburg has fallen off as compared with 1853, $195,312.33,

This falling off of revenue from the main line isattributable to five causes, viz :

1st. In 1853 the tolls paid by the Pennsylvania railroad company for the transportation of its freight over the Allegheny Portage Railroad amounted to $213,000. On the 15th of February last, on the completion of its own road over the mountain, the company withdrew its business from the State road. That source of revenue consequently ceased after the first two and a half months of the last fiscal year. The withdrawal of this business will alone account, independently of other causes, for nearly the whole falling off in revenue from the main line.

2d. The unprecedentedly long period of low water in the Ohio and its tributaries, caused an almost entire suspension of transportation to and from the commercial points, on those streams. They are the principle feeders to our main line, and every thing which affects the communication with them, must necessarily have a deleterious tendency upon the receipts from the public works. This low water commenced early in the summer, and continued, almost uninteruptedly, to the close of canal navigation.

3d. The drouth which so materially injured the growing crops in portions of our own State, affected the local receipts at every office on the main line.

4th. On the 26th of September last, the aqueduct over the Allegheny river, near Freeport, gave way and was entirely destroyed rendering one hundred and four miles of the canal nearly useless until the 8th day of November, a period of six weeks. During this interval, in addition to the loss on the local business, the board were compelled, to preserve the through trade, to enter into the arrangement, notice in another part of this report, with the Pennsylvania Railroad Company, securing to the through transporters, the right of passing their cars and freights over that company's road between Conemaugh station and Pittsburg, at the same rate of tolls that that company paid to the State for an equal distance over the Philadelphia and Columbia Railroad, in addition to the tonnage tax. In making this arrangement, it became, as a matter of course, necessary to

lower the then existing tolls on through goods, so as to enable the transporters to meet their proper proportion of the extra expense thus incurred in consequence of their inability to use the Western division.

5th. In establishing the toll sheet at the commencement of the year, the board were compelled, by the low rates at which through goods were carried by the various competing lines, to make large reductions in the tariff of tolls. If this course had not been adopted, a loss of revenue must have been the inevitable result, as the several rival railroad lines were determined, as recent circumstances have shown, to secure the carrying trade to their respective roads, even at a loss to the stockholders who had invested capital in the hope of receiving a remunerating interest.

These may be regarded as the principle causes of the falling off of the revenue from the main line. Compared with the increase in the receipts from the New York State canals, our own lines present a favorable result. It is estimated that the deficiency in the revenue from the New York canal will exceed four hundred thousand dollars, while the decrease in the gross receipts from the Pennsylvania line of improvements amount to only $57,121 03.

There is now a probability that the necessity for a low rate of tolls which prevailed during the last fiscal year, may, for the future be obviated.

The receipts and expenditures for the year constitute the sum and substance of the report, and we therefore give them in detail:

RECEIPTS FOR ALL PURPOSES.

Columbia Railroad.

Philadelphia	$432,076 41
Paoli,	24,762 22
Parkesburg,	43,332 24
Lancaster,	58,484 61
Columbia,	362,869 29
	821,524 77

Portage Railroad.

Hollidaysburg,	$41,485 97
Johnstown,	36,539 80
	$78,025 77

Main Line of Canal.

Columbia, (including out-let lock),	$84,940 00
Portsmouth,	30,917 94
Harrisburg,	24,251 51
Newport,	5,008 54
Lewistown,	8,741 81
Huntingdon,	6,568 58
Hollidaysburg,	27,717 77
Johnstown,	1,651 83
Blairsville,	3,080 60
Freeport,	2,521 48
Pittsburgh,	81,275 08
Out-Let Lock at Portsmouth,	1,357 45
Clark's Ferry Bridge,	1,112 85
Freeport aqueduct,	223 03
Juniata aqueduct,	90 56
	$279,459 63

Delaware Division.

Easton,	$319,362 63
New Hope,	29,563 41
Bristol,	26,401 02
	$365,327 07

West and North Branch and Susquehanna Divisions.

Dunnsburg,	$28,063 52
Williamsport,	30,267 38
Northumberland,	35,537 14
Beach Haven,	214,216 50
Liverpool,	28,657 10
	331,741 64
Total receipts,	$1,876,078 88

EXPENDITURES.

For maintaining motive power on the Philadelphia and Columbia Railroad, exclusive of the purchase of locomotive power,	$300,276 98
For repairs on the Philadelphia and Columbia Railroad,	77,933 93
For collectors, weigh-masters, Inspectors, and incidental expenses of their offices,	12,550 86
	390,761 77
For maintaining motive power on the Allegheny Portage Railroad, including the management and repairs of State trucks and the purchase of ropes,	261,185 03
For repairs,	61,415 56
For collectors, weigh-masters, inspectors, and incidental expenses of their office,	3,311 07
For use of Pennsylvania Railroad,	12,500 00
	338,391 66
For ordinary repairs on main line of canal,	138,429 66
For breaches,	25,603 08
For road and farm bridges,	4,791 75
For lock-keepers,	29,165 00
For collectors, weigh-masters, and incidental expenses of their offices,	18,725 81
	216,714 70
For repairs on Dolaware division,	31,383 66
For breaches,	16,158 20
For lock-keepers,	6,376 00
For collectors, weigh-masters, inspectors, and incidental expenses of their offices,	5,053 16
For road and farm bridges,	907 16
	59,878 07
For repairs on Susquehanna division,	20,804 94
For bridges on do.	875 00
For Kepairs on West Branch division,	15,935 34
For breaches on do.	3,248 14
For bridges on do.	2,371 16
For repairs on lower North Branch division,	31,605 47
For breaches on do.	3,988 74
For bridges on do.	1,699 63
For lock keepers,	7,046 00
For collectors, weigh-masters, inspecors, and incidental expenses of their offices	8,249 92
	95,824 34
Total expenses,	1,101,570 54
Receipts over expenses,	774,508 34

NOTE.—If to this sum be added the tonnage tax from the Pennsylvania and the Lancaster and Harrisburg railroad companies, amounting to $141,935 24, the net revenue for the year would be $916,438 58.

The following in relation to the Philadelphia and Columbia Railroad will be read with interest:

The cost of carrying a passenger in 1854, was sixty-two cents, being six and one-half cents more than the cost in 1853. This increase is accounted for by the fact that in 1853 the through passenger was calculated to and from Dillerville, seventy miles, and in the statements for 1854 to and from Columbia, eighty-one miles. Besides, in 1854, an additional train was put on the road for the accommodation of the public, which has not been long enough established to insure the anticipated increase in the through travel.

In 1853, the cost of transporting a ton of freight was sixty-six cents and six mills for the whole distance from Philadelphia to Columbia, or eight and one-fourth mills per mile. In 1854 it was seventy-six and one-half cents for the whole distance, or nine and three-eighth mills per mile.

It will be seen by the report of the Superintendent, that the increase in the tonnage is eleven per cent. over 1853, and that the increase in the motive power expenses of the road is twenty-one per cent. This last mentioned increase was caused by the rise in the price of fuel, labor and materials, and the putting on of an additional passenger train.

A comparative statement of the business for 1854 and 1853 exhibits the following results:

Year.	Trips made by locomotives.	No. cars carried.	Tons of cl'd freight carrried.	Cost of motive power proper.
1854,	10,332	178,393	437,238	$291,961 47
1853,	9,571	169,650	394,251	241,152 81
Increase,	761	8,743	42,987	50,808 66

In every branch of the motive power department of the road, the business has been conducted with unremitting attention to the safety of the traveler, and to the dispatch of freight. It is doubted whether any railroad in the United States, of the same length, and doing the same amount of business, is managed with more skill, energy and economy, than the Philadelphia and Columbia railroad. But one death has occurred during the year, where the passenger observed the precaution to maintain a seat in the car, and that resulted from the breaking of an axle after the car had run off the track. In respect to freedom from destruction of life, this road may safely challenge comparison with any railroad of similar extent. Since the introduction of motive power, in 1834, so far as can be ascertained, only three passengers have been killed, who maintained their positions in the cars. When the large number of persons who have been conveyed over the road, in the last twenty years, is taken into consideration this result will no doubt surprise many who have been deluded by the croakings of those who are constantly endeavoring to decry the management of this important link in the chain of our internal improvements.

The Report concludes with this language:

"In their last report, the Board estimated the gross receipts for 1854, at $2,100,000. Had the upper division of the North Branch canal been brought into use, as was then confidently expected, it is not now doubted but that it would have reached that sum, notwithstanding the Board, in order to enable the transporters to keep on the main line at all, were obliged to reduce the tolls to a lower point than they anticipated at the time the report was made. When it is remembered that the finished portion of the North Branch canal is but seventy-three miles in length; that the principal tonnage carried over it is coal; that the tolls at Beach Haven office amounted to $214,216 the present year; that that portion not yet brought into use is ninety-five miles, and that it would afford an outlet for coal to a large and populous portion of our own State, as well as a vast number of the citizens of our sister State, New York, and of the country bordering on the neighboring lakes, and that we would receive in exchange from that State, salt, plaster, grain, &c., &c., it is not perceived why the receipts of the latter should not exceed those of the former so soon as the new portion shall have been brought into successful operation. Should this be accomplished by the early part of the approaching summer, the Board have entire confidence, that with the increased receipts on the now finished lines, which will result from the contemplated modifications of the toll sheet, the gross revenue from our public works will amount the coming year, to two millions two hundred thousand dollars.

Various official documents are given, most of which, however, have already appeared in our columns.

SANDUSKY, MANSFIELD, AND NEWARK RAILROAD.

The New Board of Directors of the Sandusky, Mansfield, and Newark Railroad Company held a meeting in Mansfield, on Friday last, and elected the following officers for the coming year:

President—W. H. Stockwell, of Cin.
Vice President—J. Purdy, of Mansfield.
Secretary—J. W. Sprague, of Huron.
Treasurer—E. G. Woodward, Mt. Vernon.
Acting do.—A. G. Marshal, Sandusky.

John R. Robinson, Esq. was reappointed to the Superintendency of the Road, which will be highly gratifying to the business men of the whole line, as it is to ourself, for we know of no man who could fill this responsible and arduous position so well as Mr. Robinson, or who combines the business qualifications far-sightedness, and enterprise which so eminently characterize and fit him for its superintendence. Mr. Robinson had much to surmount when he first undertook the control of the Road; but he has proven himself equal to the task, and the past is a surety for the future in pushing forward its interests and necessarily the interests of those having business with it.—*Mansfield Banner.*

READING RAILROAD.—The local receipts on the Reading Railroad for the last year were $3,781,639 91.

COMPARATIVE SAFETY OF ENGLISH AND AMERICAN RAILWAYS.

It is probably well known that accidents on American railways, in proportion to the number travelling, are three times as frequent as in England, and nine times as frequent as in Prussia, while with us the speed is not so high. One very great safeguard, which should never be omitted in any railway system, is this: Throughout Great Britain a competent person, an "inspector," traverses every foot of the railway track once a day. Working hands are under his control, and all indications of danger—a bolt starting out, sleepers settling, rails fractured—are at once repaired. Each inspector has a certain distance to look over. The effect of storms, washing up of the track, fallen trees or rocks, obstructions placed by malicious persons, are all guarded against as far as practical. A track often gets gradually out of repair, and the first indication we have of it is, a train "runs off," and another casuality is added to the long chapter of accidents "where nobody is to blame." Can it not be perceived that life and property with us would be far more safe with such a system of daily inspection? Some roads have them; but many do not. Inspection and superintendence cost money, but often one single accident will be of more pecuniary damage to a company than would arise from employing a hundred extra hands, with good salaries. All employed persons, too, should be held, to a strict personal accountability in case of accidents. If this were the case we should see fewer casualities, and imprisonment for manslaughter would often follow, instead of the only punishment now frequently meted out to a culpable person, and recorded in the brief sentence: "The company discharged him."—*Am. Quar. Review.*

Miscellaneous.

AMERICAN WOODS FOR MACHINES.

Each species of wood has some superior value for certain uses. It is not possible to define the adaptedness of wood under all circumstances for machine or other purposes, as the growth of the timber gives various qualities. We purpose to give the leading characteristics, by a knowledge of which, with a little experience, a workman may make judicious choice of appropriate woods. The various species used in the temporate zone exhibit a similarity of structure, and are influenced in a great measure by the same general laws affecting the growth, strength and decay of their fibres. Of the concentric layers the heart or central portion is the hardest and most compact. From the heart to the exterior, the layers become more open in texture, and that portion the lightest in color enclosing the heart, is called alburnum or sap wood, which in some species never makes sound timber, but tends to decay, from the fermentation of the sap it contains, and the imperfect formation of the woody fibre. Unless the bark and sap wood are removed from choice timber, their decay starts the decomposition of the heart wood, which when once commenced cannot be thoroughly stayed without resort to strong chemical agencies. Sap wood is also more subject to the attack of worms, insects and molesusca, as the borers of salt water. Woods used in machines, are termed either *hard*, *soft*, *resinous*, or *exotic*; though the gradations, of character are such as to make it difficult to classify them specifically.

Certain species of the bark are most valuable for all purposes requiring great strength and stability, and for resisting the influences of changeable heat and moisture. Heat and moisture are the usual causes of decay. The White and Live Oaks are the best of the American species, and the Red Canada is the only other species deemed of much value compared with other woods. For unyielding frame work, great strength, and durability, in wet positions the White and Live Oaks are the best of all American timbers; and choice trees from good positions, will afford as good wood as any in the world. To secure the greatest value to this wood, by a short process of seasoning, it should be entirely freed of the sap wood, immersed in a running stream for a month, to wash out the fermentable sap, and then allowed four to six weeks for drying, that the shrinkage may not be so hasty as to produce serious cracks. Steaming woods instead of seasoning tends to weaken the cohesion of the woody fibres, but may allow a uniform texture if judiciously managed. These remarks apply to any variety of wood.

Next to the Oak, of the woods of American growth, adapted to machines, is the White Walnut or Hickory, and is especially useful where elasticity is required, or for curvilinear forms,—which may be had by steaming and drying it confined to the shape desired, as for sleigh runners. The same process may be applied to Ash wood, which being more easily worked for joints and surfaces is generally preferred, though more liable to decay in tenon joints. The elasticity of these woods fit them for bearing strains, where yielding is allowable, as for carriage axles and bodies, agricultural machines, and for the frame work of many other machines.

The European Elms rank nearly equal to our best Oaks for machinery, but the American species are of a more open texture, and less durable, particularly those grown in swampy soils. Selected timber from Elms grown in dry positions, is firmer and more durable, but it is all highly prized for some purposes as it is not liable to split even when roughly used. It is useful for strength in irregular shapes, and for allowing the passage of bolts, screws and nails. All our Elms tend to twist and warp in seasoning which is proportioned to the texture of the fibre, depending upon the soil and speed of growth.

Beech wood possesses great toughness, and the closeness of its grain adapts it for tools and helves. It is prized for forge hammer helves. Iron in proximity to this wood is corroded, there should therefore be a coating to the iron of boiled oil or paint. Pieces that will bear it and of small size, should be heated to redness and immersed in the oil.

Maple wood in general makes strong frame work. The Bird's Eye Maple is tough, firm, fine grained wood mostly used in cabinet work. The common Maple is easily worked, and its texture adapts it to callender and press rolls. Its general features are allied to the Sycamore, or Buttontree, the wood of which is softer than Beech, but close grained. It makes good screws, and may be used for like purposes, and turning in general.

Locust Tree wood is adapted specially for tree nails and like purposes, on account of its toughness. It is used extensively in shipbuilding.

Dog wood is tougher than Locust, and is used for the same purposes, but is in insufficient quantities, of less size and not as easily wrought.

Birch is a fine grained wood, suitable for turning.

The Holly, abundant in Western Virginia, is very fine grained wood, suited for turning, inlaying and veneering. It is comparatively small, and requires nice treatment to prepare it for use.

The Horse Chesnut and Buck Eye woods are of a similar character to the Holly, not so close grained, but furnish large pieces.

There are other hard woods in America in abundance, but these we have noted are the principle species, and embrace those of special adaptability to machinery. The leading features of Chesnut, Cedar, and Black Walnut, are well known, though not much used in machinery, save as with Chesnut and Cedar they are used to resist influences of moisture, for which they are almost equal to White Oak. The Chesnut will not make a strong frame work, and the Cedar is not obtained in sufficient quantity or in large pieces. The Black Walnut is used more for its color and the finish it takes for furniture. For strong carved work, Cedar is esteemed most highly. For patterns and light carving, Linden is adapted, as it does not split easily. Of the light woods, Linden is one of the most valuable, for the facility with which it may be worked in all directions.

Poplar is soft and light and easily carved, but will not bear much exposure to wear.

Plane tree, Buttonwood, or Cottonwood, very abundant in the Mississippi Valley, is a light, open textured wood.

There are three species of the Pine having peculiar qualities for machines,—the White, Northern Yellow, and Southern Pitch Pine. These two last make excellent ship timber, and strong and durable frame work for any purpose. They will resist a great amount of wear, and make durable floors. The White Pine affords the greatest support for a given weight of any of the timbers used.

Cypress.—There is no wood that resists decay more effectually than Cypress under the same circumstances. It is mostly used for shingles.

Of the quality of wood, as to age and condition, a knowledge can only be obtained by observation. Wood that has begun to decay, either before or since being cut, loses its adherent pliability, and glossy smoothness. Each species of wood is affected differently under treatment, even under the same circumstances, and decay may be induced by various causes. Storms may rupture the fibres of a tree and produce shakey timber, which is likely in its course to induce a tendency to decay, beside weakening the wood for use. Decay induced by broken limbs, the boring of insects, blight from drought,—all seriously impair the quality of wood. The judgment exercised in respect to each piece as used, is the only sure test, for the eye soon learns to discover defective quality. As a general rule every species of wood grown upon high situations, is firmer in texture than that produced in wet places; and trees of slow growth afford tougher wood than fast grown. Medium sized trees, according to the species, afford the most durable woods. Very large trees have their heart wood with less sap than is essential to a healthy strength, and young trees have too much sap wood. Timber should be cut at that season when there is least sap in it. Beside the extra moisture of sap, it contains a proportion of mucilage, sugar and starch, these naturally tend to fermentation when deprived of the controlling influence of life in the wood, and consequently wood cut while full of sap, tends to decay. When the sap first falls it leaves through the alburnum a portion of starch, which is consumed in sustaining a degree of warmth in the tree during winter. It follows from these facts, as from experience, that timber should be cut at the latter part of midwinter, before the influences of spring have any effect, to secure the wood in its strongest and most durable condition.

Seasoning by artificial means, as a general rule, impairs the quality of timber, yet it is highly probable that a good process discreetly managed, may more than make amends, for there are chances of accidents to stored wood. There is a tendency for all fluids to exchange positions by mixing, even though it be essential to pass through substances deemed impermeable, as bladder skins; so likewise is there a determination for the sap of a tree, when immersed to be replaced by water, and that further replaced until it finds no soluble portions to take up. A running stream exerts a far more speedy influence, when the butt is upwards, the value of this point may be illustrated in the difference of decay in posts, whether the larger or smaller end be planted in the earth. Sap or water traverses from the butt to the smaller end of the log far more readily than the reverse. There is a force in a running stream, which estimated by the time it exerts its influence upon a log, is probably of as great value as in the tendency to solution above referred to.

Nearly all the scientific works published in America, treating upon the elements of machines, have based their explanations upon the natural history of the woods in Europe—taking these principles from the same sources as those pertaining to mathematics. This leads us to great errors and misunderstanding of the work, for there is a great difference in the species of wood bearing the same name in Europe and America. For instance, there is nearly as great difference between European Elms and our common species, as there is between our common Elm and Linden.—*Mining Chronicle.*

Monetary and Commercial.

The great feature of the week is the prospect of a speedy resumption of navigation, which has been suspended in consequence of ice in the river. We have had a severe rain storm, accompanied with warm weather, and the ice is moving off. Many predicted a great rise, but we have not heard of sufficient thaw at the head waters to warrant the belief.

The absolute stagnation of business, occasioned by a stoppage of navigation, is an excellent commentary on our railroad policy. We have many railroads running East to connect us with the great commercial marts of the Atlantic coast, but *not one* as yet to connect us with the great cities of the South and South-West. Here we think a great mistake has been made. We should have a passage to the East, unquestionably, and such a passage is profitable to us; but it is far more profitable to the Eastern cities than it is to us. Their interest lies with us; ours with those west and south of us. It would do well for Cincinnati to adopt the plan pursued by others, and take most interest in the roads which will open a market for her wares, and bring to her the material to supply the wants of her legitimate circle of trade.

The money market exhibits no material change from our last quotations, strictly first class paper sells readily at 10 to 12 per cent., and other varieties at whatever rate the drawer is forced to give.

The market for eastern exchange has not been very active, we quote it buying at ½ and selling at ¾ per cent. premium. Exchange on New Orleans is scarce, and sells at from ¼ to 1 per cent premium.

The stock market begins to exhibit signs of firmness. A month or two ago, when stock was offered for sale, the shrewdest could not foretell at what price it would be sold; but now there is getting to be a fixed value to stocks and bonds, below which holders will not part with them.

There is no new feature to notice in our advices from the East, the principal feature in the money market being continued ease and the absence of the pressing demand noticed throughout the fall.

Our usual reports from New York have not reached us this week, we presume, in consequence of the state of the roads.

* NOTE.—It is probable that the operation of the Reciprocity Treaty has effected a diminution in the total collections of not less than £2,751 17s. 7d.

FOX AND WISCONSIN IMPROVEMENT.

We find in the last Green Bay Advocate the Second Annual Report of Messrs. M. L. Martin, and U. H. Peak, Committee of the Directors, to the stockholders of the Fox and Wisconsin Rivers Improvement Company. It is an interesting statement, and must be entirely satisfactory to the stockholders to whom it is especially addressed, as well as to the public at large who take a lively interest in this important enterprise. We learn from the report that the company have bent all their energies during the past year, to the improvement of the Lower Fox River, and with such success, that the work is almost completed, and will be ready for use by the opening of navigation in the spring. In the detail of their operations, the Directors stated that they have finished five locks and one guard lock, at Grand Kankana, the upper terminus of the Canal; the locks being of stone, faced with plank, with chambers, 160 by 40 feet. The entire line of the Canal, one and a half miles, at this point had been previously completed, and all that remains to admit boats drawing five feet water, is to finish and hang the gates. At little Chute, three locks have been built, and the canal completed, with the exception of 10,000 yards of excavation, which will be speedily finished. At Cedar Rapids, Grand Chute and Menasha, the work, though

not so far advanced, has made satisfactory progress.

The work done and paid for, since the organization of the Company, is as follows:

Grand Chute	$47,852 56
Cedar Rapids	8,665 80
Little Chute	60,403 57
Grand Kankana	42,650 91
Menasha	6,939 61
Total	$166,542 48

The cost of completing and putting in use these several improvements, is estimated by the Engineer, as follows:—

Grand Chute	$10,031 65
Cedar Rapids	901 85
Little Chute	7,583 68
Kankana	2,887 00
Menasha	10,884 65
Total	$32,388 83

The Directors say, that "the whole work is constructed of durable material, and for permanency and style of workmanship, will challenge comparison with any similar structure in the Union." Anticipating a large increase in the commerce of the lower Fox, from the early completion of the Improvement, and the consequent necessity for an increased tonnage, the company have expended $16,929 during the year in the construction of the necessary docks, warehouses, boats, and barges. They have ready for use two freight barges of 200 tons each, a freight propeller of 140 tons, a steamer of the largest size that can navigate the river, and a third barge on the stocks.

Notwithstanding the stringency of the money market, and the embarrassment of different sorts which surrounded the company, they have in fulfilment of their contract with the State, paid off $123,480 of the State indebtedness, leaving only $8,000 of outstanding warrants yet to be redeemed. The following abstract of the Treasurer's account for 1854, closes the report:—

RECEIPTS.

Sale of the Company's Bonds	$239,000 00
Sale of lands	18,123 04
Tolls and rents	882 58
Personal property	597 05
Bills payable	44,133 28
Back money to contractors	31,112 70
	$333,848 66

EXPENDITURES.

On work between Lake Winnebago and Green Bay	$177,084 01
State Indebtedness	123,480 81
Dredge boat expenses	3,697 83
Docks, warehouses, etc	16,922 42
Real Estate charges	303 00
Engineering, etc	4,287 36
Contingent Expenses	3,623 42
Interest on Bonds	4,449 71
	$333,848 66

Respectfully submitted,
M. L. MARTIN, } *Com. of Dir.*
U. H. PEAK, }

Green Bay, Dec. 20th, 1854.

We give the Company credit for having done a good year's work, and we hope that the Hon. M. L. Martin and his enterprising associates will reap liberal returns from the capital, time and labor they have so freely invested in this great improvement.—*Milwaukee Sentinel.*

ROCK RIVER VALLEY UNION RAILROAD.

We are assured by some of the parties in the management of the affairs of this railroad company, that the arrangements made for selling the road meets the views of, and is entirely satisfactory to the board of directors. The directors found it difficult to obtain a voluntary conversion of *all* bonds and debts into stock upon fair terms, and, therefore, united with the bondholders in requesting the sale of the road as the *only* mode practicable for freeing the company from its embarrassments. In this way *all* the bonds and *just* debts are converted into stock of the company, thereby fully complying with all the conditions of subscriptions recently made on the line of the road, and cutting off all *unjust* claims against the company, if any there are. The sale is to take place March 24.

The bondholders have appointed agents to buy the road, and instructed those agents, immediately after the sale, to issue new stock to all parties justly entitled thereto. This removes all encumbrances from the road, and clears the way for a vigorous prosecution of the work, so that we cannot doubt, with the substantial subscriptions already obtained, and others which will be readily added, this road will be pressed forward to completion at an early day.

No one, it seems to us, can doubt but stock in this road, when completed, must be as good paying stock as in any road in the whole west. As it is the agents of the bondholders who distribute the stock after the sale, and they are instructed to issue the new stock at par, dollar for dollar, for all just indebtedness, we are very sure that the smallest amount of stock will be issued, which will answer the demands of the strictest justice any honesty.

This plan of resuscitating the road strikes us as the best for the company and the country through which it passes, as it certainly is for all stockholders and creditors, that could be desired, while at the same time it is highly honorable on the part of the bondholders.

We look forward with great anxiety to the completion of the road, and look upon this as an important move in that direction.—*Zanesville Gazette.*

SAVANNAH AND GULF RAILROAD.

The following communication to the Savannah Journal of January 20, may be interesting to our readers, as indicating the feelings of the planters of large sections of the southern states, at present destitute of railroad facilities. Much of the south has heretofore moved slowly in the march of improvement; but our neighbors of the sunny clime are now more universally alive to the importance of facilitating commercial intercourse and travel, than we give them credit for:

We feel most sensibly that the occasion is unseasonable, the times are unpropitious for a great work of this character, but it has been commenced, and indeed progressed until it has acquired the confidence and favor of many who had looked upon it with distrust or jealousy; and we most fervently hope that it may not be fated to keep company with our "Brunswick bubble."

We must have a railroad. Our section of country has become too pleasant and dear to us for us all to quit it—and we can not enjoy its advantages without a road. It is true, money is scarce, but it will make labor much cheaper—cotton is low, but it makes the burthen of our freights and expenses fall the more heavily upon us. The prospects of the planter are gloomy ahead, but it satisfies many that their labor can be as well applied to railroads as to the cotton field. And your city has suffered greatly from the disasters of the past year, but this only makes it the more necessary that she should make the greater effort to regain her prosperity. And what can do more for her than the completion of a great work which will pour within her market all the produce of an extensive and fertile region, that heretofore has had no commercial connection with her. When you get to Thomasville, we will send you 150,000 bales of cotton or more, and will add nearly or quite *fifty per cent.* to the business of your city. Surely this is a prize worth contending for, even though it may require an extraordinary effort. And yet when this is gained, it is but the beginning—the glimmering morning of a glorious futuro for your city, and a bright day for us.—*Savannah Journal,*

LOCOMOTIVE WORKS.
NILES & CO.,
CONGRESS STREET, CINCINNATI,
BUILD to order Locomotives of any required size or plan, and are prepared to execute all orders in their line with promptness.

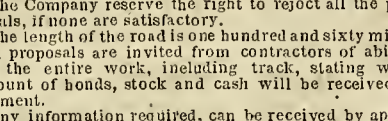
NOTICE TO CONTRACTORS.

Nashville & North-Western R. R.

PROPOSALS will be received at the Office of the Nashville and North-Western Railroad Company, for the Graduation and Masonry of said road, in sections of twenty or thirty miles.



The Company reserve the right to reject all the proposals, if none are satisfactory.

The length of the road is one hundred and sixty miles, and proposals are invited from contractors of ability for the entire work, including track, stating what amount of bonds, stock and cash will be received in payment.

Any information required, can be received by application to N. MACNEALE, *Chief Engineer.*

Nashville, Tenn., 25 Jan., 1855. febtolmy

Important to Railroad Companies, etc.

Leavitt's Railroad Frog-Points, Cast Steel Tools, etc.

THE undersigned, having discovered that cast steel, in a liquid state, can be moulded into any shape or form, are, by means of this valuable discovery, manufacturing

RAILROAD FROG-POINTS,

Lathe Mandrels, Guages

of every description for blacksmiths use; Steps for Mill Spindles and Shafting, Swage Hammers, and almost all the different variety of tools which are difficult to forge. Articles made in this manner, are much superior to forged productions, as the steel out of which they are manufactured, loses none of the carbonic element, but retains it in all its original purity, while under the repeated heats to which it is subjected by the old and tedious process, it loses much of this valuable property. They are also produced in a much more perfect state, needing little or no fitting or dressing, having all the accuracy of shape which moulded articles possess. They can, also, be furnished at one-half the cost of the others.

The qualities of the Frog points have been already tested by the Ohio and Mississippi Railroad Company, to whom the manufacturers are furnishing them through G. Recker & Co., Cincinnati.

Measures have been taken to secure a patent for this valuable invention. LEE & LEAVITT,
15 Walnut-st, Cin'ti.

N. B.—They would also call the attention of the public to their valuable and extensive assortment of cast steel saws, and circular saw mills, etc.

CINCINNATI STOCK SALES.

HEWSON & HOLMES,

Have constantly on hand and for sale at the Stock Board, Merchant's Exchange, and at private sale, Railroad, Bank, and Insurance Stock, and Railroad Bonds.

Regular sales at Stock Board on Wednesday and Saturday of each week.

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler		Massachusetts
John E. Thayer, Esq.		"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,		Sandusky.
E. F. Osborne, Esq.		Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$230
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honoluln.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7551, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the bands been moved, and to day it is 20 seconds only slow. Respectfully yours,
HENRY O. AMES,
Sup,t Cin. Ham.. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-0*

(On Baltimoro & Ohio Railroad, midway between Baltimore and the Ohio River.)

MANUFACTURERS of *Engine Lathes, Planing Machines, Drill Presses, Hand Lathes, and other Machinists Tools.* These tools are built in a superior manner, from the very best materials, and are particularly adapted for railroad shops and all others repairing first rate machinery. Our location is very advantageous for shipping work to the West or South. Orders and communications receive prompt attention. Address

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,
Christiana, Pa.
Or, to **CHRISTIAN UMBLE,**

TYLER DAVIDSON & CO.,
Agents for the
BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ½ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agent of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils, 10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Johnockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,

Railroad Printing.

WE have now attached to this office an extensive Composition and Press Room and Bindery, under the personal supervision of the proprietors of the Record. With confidence, therefore, we call the attention of Railroad Officers and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the Printing Business.

We are fully prepared to furnish Railroad and other Reports, with or without Maps or other Illustrations, gotten up at short notice and in superior style. Also, Blanks of any description, adapted to the wants of the various departments of the Railroad service, and to the wishes and tastes of the parties.

Also, Railroad Tickets and Conductors' Checks. Our patent Card Press, enables us to supply any demand at Short Notice and in Unequalled Style.

Also, Blank Books, ruled to any pattern, with or without Printed Headings, and bound in the most substantial manner.

With the numerous facilities for doing the Best Work, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,
Railroad Record Office, 167 Walnut st Cin.

TO RAILROADS AND CONTRACTORS.

Horse Powers.—The undersigned being agents for the sale of R. H. Peaso formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

GAS.

Aubin's Patent.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

T. WRIGHTSON & CO.,
167 Walnut-st., Cin'ti.

RAILROAD MAP.

WE have now ready A Railroad Map of the West, containing all the Railroads constructing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a competent hand.

The size of the sheet is 24 by 38 inches, and can be sent by mail.

Price—plain..... 40 cents.
Colored in outlines..... 50 cents.
Full colored ..... 75 cents.

Liberal discounts will be paid to those wishing them in quantities.

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to U. P. James will secure prompt attention

ENGINEERING!!

The undersigned is prepared to furnish SPECIFICATIONS, ESTIMATES, AND PLANS,

In general or detail of all kinds of

Steam Vessels, Engines, Boilers, Mill Work, &c

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received great favor as a passenger road.

The late completion of the Central Ohio Railroad, from Columbus to Bellaire on the Ohio, 4 miles below Wheeling, affords a direct rail connection with the entire West.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Indianapolis, St. Louis Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to

WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transport. and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Baltimore Steamship Co., and the Merchants and Miner's Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

WM. G. HARRISON, President. *JOHN H. DONE*, Mast. of Transportation, Baltimore.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to.this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

THE CULTURE—CROPS, AND PROFITS OF THE VINE IN THE U. STATES, EUROPE, AND ROME.

This subject is not precisely in the line of a Railroad paper; yet, in one sense it is. Since it is now established, that railways are hereafter to carry the great mass of freights in the country, all the crops of the country become of interest to them. We shall take this subject up, in detail, which will lead us to discuss the entire agriculture of the country; and we may as well begin with a new, though it be a comparatively small article of traffic. Since Noah became a husbandman and cultivated a vineyard, the vine has been one of the staple articles of agriculture. In the United States, it has only recently commenced, as an article of commercial traffic. But, there is no reason to doubt, that the cultivation of the vine will increase with immense rapidity, and that the time is not far distant, when it will be one of the staple articles of American production. Hence, it is well to look at its probable results, in the beginning.

1. Of Climate.—The first question which arises is, under what circumstances of soil, and climate does the vine grow best?

In Europe the cultivation of the vine is confined to the district within the parallel of Lisbon 38° 42′ (Sea board), and Titiacon (Caspian Sea), 46° 20′ making a *range of eight degrees*. But, it must be observed, that there are large districts within this range, where the vine will not grow. These are the elevated and exposed plains of the interiur. In Asia and Africa, the vine limit runs further south, to about 30°, but hardly as far north, making in all about twelve degrees of latitude.

In the United States, the vine limits are El Paso, in New Mexico, latitude 32°, and Ann Arbur (Michigan), 42°, making a *geographical zone of about ten degrees*. But, it must be remembered, that there are large districts, within the limits, which, on account of either the humidity of the climate, or the height of the land, will not bear vines, as a staple crop. Indeed, it may be laid down as an important fact, in agriculture, that the district of country *within which the vine will grow as a staple, profitable crop, is a narrow one.*

The grape to make good wine, *requires a mean temperature* of at least 67°, in summer. Hence the grape will not make wine to profit, north of Cleveland, and as the northern half of Ohio, Indiana, and Illinois is un a high plain, swept over by Lake winds, it is not at all probable, that wine can be made profitably north of the centre of these states. So, also, the vine will not make good wine in a very hot, or humid climate. The cultivation of the vine for wine, is, therefore, confined to a small district, and in the U. States, that district will probably be found chiefly in the Vallies of the Ohio and the Missouri.

2. Progress of Vine Culture in the U. States.—We have just begun the culture of the vine, as a staple plant. But, there are indications that we shall progress pretty rapidly. The quantity of wine made in the U. States, according to the two last censuses, was as follows, viz:—

In 1840	124,733 gallons.
In 1850	219,101 "
Increase	80 per cent.

The comparison in the following States, shows that already it is proved, that vines cannot be *profitably* cultivated in some States, where it was attempted.

	1840.	1850.
Pennsylvania	14,328 gallons.	25,990 gallons.
Maryland	7,855 "	1,431 "
New Jersey	9,416 "	1,811 "
N. Carolina	28,752 "	11,958 "
Indiana	10,265 "	14,055 "
Illinois	474 "	2,997 "
Kentucky	2,209 "	8,093 "
Missouri	92 "	10,533 "
Ohio	11,524 "	48,207 "
Virginia	13,911 "	5,408 "

This table shows the important fact, *that the culture of the grape is losing ground in the Atlantic States, and progressing with great rapidity in the Vallies of the Ohio and Missouri.* Thus, the five States of New Jersey, Pennsylvania, Maryland, N. Carolina, and Virginia, give the following aggregates:

In 1840	74,264 gallons,
In 1850	44,998 "

This is a decided falling off; but the five States in the Vallies of the Ohio and Missouri, provo the following aggregates:

In 1840	23,194 gallons.
In 1850	83,935 "

This shows an increase of 330 per cent.; but, if compared with the present time would present an immense advance. There are now about 1,500 acres of bearing Vineyards in the Ohio Valley, immediately adjacent to Cincinnati. These will average 300 gallons to an acre—making 450,000 Gallons. In 1853, the vine *crop of the Ohio Valley was six-fold that of* 1849.

An attention to *localities* will show whereto American grape culture is tending. Thus, in 1840, two-thirds the wine made in Ohio, was made in Richland County; but, in 1850, four-fifths the whole was made in Hamilton, Butler, and Clermont Counties, in the vicinity of Cincinnati.

In Kentucky, most of the wine is made in the vicinity of Louisville, and Covington; in Indiana, in the vicinity of Lawrenceburg and Jeffersonville, (opposite Louisville). These places are all in the space of 100 miles on the Ohio river. It will not be easy to predict accurately the result of wine progress in this district; but, it may safely be assumed, that in 1860, the wine manufactured in the Ohio Valley, will count by millions of gallons.

3. Product and Profit in Europe.—The following are the number of acres, and products in wine, of the Vineyards of France, Austria, Spain, and Portugal, as given in 1828:—

	Acres.	Gallons.
France	6,500,000	770,000,000
Spain	1,500,000	144,000,000
Portugal	375,000	24,786,000
Austria	4,172,500	635,994,000
Aggregate	72,537,500	1,574,080,000
Average product per acre		131 gallons

According to a long series of experiments made in France, the profits, after deducting all charges, amounted to only five per cent. on the capital employed. The total amount of capital employed, was estimated at $2,000 per acre. This includes not only the land and the vineyards, but the permanent labor, machinery, etc. On this capital the nett proceeds were only about $100 per annum. Columella made out the *profits* of an acre of land in vineyards, near Rome, to be 20 per cent.; but it is probable he estimated the capital at too small a sum.

4. Product and Profit of the Vine in the U. States.—Let us now turn to what can be made out of the vine in this country. One of the most experienced and successful cultivators of the vine here is Mr. Robert Buchanan, who has published a small treatise on the subject, which should be in the hands of every one, who intends raising the vine.

The cost of getting a vineyard thoroughly planted and bearing a full crop, at Cincinnati, is thus stated by Mr. Buchanan. He does not give the price of land. But, we may add, that at from fifteen to forty miles from the city, near railways, and in all respects convenient to market, the land may be had at $50 per acre. Mr. Buchanan's vineyard was six acres, and everything being paid for in money, the result is as follows:

Price of six acres	$300 00
Trenching two feet deep	390 00
Cuttings, sodding, and planting	265 00
Cutting and setting 14,500 hickory stakes	490 00
Cost of attending the first year, Vine dresser and hands	231 00
Second year	256 00
Haulings, cuttings, contingencies, etc	238 00
Interest on capital for two years	180 00
Six acres	$2,270 00
Actual capital per acre	378 33

This agrees so nearly with the estimates of several other persons, that it may be relied on as sufficiently accurate for a person who

wishes to plant a vineyard with a view to profit.

The *products* may be known, very nearly, by the table of observations kept by Mr. Buchanan, and which is thus :

In 1848	2	acres	530 gallons.
In 1849	3½	"	935 "
In 1850	3½	"	1,638 "
In 1851	4	"	630 "
In 1853	6	"	5,040 "
In 1854	6	"	845 "

In the year 1851, the frost cut off two-thirds the buds. In 1854, the drought was the great enemy. The averages were as follows :—

In 1848-'49	270 gallons.
In 1850-'51	300 "
In 1853-'54	485 "

The general *average* of the above, gives a small fraction under 400 gallons per acre. The result of other experiments correspond so nearly with this, that the cultivator may rely with much certainty on 400 gallons per acre, in a series of two years, *provided the vineyard is well planted and well cultivated.*

What *profit* will this produce? The following is the cost of production :—

Interest at 7 per cent. on $378 per acre, a Vineyard of six acres, as above	$158 90
Cost of attendance and culture	360 00
Taxes	10 00
Cost of making wine	150 00
Contingencies for machinery, tools, etc.	50 00
Cost of Crop	$828 90
Average product	2,400 gallons.
Average price	$2,400 00
Nett profit	1,572 10
Profit in investment, when wine is $1 per gallon	70 per cent.
At 75 cents per gallon	40 "
At 50 " " "	16 "

It thus appears, that while the vine is, as it now is in this region, unaffected by any great increase of insects, parasites, or other causes of blight, the grape may here be cultivated at a large profit, even when the wine is reduced to 50 cents per gallon. But, such is the demand for pure Catawba Wine, and such is the consumption of wine in the country, that it is safe to say, that in full thirty years to come, wine cannot be reduced to 50 cents a gallon. In all that time, the good cultivators must realize heavy profits. It is true, that now and then, as in the drought of 1854, there will be a failure almost of the grape; but the heavy crop of another year will more than bring up the average.

There must be *five millions of acres planted in vines, before the price can be reduced to a minimum in the U. States!* This fact is enough to ensure cultivators against any hazard of an overstocked market. There will probably be 600,000 gallons of Catawba wine raised in the Ohio Valley, in 1855; but this is nothing to the demand. If it were doubled (which cannot be), every year for five years to come, the market would not be overstocked.

Communications.

EDITORS RAILROAD RECORD :—At the time I became a subscriber to your journal, I felt much interest in the then contemplated railroad from Vincennes to Paducah, principally, if not wholly, in consequence of the many assurances given by some of the Directors, that Carmi, the County seat of White County, and a centre of much trade, in surplus produce, would, beyond a contingency, be made a point on the road; we are now given to understand that such will not be the fact, provided there can be found a suitable crossing below the town.

Now, I hold there are many important reasons why the road should cross the Little Wabash at Carmi, a few of the most prominent I will mention, there are multitudes of others. In the first place, both banks of the river, at the Mills, are above the highest floods ever known, the river bed, a good, nearly level, rock bottom. Materials for abutments, piers, and superstructure, on the spot, or in the immediate vicinity; never failing soft water, eight or nine feet nearer the road-bed, than at any other point on the river; also, being nearly midway between Vincennes and Paducah, makes it a desirable station for the up and down trains to pass each other, as also to obtain refreshments and other necessaries. Another consideration may be mentioned, that I think transcends all others, viz : the *people*, the *bone* and *sinew* of the country, and for whose benefit alone the road should be built, are unanimous to a man in favor of locating the road by Carmi.

Now if all these considerations, and many more might be added, are to be sacrificed, merely to shorten the road one-third of a mile, otherwise one minute in time. I am ready to own that I shall lose all interest in Western Railroads. * * * *

The above is from one of the subscribers of our *Record*, living in the east. We are not prepared to speak "by authority" in this matter, and hope that some officer of the road will favor us with the facts and reasons, if there are any for the change of location.

STATE DIRECTORS. — Governor Johnson has appointed the following named gentlemen Directors, on the part of the State in the East Tennessee and Georgia Railroad Company for the current year :

J. G. M. Ramsey, Knox County; John Jarnagan, Anderson; James A. Coffin, Monroe; Wm. Lenoir, Roane; Thomas Rogers, Geo. W. Bridges, McMinn; R. M. Edwards, D. C. Kenner, Bradley; J. A. Whitesides, Chattanooga.

Railroads.

REPORT OF THE INDIANAPOLIS AND PERU RAILROAD.

Our readers will remember that in September, 1853, the Board of Directors of this Company entered into an arrangement with the Board of Directors of the Madison and Indianapolis Railroad Company for the consolidation of the stock of the two companies, to take effect January the 1st, 1854. Under this arrangement the consolidated Company assumed the name of the Madison, Indianapolis, and Peru Railroad Company, and managed and controlled the affairs of both roads as one united organization. This arrangement was not concurred in by the stockholders of the Indianapolis and Peru Company, the Directors having never submitted it to their decision, and much dissatisfaction resulted from the action of the directory. Many of the stockholders of the Company are men of moderate means, living along the line of the road, whose principal object in taking stock was to secure its completion. These parties were always opposed to the consolidation.

On September 4th, 1854, an application was made in behalf of a large portion of the stockholders controlling a majority of the stock to the Marion Circuit Court, for an injunction against the consolidation, to restrain the consolidated Company from further managing the road. The injunction was granted, and the present directory have since then controlled and managed the road. The suit for the final decree of separation is still pending, and will, probably, be decided at the next term of the Circuit Court.

The Directors state that it is now believed that all parties consider a separation inevitable, and in view of that result they are making preparation for a full adjustment of all the unsettled accounts between the two companies.

With reference to the reports of the Secretary and Superintendent, the President says, they show the affairs of the Company to be in a much more healthy and prosperous state than was anticipated, and they have every reason to conclude that an increase of business at the rate of twenty per cent. per annum will be realized. During the short time the present Board have had the management of affairs, they have paid in real estate $38,930 49 of the floating debt, realizing at the same time full cost for the property, and they hope to pay a large proportion of the remainder in the same way.

From the Secretary's report, we learn that the—

Capital Stock of the Company is	$800,000 00
Less amount hypothecated for county bonds, for which no dividends are to be declared.	50,000 00
	$750,000 00

INDEBTEDNESS.

Six per cent. Bonds issued August 1st, 1850, due in ten years	$ 12,000 00
Seven per cent. Bonds dated July 1st, 1852, due July 1st, 1864	600,000 00
County Bonds dated Sept. 1st, 1851, due Sept. 1st, 1861, interest at ten per cent., payable annually	50,000 00
	$662,000 00

RESOURCES.

Real estate on books unsold	354,194 90
Excess of funded debt over real estate	$307,805 10

FLOATING DEBT.

Bills payable	$72,698 70
Estimated amount due contractors	25,000 00
" " of other debts	30,000 00
	$127,698 70

RESOURCES.

Bills receivable, notes uncollected	92,514 13
Excess of floating debt	$ 35,184 57
Excess of funded debt	307,805 10
Total excess of debt	$342,989 67

The indebtedness of the Company above the means provided for its liquidation, will thus be seen to be less than half its capital stock. The receipts of the Company from Sept. 4th, 1854, to January 1st, 1855, from real estate, bills receivable, rents, passengers, etc., were $95,456 59.

The expenditures for repairs, running account, etc., were	$15,466 86
Rolling stock	3,158 66
Interest	26,625 19
Debts contracted previous and during consolidation	4,698 69
Paid Indiana and Bellefontaine Railroad Co. for rolling stock purchased in 1853	37,746 82
Amount due from other roads and Post Office Department	2,512 41
Cash in hands of treasurer and agents	5,248 58
	$95,466 59

From the Superintendent's report, we learn that the total earnings of the road for 102 days, were - - - - - $50,782 66

Expenses for running and maintaining repairs, were - - - - - $22,963 73

The expenses will thus be seen to be 45 per cent. of the earnings, but as there are items included in expenses for extraordinary repairs and hire of machinery amounting to $4,500, it will be safe to estimate the expenses proper at 40 per cent. of the earnings. This would leave, after deducting interest, etc., a sum applicable to dividends equal to 6 per cent. on the capital stock of the Company.

There are in progress and approaching complotion, the Wabash Valley Railroad to be finished to Peru in the early part of the summer, connecting Peru and Toledo; the Newcastle and Logansport Railroad between Logansport and Kokomo, where it intersects the Peru and Indianapolis road; and the Peru and Laport Railroad, opening a route to Chicago and the North-west.

The length of the Peru and Indianapolis Railroad is 73 miles, 22 of which is laid with flat bar and 51 with T rail; 35 miles of the portion laid with T rail is partially ballasted, and 16 miles are upon sub-grade. The 22 miles laid with flat bar have cost as much to keep in repair, as the balance of the road. It is important that this portion should be relaid as early as possible with T rail. When this is done and the road thoroughly ballasted, it will be in condition to compare favorably with any road in the State.

SLAVE LABOR ON SOUTHERN RAILROADS.

The many necessary roads which have been projected in the southern States, and the difficulty of obtaining good laborers, is beginning to turn the attention of planters to the propriety of employing slave labor in the building of their roads. We extract the following data from the interesting report of Thos. F. Drayton, President of the Charleston and Savannah Railroad:—

"I will now undertake to show that this labor is the kind which we should use at the South, because it is cheaper, can be kept under better discipline, worked both in summer and winter, and the planter be relieved from annoyances which always accompany the introduction among our plantations of contractors with hireling white labor from the North and foreign parts.

We will first compare the cost of labor to a company owning slaves, and a contractor who hires them. The usual hire of a prime negro man in the country, to work upon railroads, is about 180 dollars per annum. If the company would purchase slaves at the present price, say $1000, the annual expense compared with the hired slave, will be about as follows:

Interest on $1,000 at 7 per cent. per annum	$70
Insurance on life at 2½ per cent	25—$95

which is a fraction more than half the sum paid for a hired hand.

I will again assume that the negro costs $1,000, and show how much cheaper he can work, when we will come to grading and excavating.

Interest on $1,000 at 7 per cent. per annum	$70 00
Insurance	25 00
Clothing	20 00
Bacon	15 00
Corn, Molasses and Tobacco	15 00
Overseeing each hand per annum	10 00
Tools, including blacksmiths and carpenters work	15 00
Doctor's fees, each hand per annum	1 00
Total expense of a slave owned by the Company per annum	$171 00

In excavating earth on railroads in the Low Country, 12 cubic yards may be assumed as an average day's work. Allowing 275 working days to a year, a negro will excavate 3,300 cubic yards. Then divide $171 by 3,300, and you have five and one-half cents as the expense of excavating one cubic yard. The price paid to contractors varies from 15 16 cents per cubic yard, demonstrating that, slaves owned by the Company can excavate earth for one-third less than the usual contract price.

Where a Company with limited means is compelled to make its engagements with its contractors at one-half in cash, and the remainder in the bonds and stock of the Company, the price paid for excavation is 25 cents per cubic yard, thus making the saving to a Company owning its own slaves, still more advantageous than stated above. It may be said that white labor can perform more and better work per diem, than the slave can, and therefore the contractor can afford to give him higher wages, and still make as high if not higher profits, than by hiring slaves. If this is so, it is contrary to my experience, for I have tried both together, several years. After the negro has had a few months practice with the spade, and learned how to use it, he can dig or ditch in our clay bottoms as much as any other man, and equally as well. In making this assertion, I am by no means singular.

In excavating rock, the experience in Virginia is decidedly favorable to the bought negro. In this kind of work, as much as $600 per annum has been made there to the hand. A smart negro will learn the trade of a mason or bricklayer in less than twelve months, and can construct culverts, bridges, abutments, locks and dams, at *one seventh* that the same kind of work will cost at contract prices. More than three-fourths of the laborers on the James River and Kanawha Canal in 1853, were slaves.

Other contractors in Virginia have from 300 to 500 slaves laboring together upon the public works, the larger the number in the gang, so much the more profitable. I mention this fact, because it is sometimes stated that slaves in large bodies cannot be worked advantageously.

To do this, however, successfully in large numbers, they must be divided into gangs of 25 or 30, with an overseer, and the requisite cooks, and mechanics for the repair and mending of carts, wagons, tools, etc., and Engineers to supervise the work of the Overseers.

In our own State, we have also striking illustrations, how easily and cheaply railroads may built be with Slave labor.

On the Cheraw and Darlington Railroad, the whole line of 38 miles has been graded, including the wooden superstructure, by the planters on or near the line, without involving a cash expenditure by the Company exceeding six thousand dollars.

On the Wilmington and Manchester Railroad, one planter has worked out with his slaves, $30,000 in the stock of the road. Others have done the same to a smaller amount. Others, again, have taken contracts at 1-3 cash, 2-3 in slave labor. All these contracts have proved in a greater or less degree, profitable to the parties, and I have been told that many would be willing to take contracts again upon the same terms, instead of resuming their former plantation pursuits.

In North Carolina, the upper portion of our own State, and Georgia, many roads have been begun, and finished principally upon the plan pursued by the Wilmington and Manchester road, all tending to prove what peculiar facilities we in the south possess for building and providing for Railroads, upon the most economical system of construction."

There is a point in these suggestions that we like, it is the tone of interest and independence that characterises the people on the line of the road. They each have a peculiar and personal interest in its completion, and they manifest by actual labor and enterprise, that they appreciate its importance to them. This is as it should be; no one has so much at stake, or is to derive so much benefit from a railroad, as the person through whose possessions it runs; and no one can operate on that road to as great advantage to himself and the company, as the resident landholder. He is there in person, and has more inducements to diligence and faithfulness, than to take care of the pittance in stock which he may receive as part pay for his labor. We like, too, the independent tone of feeling which prompts men never to entrust to others what they can do for themselves. There is time and labor enough wasted among the residents along the line of every road in the country to more than build the road if judiciously applied; and it is the judicious and systematic employment of a *people's time* that alone can secure and maintain wealth or even competence.

But there is a suggestion which we would like to make to our southern friends; they should not *wholly* neglect their agricultural interests, not even for the important purpose of building their all-important railroads. The completed railroads will add largely to the value of their products, but those crops must be produced or nothing will be gained by the road. The cultivation of the soil is the source of wealth, and the railroad only the means to make that wealth available. Hence it will be well for the planter to remember, that while in building a railroad he is benefitting himself and his posterity; yet, he must at the same time provide the means of subsistence for his household. And if he rightly manages his time, and that of his servants, he will have ample opportunity to cultivate his fields and do much for the improvements progressing around him.

AUSTRALIA.

The impetus given to immigration into this colony, by the discovery of the gold fields, is creating a necessity for railroad communication, and accordingly a gigantic project has been proposed there. It is designed to construct a railroad 1,000 miles in length, to connect the three colonies of South Australia, Victoria, and Sydney.

The plan, as detailed by Sir Henry Young, the Governor of South Australia, is that the necessary capital, which is estimated at £10,000,000, should be raised by a loan, the interest of which should be provided for by votes of the three colonies, and guaranteed at the same time by the Imperial Government, and that the lands for ten miles on both sides of the line, amounting to 12,800,000 acres, should be placed under the administration of commissioners, with a view of being gradually realised, one-half of their proceeds to be applied to redeem the loan, and the other for introducing labor.

SECOND VOLUME OF THE RECORD,

This being the close of the second volume of the *Record*, our subscribers who may wish to bind their numbers, will find a title page and index. The index is inserted in such a manner, that the binder can readily cut it out and insert it in its proper place.

We have but few copies of the *Record* which we can bind, it is therefore desirable that those who may wish bound copies should give us early notice.

We have yet remaining a few copies of the first volume, bound in our usual style.

MAYSVILLE AND LEXINGTON RAILROAD.

We learn that the President and Agent of the bondholders of this Company have recently passed over this road to ascertain the exact condition of the work, and to devise some plan to resuscitate and complete the enterprise.

The result of the examination has been a proposition on the part of bondholders, the substance of which we extract from the Carlisle Ledger:

"The amount of the bonds held by these parties is $500,000, the payment of which is secured by a mortgage upon the road. A suit is now pending to foreclose the mortgage and sell the road to pay the debt. Now it is proposed by the bondholders that a decree be rendered directing the sale of the road, and we suppose the bondholders are to become the purchasers. At any rate, whatever parties are to become the purchasers of the road, they are as a new company to issue bonds payable at some future day, bearing interest at six per cent. to the amount of $700,000, (the amount which it is estimated it will take to complete the road,) of which bonds the present bondholders propose to take one-half, and advance the money upon them. The balance of the $700,000 to be raised upon the remaining half of the bonds, by advancement upon them by individuals. Or, in other words, it is proposed to obtain loans from individuals amounting to $350,000, the new company to execute bonds to such individuals thus advancing the money, for the amounts by them severally advanced, bearing interest at six percentum. This arrangement, if carried out, will of course sink all the stock already paid in by individuals, cities and counties, and the cost of the road to the new company will be the price at which it is purchased under the contemplated sale, and $700,000 raised upon the bonds of the new company."

CINCINNATI STOCK SALES.

Monetary and Commercial.

We have no very striking feature to notice in the week that has just passed. Business in general is returning to its legitimate channels, but in a slow and gradual manner. Improvements that are noticed may, therefore, be expected to be permanent; but our readers would do well to remember that every improvement must be exceedingly gradual, and in no respect as rapid and as soon perceived, as the downward tendency of a panic.

There is an increased demand for money, due in some measure to a partial resumption of navigation. First class paper, however, is discounted at easy rates.

Eastern exchange continues as at previous quotations ½ to ¾ per cent. premium. New Orleans ½ to 1 per cent.

At the east we notice a continuance of easy money markets, for strictly first class names at rates varying from 5 to 9 per cent.

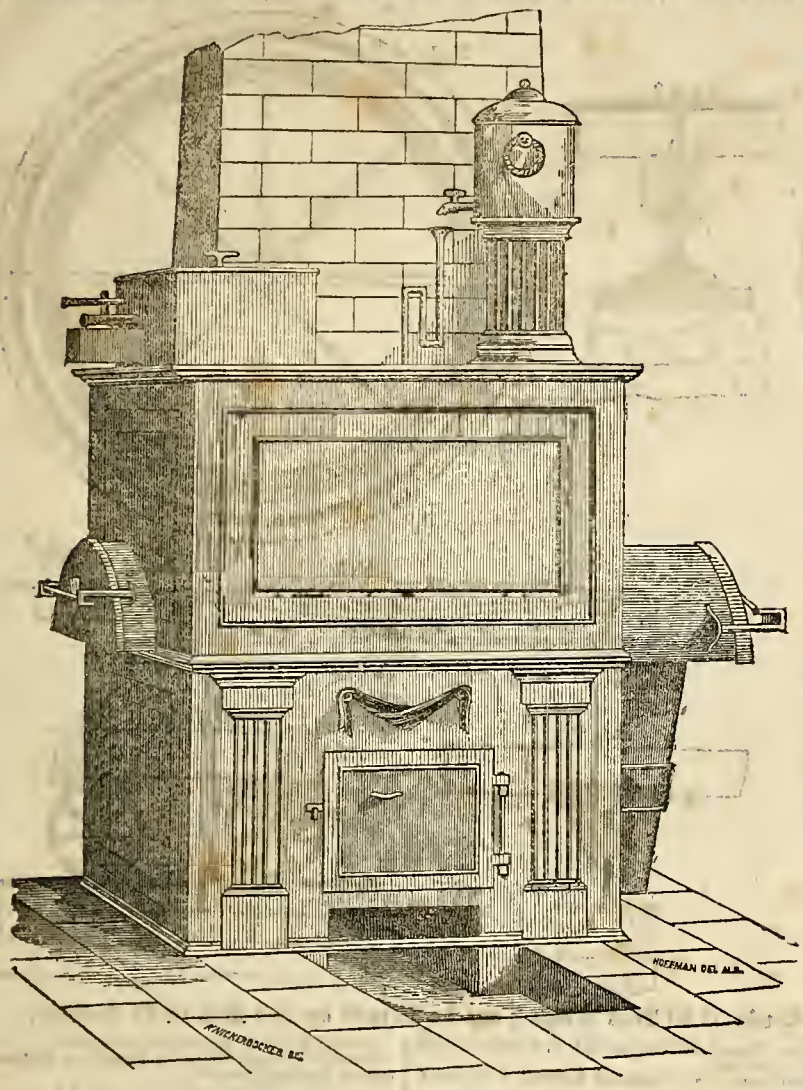
Exchange on London is quoted at 108¾ to 109½.

The Stock market has not been so active during this week as the preceding. Prices, however, tend upward.

Messrs. Page & Bacon have resumed payment. They request all holders of drafts, notes, etc., to present them at the Bank of America, where they will be paid with interest and cost of protest. We congratulate this firm and the West on this termination of their difficulties. It proves how strong was the feeling of confidence in their integrity and soundness.

LOCOMOTIVE WORKS.

NILES & CO.,



CONGRESS STREET, CINCINNATI,

BUILD to order Locomotives of any required size or plan, and are prepared to execute all orders in their line with promptness.

Orders solicited for iron and Brass Castings, Flue and Cylinder Boilers, Tyres, Tyre Lathes, Planing Machines, and other tools, Shafting, &c., &c.

feb. 13, 1855-6m.

ap.12 Office 62 East Second Street.

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

J. DAVENPORT.... M. D. WELLMAN.... C. M. RUSSELL

DAVENPORT, RUSSEL & CO.,

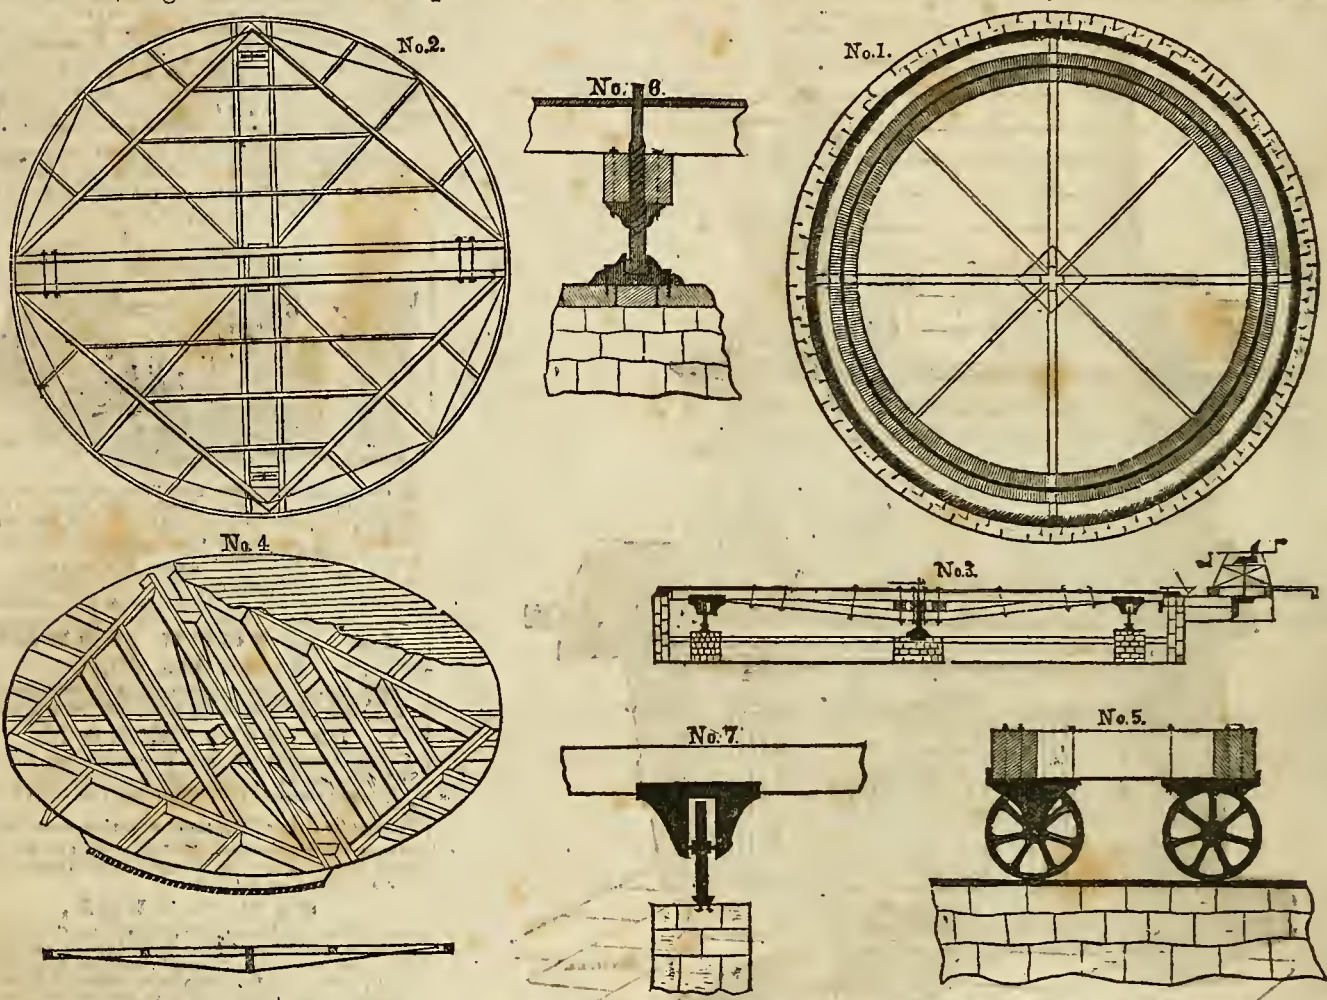
Railway Car Manufacturers,

MASSILON, OHIO.

THE subscriber, late of the firm of Davenport, Bridges & Co., Fitchburgh, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident that perfect satisfaction can be given in all work entrusted to our care.

We have now on hand the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States.



Feb. 16†* JOSEPH DAVENPORT.

RAILROAD IRON, LIGHT WEIGHT.

470 TONS, 47 lbs. per yard, good quality and patterns, now lying at New Orleans. For terms apply to VOSE, PERKINS & CO.,
ap27-1f New York

CARHART'S IMPROVED TURNTABLE.

Now building for 13 of the Principal Roads in Ohio, Indiana, New York, New Jersey, and North Carolina.

This Table, together with an Engine and Tender of 30 Tons Weight, can be Turned by One Man in 25 Seconds.

RAILROAD COMPANIES in want of *Turntables* of a permanent and durable character, at a low price, are respectfully referred to the annexed references. The undersigned being confident that the manner of turning engines by his Table is the most permanent, expeditious, and cheapest in the United States, solicits the attention of Engineers, and others, to his improvement. The undersigned being a practical mechanic, and having devoted his time, for the past five years, exclusively to the construction of Turn and Transfer Tables, Draw and other Bridges, is prepared with every facility for executing orders in that line with promptness and satisfaction.

The price, which is always based upon the use of the best materials and best workmanship which can be procured in the market where used, can be determined only by the locality.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

For further particulars please address,

D. M. CARHART, Cleveland, Ohio.

MATHEMATICAL INSTRUMENTS.

"GARDNER'S ROCK DRILL."

DESIGNED for Mining, Tunneling, Quarrying Use, and Rock Excavations of all descriptions, by the use of which a saving of 50 to 75 per cent. is made. This drill can be operated by hand, horse, or steam power, and works equally as well horizontally or at any angle, as perpendicularly.

A silver medal, the highest prize, was awarded these Machines at the World's Fair

Applications for Territorial Rights and Machines must be made to the Patentee.

G. ARTHUR GARDNER,
Trinity Building, N. York.
